Amateur radio is not a productive use of my time. That is one of it's best qualities.

The only problem from my point of view was passing code, and that I have overcome. I no longer have a problem, except from your point of view.

St Paul experienced an epiphany on the road to Damascus, so we are told. However, although we are both in the Amateur Radio Service, of the two of us only you are in the Morse Code Religion. My 'problem', which is no problem for me, is only that I have not seen the light.

I might have thought that when I first read his response, but decided to be a little more controlled in my written response (knowing full well that others would come to that conclusion on their own).

> All Dwight said was that "your words reek of bigotry, elitism, and
> discrimination against other Americans."

Now, I didn't specifically say Larry's words reeked of anything. What I said is the words I hear from many advocating the continuation of the code testing requirement often reek of bigotry, elitism, and discrimination against other Americans. Of course, some of Larry's past comments certainly might fit into that category, but he has since somewhat toned down his rhetoric.

> If YOU want to TRULY support personal initiative without
> "government support" (and all its 'evil' socialist-like things) then
> you should be able to eliminate the federal code test!
>
> Except you do NOT. You keep demanding that the government
> continue the federal code test in order to keep a few code users
> around...

I've discussed that contradiction with Larry before. He does seem to exclude code testing from his conservative views opposing excessive government regulation. If Morse Code has real value, it should be able to survive in as close to a free market environment as possible. I think it has that value and can survive just fine without a regulation mandating testing.

> The FCC regulates and licenses ALL civil radio in the USA...
> yet none of the staff nor commission of the FCC are required to
> pass any morse code test in order to regulate US amateur radio.

Of course, that should be obvious. But Larry's position benefits him more - if accepted, it would undermine all those with different views on this subject. Clearly, only those with views similar to his would accept such a premise.

> You seem dumb and dumberer to the fact that every other radio
> service (except a small part of maritime radio) in the USA has either
> DROPPED morse code (snip)

Actually, as you may know, even the International Maritime Organization (IMO) voted in 1998 to eliminate Morse Code. The Coast Guard itself dropped

code in 1995. As a result of these two events, the Coast Guard now urges commercial vessels not to use code since CG personnel, and an increasing number of radio operators in the maritime service, may no longer have the skills necessary to communicate using that system. The UN-chartered IMO is responsible for defining and regulating international maritime telecommunications. It's positions are adopted by the ITU.

Good grief, Len. You sound like a tour guide. Actually, we lived in Tacoma for about four years (mid-70's) before heading overseas to Germany and lived in Bremerton for about a year and a half just a few years ago. I've drove across that bridge many, many, times. When we lived in Tacoma, we used to walk our dog on the beach under the bridge occasionally (on the side opposite Tacoma - a fairly popular spot for nude and topless sunbathers at that time). We used to park at the observation point on that side of the bridge (there was a plaque there with much of the information you gave above).

The bridge was much more interesting in the mid-70's. At that time, the side walls were cross-crossed metal strips allowing for a fairly unobstructed view of the surrounding area and water below. In addition, the roadway surface was open grating, allowing one to look straight down to the water directly below the bridge. Today, the side walls are solid steel plates and the roadway grating has been replaced with asphalt.

Alun, a defeatist attitude only condemns one to failure. Have
confidence in yourself - look at the things that you have done in your
life - if you had not tried, where would you be now? Maybe you will
try and fail - but to never try is to fail anyway....

No one says that you have to be an expert at everything - competent is
good enough!

Me too - good enough to pass the required exam, but that's about it!
But, passing the exam was the goal (as required by law - the "price of
admission" to HF) - and I achieved that 100 percent! (with my 10
percent morse skills, which may never be used again - they served
their purpose! God rest my morse skills.)

No, but I do strive to achieve those goals that I set for myself. If I fail, then fine, if I know that I put in the best effort that I could, I'll accept it - but that doesn't happen often. I suspect that, if you do a quick review of your past goals and achievements, you'll come up with a similar success rate.....

>condition for admission into a hobby???

Fine qualities for anyone, actually (my posting had nothing at all to do with the admission requirements into this or any other hobby, simply the innate ability of people to accomplish whatever they set their minds to. (Based on their abilities, of course - reality check time). For example, I'm sure that you have developed the self discipline to do what needs to be done in your life, even if occasionally difficult or distasteful, haven't you? Therein lies the meaning of the quote. Failures always have an excuse why they couldn't get things completed.

A failure usually engineers their own fate. In my career as a manager, I have never considered anyone who gave something their best shot to have failed! The mark of a true loser is someone who gives up before he tries.....and has a dozen reasons why it wouldn't have been possible anyway......

Be Well,

Charles:

No matter which spin you place on it, this newsgroup exists for a specific
purpose -- to be a venue for the hotly contentious code/no-code (test)
debate. Whether we were "run off" of rec.radio.amateur and rec.radio.
amateur.misc is irrelevant…we're here now, and we're here to stay!

>I like hearing the story about the code/no-code discussion was chased off to
>a lesser venue, and believe it is 'way past time for this to happen again.

Sorry about your luck, Charlie, but that's not gonna happen.

Go ahead, be my guest. It's been done before, and it'll be done again, but
it will always have the same effect: None. We'll still be here.

>Everybody already knows how ignorant the code/no-code debate is, but I'll go
>ahead and point that out every now and then, as well.

You know, Charlie, I'm not even going to disagree with that. I was sucked into this debate merely because I saw NCTA's making flagrantly irrational and illogical accusations against those of us who simply saw a reasonable licensing requirement and made the effort to meet it and succeed in doing so. So, yes, this debate is ignorant. But only because it was started through the ignorance of the NCTA.

>Anybody else want to join NCNCI ? (No Code/No-Code International, of

Now comes Brian:

>Assumptions can always be made. That's what makes them assumptions.

Brian:

Just because assumptions can always be made, doesn't mean that
we aren't making the correct ones.

>> The jerks who show up her complaining about the code test requrement and
>> blaming all us who just did it, without complaining.

>And? Finish the thought.

That thought is complete. It was the NCTA that started this debate, and
turned it into the slugfest it became when they blamed just about everything
bad in this world on those of us hams who were able to learn the Morse
code and pass tests at strictly amateur-level speeds. The code testing
requirements had always been reasonable and were proven to be
achievable by people from all walks of life, even those with severe
communicative disabilities. However, the NCTA, in their need to make
the attempt to prove the code tests to be unreasonable and somehow
irrelevant, were the FIRST ones to resort to the empty rhetoric, negativity,
and name-calling with which we have all had to contend.

>> That in so doing
>> learned that Morse code does indeed add substantially to ham radio, to the
>> point that we believe code testing has a permanent place in ham radio, is
>> just so much nonsense to them. They already know all about it.
>>
>Yet there are those of us who don't believe as you do. We are
>constantly attacked.

Incorrect. It is the NCTA's to began the "attacks." In one of my earliest
postings on Fidonet over a decade ago, one of the NCTA replies accused
me of "ethnic cleansing" because I dared to agree with the present code
testing requirements. I surely didn't start out with the notion of making
such rash statements, but I certainly wasn't going to let them go
unanswered, either.

>> > How many hams didn't start out with a lower-level license?
>> > People need to stop beating up on us poor no-coders.

Don't look now, but nobody's beating up on the "poor no-coders" unless
and until those same "poor no-coders" start beating up on us innocent
PCTA's who are merely stating their opinions with passion and
conviction.

>> Come into ham radio with a proper attitude (note I didn't say THE proper
>> attitude) and you'll be received just as well as anyone ever was.

Dick is absolutely right. My own radio club is full of No-code Techs, but
because of the fact that, for the most part, they haven't bothered to
place their codeless status under scrutiny by making accusations against
those of us who believe in and support code testing, we all get along
very well, indeed. When dealing with fellow hams in person, I have
never once asked for their license class. However, because my own
is self-evident by the configuration of my call sign, I have many times
been subjected to inquiries regarding my personal stance on code
testing, and then been treated accordingly. And while these are just
a few out of the dozens of hams I have dealt with in the past ten
years, these NCTA's have all followed the same pattern -- they stir
up controversy, focus that controversy on me and other PCTA's,
then drop out of sight the second they realize they're losing the
battle. The sad thing is, if they had only left it out entirely, nobody

would have had to bother with the issue in the first place!

>THE proper attitude is what he meant, though. Otherwise enter at your
>own risk.

No, Dick said what he meant, and he meant what he said. The NCTA
"attitude," which basically boils down to "I think we need to get rid of
code testing, and if you dare to disagree with me, I'm going to smear
you all over the floor" is the attitude to which he refers.

>> > Don't they
>> > realize that the new people look up to the old-timers?
>>
>> You REALLY must have not been reading here very closely at all, Greg.
>> Were that the case *here* you wouldn't have a report to make.
>>
>His words are valid. Initially, newcomers do look up to the
>old-timers. Till the moment the old-timers start pushing "No CW=No
>Ham" ideology.

I don't recall ever "pushing" that ideology until some NCTA pushed the
CW = obsolete, politically incorrect, non-inclusive, racist, bigoted,
homophobic, environmentally damaging, etc. etc. ideologies first.

Clint:

Well, I'm sure that in some ways that have nothing to do with amateur radio, Kim is a very nice person. So, if you ever do meet her, try to keep that in mind, and not the fact that Riley Hollingsworth once said that her choice of a call sign had the potential to take the ARS "...one step closer to extinction."

In article <f45722ac.0309200340.4cea8bf@posting.google.com>,
brianburke@juno.com (Brian) writes:

>Forever thinking of Kim, aren't you?

Brian:

I think about everyone in this newsgroup, particularly the "regulars" who have been here for a number of years. The truth is, in spite of our numerous and passionate disagreements, I don't think there's anyone here that I wouldn't like to know in person -- including Kim, and you! I think of time spent here as time spent with friends, and I can't help but to wonder if everyone else sees it the same way. Tonight, as in many nights in the past, I found myself composing, then quickly deleting, several posts aimed at certain people which contained my usually acerbic tone. In other words, I'm starting to wonder just exactly what I, and we, are all doing here, and what it all means. I can't honestly say that I'm ever going to change my mind about anything here, but I also have come to realize that in all likelihood, nobody else will, either. However, the way in which we disagree is something upon which we all should reflect, and I don't exclude myself from that.

Things are happening in my life that are causing me to consider the more eternal ramifications of everything I do. I know that I am not perfect, and that I, like most other people, am able to fall into the pattern of allowing my lesser nature to come to the surface. And while I cannot make a credible promise to not allow that to happen anymore, I can at least occasionally take the time to stop and reflect upon it, and take stock of my own behaviour.

I would like to think that if it were ever possible for all of us to meet in person, that that meeting would be both pleasant and enjoyable. And, as we continue to batter each other's opinions, I think it is necessary to realize that we are not necessarily battering each other personally. Whether or not the nature of Usenet tends to make our reactions to each other impersonal by nature, it does bear keeping in mind that there is another human being at the other end of our rhetoric. I know that I want to be treated as such, and I will try to keep that in mind when reacting to the rest of you.

Just some food for thought…any and all comments welcome.

Brian/Dwight:

This newsgroup got it's start in the early '90's when the code/no-code debate became an off-topic annoyance in the rec.radio.amateur and rec.radio.amateur.misc newsgroups. It was therefore decided to make this newsgroup the repository for the code/no-code debate, as well as any other inherently contentious amateur radio "policy" issues. In short, a place for those who will never agree to freely disagree, without the inconvenience of being bothered by the objections of those who couldn't care less.

>Dee D. Flint, N8UZE

Dee:

Well said. I can say the same with regard to Morse code, music, cooking, photography, shooting, and any of my other interests. My "talent" seemed to increase in direct proportion to the amount of effort I was willing to apply to learning and mastering techniques used by these activities. A lot of people think that "talent" makes it easy for people to make certain achievements in their life, whereas, what they are really seeing is the simple result of strong desire to achieve. In fact, a lot of people with true, pure "talent" tend to become bored, jaded, and detached from whatever it is for which they have this talent. It was that way for me with music. I started on the clarinet, but quickly learned how to play over 20 different instruments. Therefore, I must have had some kind of "talent," but the fact that it was easy for me didn't mean I had any particularly overwhelming desire to become a performance-grade artist in any of the instruments I could play. Therefore, I didn't. Had I picked one, stuck with it, and became it's true master, perhaps I'd be sitting in a symphony orchestra instead of driving a bus. But sitting in my high school and college bands and orchestras didn't inspire me to do that for a living. Go figure.

>military bands, and so on, and found very little code use (certainly far
>less than just a few decades ago, just as I said).

Dwight:

Uh huh. Right. I totally agree. And if I were discussing commercial or military communications, that may be a relevant point. However, since we're discussing Amateur Radio, you're just spinning your wheels with the NCTA's most famously irrelevant and unresponsive argument.

>> I'm gonna give you some free advice here, Dwight.
>> (snip) You're out of your depth when discussing code
>> testing, so I would suggest, for the sake of your own
>> credibility, that you chose a topic you know something
>> about.

> Now, let me give you some advice, Larry. You're too narrow-minded to even
>understand the concepts behind code testing. Code testing is not, and has
>never been, solely to benefit Amateur Radio.

OK, Dwight -- then, for the umpteenth time, please inform us what it IS relevant to OTHER than the ARS? By your own admission, no other communications service is using Morse/CW to any noticeable extent. So, WHICH ONE IS???

>Therefore, you can't focus
>solely on Amateur Radio when discussing the code testing issue.

The heck I can't, Dwight!

>So, for the
>sake of your own credibility on this subject, look outside your own narrowly

>defined little world at the much larger picture elsewhere (the view from the
>FCC's perspective). Only then will you be aware enough to seriously discuss
>this issue.

Dwight, unless and until you can show us just exactly WHERE the
ARS's code testing requirement ***IS*** relevant OUTSIDE of the ARS,
all you're doing is blowing smoke. And not very dense smoke at that.

The subject of this thread is "where PCTA's fail in logic." So far, it has
only served to prove that the NCTA's have no concept of logic at all,
and are therefore unqualified to discuss it.

> And exactly how does the number of CW contacts made qualify one to make a
>judgement about the value of code testing as a license requirement?

Dwight:

Simply by serving as an indication of your level of experience in that particular mode.

>Again,
>code testing is not, and never has been, solely for the benefit of Amateur
>Radio (or solely to benefit CW operations on those bands).

I see. Then perhaps you can tell us how it "benefits" photography, cooking, stamp collecting, or any other activity which isn't Amateur Radio?

>Code use is declining here and around the world.

Not really. In fact, the only place where it has "declined" is within the military
and commercial communications arenas, where there were relatively few Morse/CW operators compared to the Amateur Radio Service. And, since everything I'm discussing here is related ONLY to the Amateur Radio Service, that's the only group of Morse/CW users who are being considered by me in any of my postings.

>Looking solely at Amateur Radio, even
>the majority of those operators don't use code/cw on any routine or regular
>basis. Because of these facts, the need for a code testing requirement has
>vanished.

The total number of hams who don't use Morse code is relatively high, but only due to the fact that there are many other modes for radio amateurs to employ. I've never demonstrated any confusion on that point, therefore, you are raising an irrelevant and invalid argument here.

>> Twenty-two plus years of OTA HF experience as a
>> radio amateur, which has been about 80 percent CW,

>> 19 percent RTTY and other digital modes, and 1
>> percent phone. What's your breakdown?

> I believe the question was what experience you have that makes you
>UNIQUELY qualified to judge the value of a specific TESTING REQUIREMENT. I
>don't see anything above that would make you uniquely qualified in this
>subject.

Obviously, since you are in disagreement. That doesn't make you right when you say I'm not a qualified judge of the code testing requirement -- it just means
you have an axe to grind which makes it necessary for you to attempt to discredit me.

>Again, code testing is not, and never has been, solely for the
>benefit of Amateur Radio (or operations in those bands).

And, once again, you fail to mention who or what is benefited by it, if not the ARS. Please provide an answer, or quite wasting our time with this illogical statement.

>Therefore, the FCC
>is not going to judge the value of code testing based solely on Amateur
>Radio.

Then WHAT besides the ARS are they going to judge it by? The ARS is the only communications service currently using the Morse/CW mode to any extent which would require the regulatory attention of the FCC. Therefore, the Coast Guard, MARS, the Maritime service, etc. etc. are all entirely irrelevant and unresponsive to this issue.

>You have to look at the larger picture, Larry. At this point, you're
>still too narrowly focused.

I am focused on the Amateur Radio Service, Dwight. I realize you're thinking about all the other radio services which, for purely economic reasons, have dropped the use of Morse/CW and therefore the necessity to undergo the expensive process of recruiting, training, and providing pay and benefits to Morse/CW operators. This has no impact in the ARS -- but you, in true NCTA fashion, fail to grasp this very simple concept. The plain fact is that the ARS has no personnel-based "cost" at all. Therefore, your argument is irrelevant and unresponsive.

Dee:

Correct. And the Morse/CW mode is definitely one of those things that one must "experience" before they become qualified to make any sort of judgment about code testing.

Dwight:

Perhaps, but the accuracy of those judgments are definitely affected by having had those experiences, or not. Someone who has never experienced a house fire, a terrorist attack, life under a tyrannical dictator, or a business failure is certainly capable of making the entirely incorrect judgment about any of the above. Therefore, I will give you this one, with the stipulation that people who haven't used the Morse code can also make a judgment that code testing is current and essential as a licensing requirement in the ARS -- but I'm sure you would disagree.

>> (snip) You have not had that mode's unique benefits
>> and advantages proved to you over and over again through
>> years of daily OTA use. I have. (snip)

> Again, this is not about Morse Code/CW use - it's about the code test
>requirement.

Unresponsive. 100 percent of my comments are directed precisely at the code testing requirement -- very scrupulously so. There is no confusion on this issue, therefore your constantly bringing this up only serves to demonstrate your own lack of reading comprehension.

>I can have that operational experience without a test
>requirement and you can continue to enjoy the "mode's unique benefits and
>advantages" long after the testing requirement is gone.

I do not disagree. However, experience has shown that people who aren't required to be code tested usually don't bother to learn and use the Morse

code, so the issue does relate to code use, only to the extent that the lack of a requirement would tend to cause a decline in the use of the Morse/CW mode in the fullness of time.

>its own needs will result in the best suited result.

Clint:

The so-called "free market" is VERY highly regulated all over the globe. About the only thing most business entrepreneurs are "free" to do these days is to strictly comply with regulations telling them what they can sell, how they can sell it, and whom they can sell it to. Code testing doesn't even come close to being the same thing, particularly since the Technician's license gives a ham 97% of all available amateur radio operating privileges without a hint of a code test.

>If you have to MAKE it happen, then it isn't making it on it's own
>merit.

Fine. Then let's get rid of any and all testing in schools at every educational level. After all, all those tests only "force" students to demonstrate academic achievement, don't they? That's "making" an education happen, so we can't have that, can we?

>social engineering.
>it's affirmative action for CW; it's as you said, a welfare program for
>it....

Don't look now, Clint, but welfare programs are "handouts" that give away valuable assets as if the recipient were entitled to them simply by virtue of being there with his/her hand out. It is the NCTA that wants a welfare program, not the PCTA.

>> >One of the classic NCTA whines. Us horrible old PCTA's want to keep

If I choose to talk on that frequency, I will, so long as I'm abiding by the
rules and regulations as they are spelled out. YOU or no one else, can tell
me to stay off. ASS WIPE.
.....
Good thing old Rich Whiten is gone...THAT was a radio Hog times two....
The old YI YI song reminds me of Rich's selfish stupidity as he keyed over
all but a few of his chosen "butt buddies".
Rich would, in his arrogance, ignore all Hams who weren' t running
megawatts....of course old Rich got caught running over the legal
limit...among other things.
Story is that Rich got pissed and sent his resignation of his license to
Riley Hollingsworth. Riley accepted the resignation and rescinded Rich's
license.
Enter another story...Rich is now claiming that his letter of resignation
was sent "by mistake" to Hollingsworth and Whiten wants his license back.
Sorry, Rich. Your weak story ain't holding water up this way.
Gosh...how does one send email "by mistake"?
Rich is full of it...he screwed up out of anger and now he wants to take it
all back. It doesn't work that way.
Porkbutt Song.....YI, YI, YI.....

Just out of curiosity, what ARE the ingredients of a pizza?

>> I love pizza but hate tomatoes, cheese, and garlic. Yet
>> combine them into a pizza and the result is entirely different. No one
>can
>> tell how a cake will taste simply from reading the ingredients on a box.

Unless, of course, that particular cake is made with tomatoes, cheese,
and garlic -- then you, by your own admission, would have a prejudiced
notion of it's taste. And, if the cake was made from scratch, one may
not have a box from which to read the list of ingredients. Then, the
only way to judge the cake's taste would be through direct, personal
experience. I'm sure more cakes are judged in this manner than by
any analysis of the ingredient list.

>Depends.

Eouuuuuu!!! I wouldn't want to make a cake or a pizza out of them!

>>
>> Dee D. Flint, N8UZE
>>
>
>I think you're grabbing at straws, Dee.

No, Kim, actually she is quite correct. Personal experience *does* give
us a better ability to evaluate things and formulate judgments for or
against them. While non-participatory analysis of the parts of the whole
may lead us to draw some certain conclusions, those conclusions would

tend to then be colored by our prejudices for or against any one component, such as eggs, cheese, or tomatoes. Only when the whole concept is brought together into the sum of it's parts, and experienced by a truly qualified and objective person who doesn't have an agenda to either be for or against the result, can a fair and credible judgement be made. This applies equally to cake, pizza, and Morse code testing within the ARS. It is not "grasping at straws."

Dwight:

Thank you for noticing -- I've been making an effort to conduct myself at a level more in keeping with that of a reasonable, intelligent person. I may slip from time to time, and I just noticed upon review of postings made earlier that I had, indeed, again transgressed against Kim. This just serves to remind me of my need to maintain my watchfulness over my own behaviour.

Now, then, how does the advocation of code testing in any way correlate to bigotry, elitism, and/or discrimination against other Americans? The code tests, both past and present, have proved to be achievable by people from all walks of life, including those with communicative disabilities up to and including total deafness. Try as I may, I can't find anything patently "discriminatory" there. So, take a shot of setting me straight -- how is code testing "discrimination?"

>> If YOU want to TRULY support personal initiative without

> I've discussed that contradiction with Larry before. He does seem to
>exclude code testing from his conservative views opposing excessive
>government regulation.

Correct, because I don't consider it to be "excessive" government regulation. I believe the government has a valid need to regulate certain

things, especially valuable and finite resources such as the RF spectrum. Therefore, I believe that when license is to be given for the PRIVILEGE of free use of RF spectrum, which is worth potentially billions of dollars should it be converted to commerce in the commercial utility communications and broadcasting industries, certain government regulation makes good sense.

>If Morse Code has real value, it should be able to
>survive in as close to a free market environment as possible.

Well, that's a wonderful concept, Dwight, but history has shown that it doesn't work when put to the actual test. The No-code Technician experiment only served to bring us a couple hundred grand of new hams who self-limited their amateur radio experience to the 2-meter repeaters. Naturally, they all want the freedom to use HF phone, but that still (for now) requires that they learn the Morse code and pass a test, albeit at a mere 5 WPM. The fact that they are not doing so in any great numbers indicates that the Morse code does not have any particular drawing power based on it's own "merits," as the NCTA would infer. And now that there is a very bold dotted line drawn around even this meager requirement, the incentive has all but fully evaporated.

>I think it has
>that value and can survive just fine without a regulation mandating testing.

And I don't -- and have seen conclusive proof that it won't.

>> The FCC regulates and licenses ALL civil radio in the USA...
>> yet none of the staff nor commission of the FCC are required to
>> pass any morse code test in order to regulate US amateur radio.

> Of course, that should be obvious. But Larry's position benefits him
>more - if accepted, it would undermine all those with different views on
>this subject. Clearly, only those with views similar to his would accept
>such a premise.

First of all, FCC Commissioners are political appointees, not necessarily technical experts. They can, and do, depend on the advice of professional technical experts, who actually formulate and subsequently make recommendations on regulatory matters. The Commissioners mainly ensure that these regulations meet the needs of their respective political constituencies, often with numerous conflicting interests battering them from every angle.

Second, it is not my desire to "undermine" anyone. I don't view the Morse code testing requirements, past or present, to be in any way unachievable or otherwise discriminatory. In fact, I view them as being directly in support of the concept of learning and maintaining the use of a highly useful communications skill, therefore, the requirement has, IMHO, intrinsic merit. This does not "benefit me more" than anyone else in the ARS. Moreover, I am definitely not squelching anyone with different views. This newsgroup is adequate evidence of that.

>> You seem dumb and dumberer to the fact that every other radio
>> service (except a small part of maritime radio) in the USA has either
>> DROPPED morse code (snip)

> Actually, as you may know, even the International Maritime Organization

>telecommunications. It's positions are adopted by the ITU.

All of this is really swell, Dwight, and trust me, if my dinghy were to spring a leak in the middle of a busy shipping lane, the last thing I would do is break out my J-38 and ask the next passing Liberian tanker to swing by my position and fish me out of the drink. However, I would have my marine HF and VHF radios powered up, and I'd have the mic in hand, screaming like bloody havoc! However, this discussion is about the AMATEUR Radio Service. Can you PUHLEEEZE, just for once, get that concept thru your Kevlar skull? Your lack of situational awareness, while accusing me of the same, is getting to be quite frustrating.

I liken it to people who watch the televised arguments on Fox news and
others. A half hour of angry people yelling at each other. Eventually
some people think this is the way to conduct all discourse.

When in fact it is just exhhibiting dhildish, boorish, behavior that
just proves that something went amiss when they were being brought up.

Care to put your accusations in writing and signed, guys?

Pretty pleeze?

You align yourself with a fine group Alun. We who like the idea of a Morse test are accused of being jacbooted thugs N****S, and now illegal drug abusers.

They are fine qualities for anyone! No one has to be achairman of a corporation. But if we all tried to do our best at whatever we do, the world would be a better place.

The only disadvantage of my outlook vs yours is that I don't have an excuse for failure before I even start.

Thats the beauty of assumptions. If they were always correct, they
would be called something else.

> >> The jerks who show up her complaining about the code test requrement and
> >> blaming all us who just did it, without complaining.
>

No it isn't. What about "the jerks who show up here...?"

It was the NCTA that started this debate, and
> turned it into the slugfest it became when they blamed just about everything
> bad in this world on those of us hams who were able to learn the Morse
> code and pass tests at strictly amateur-level speeds.

And I heard about all the ills that will befall the ARS if the FILTER
is done away with, if people don't show enough EFFORT. Then there's
the other Morse Myths that were being put to bed, such as, if there's
an emergency CW ALWAYS gets thru, you can cobble together a CW
transmitter out of ANYTHING in an emergency, only CW will work in an
emergency. The answer that I liked best was "I'm going to make you
learn Morse Code because I had to."

That was brilliant.

The code testing
> requirements had always been reasonable and were proven to be
> achievable by people from all walks of life, even those with severe
> communicative disabilities.

I disagree that it is reasonable. First, there is no other pass/fail
mode test. If there were, then your assertion that it was reasonable
would not fail so badly.

However, the NCTA, in their need to make
> the attempt to prove the code tests to be unreasonable and somehow
> irrelevant, were the FIRST ones to resort to the empty rhetoric, negativity,
> and name-calling with which we have all had to contend.

Larry, I don't claim to have been the first one here; I arrived about
1995. But don't you think a DECADE is long enough to get past who
said what first?

Whah, whah, whah.

> >> That in so doing
> >> learned that Morse code does indeed add substantially to ham radio, to the

> >constantly attacked.
>
> Incorrect.

Correct.

> It is the NCTA's to began the "attacks."

What? In 1992?

In one of my earliest
> postings on Fidonet over a decade ago, one of the NCTA replies accused
> me of "ethnic cleansing" because I dared to agree with the present code
> testing requirements.

He accused you of ethnic cleansing over 5WPM Extra? I can't even
imagine it.

I surely didn't start out with the notion of making
> such rash statements, but I certainly wasn't going to let them go
> unanswered, either.

And so we get from you, "welfare mothers of color with their hands
out...," "my favorite black on the bus...," "don't let the door hit
you on the ass on your way out of the ARS...," "knuckle dragging
trailer trash with southern accents...,"

You sure made the PCTA proud! Stand a little taller, Larry.

> >> > How many hams didn't start out with a lower-level license?

Uh, Larry, many of the NCI/NCTA are "coders." And by what passion do
you refer?

No CW = No Ham Radio

> >> Come into ham radio with a proper attitude (note I didn't say THE proper
> >> attitude) and you'll be received just as well as anyone ever was.
>
> Dick is absolutely right.

I noted that DICK didn't say "THE proper attitude," but thats
certainly what he meant.

My own radio club is full of No-code Techs, but
> because of the fact that, for the most part, they haven't bothered to
> place their codeless status under scrutiny by making accusations against

> those of us who believe in and support code testing, we all get along
> very well, indeed.

Why would their codeless status be scrutinized?

Why would an opinon that code testing should come to an end be
expected to be kept silent?

Certainly you don't keep your opinions to yourself. Sounds like you
are running a concentration camp and not a radio club where each
member is valued.

"You No-Coders sit over there and shut-up, or we'll compare you to
welfare mothers with their hands out. You know, the ARS isn't for
everyone, so don't let the door hit you on the ass on your way out."

When dealing with fellow hams in person, I have
> never once asked for their license class. However, because my own
> is self-evident by the configuration of my call sign, I have many times
> been subjected to inquiries regarding my personal stance on code
> testing, and then been treated accordingly.

I'm sure your replies were less than charming. Your subsequent
treatment was probably deserved.

And while these are just
> a few out of the dozens of hams I have dealt with in the past ten
> years, these NCTA's have all followed the same pattern -- they stir
> up controversy,

Larry, it has been a hot topic within the ARS since Novice
Enhancement. Why wouldn't it e brought up, unless we're in a
concentration camp.

> focus that controversy on me and other PCTA's,

Uh, Larry, you act as a lightning rod because of your people skills.
Is it any wonder your career in Human Resources didn't fly?

> then drop out of sight the second they realize they're losing the
> battle.

Uh, Larry, you call 5WPM "losing the battle?"

The sad thing is, if they had only left it out entirely, nobody
> would have had to bother with the issue in the first place!

It is an issue who'se time has come, and now, is almost past.

> >THE proper attitude is what he meant, though. Otherwise enter at your
> >own risk.
>
> No, Dick said what he meant, and he meant what he said.

You may think that. I don't.

The NCTA
> "attitude," which basically boils down to "I think we need to get rid of
> code testing, and if you dare to disagree with me, I'm going to smear
> you all over the floor" is the attitude to which he refers.

Putting to bed your thirty or so Morse Myths is not smearing you all
over the floor.

> >> > Don't they

Larry, I know that your reasons to retain the code exams are
irrational. Who called who a "his favorite black on the bus" really
doesn't matter at this point. Your retention arguments just don't
hold up. Sorry.

Now instead of trying to take your ball and going home, why don't you
try to play nice? Lose the stupid "I am a superior ham" nonsense and
go work on your WAS.

Brian

It's probably a good idea to keep this in the realm of fun argument guys. This crosses the line. If you think that accusing CW affecionado's of drug abuse is amusing, I might beg to differ.

I remember that. The 'phone folks had even poorer results with it. Thing was fed with nice new RG-213 and was 70something feet up in the air. Shoulda been a killer but my homebrew trap dipole at 50' was doing at least as well.

>Century nitwits.

Well, I wouldn't call 'em that!

Just folks with relatively little experience, that's all. FD is supposed to be a learning experience, and I sure learned a few things ;-)

One of the big differences between ham radio today and the way it was years ago is the way hams get started. There are exceptions, of course, but the following is generally true:

Once upon a time, most new hams started out on HF, and so learned early on about things like basic antennas, zero beating, tuning up rigs and antennas,

characteristics of different bands and modes, how to deal with QRM and QRN, etc. Lots of homebrewingAnd they also got a front row seat on how much CW is used in the ARS, and how useful it is to hams.

What you got in that system was an "HF-centric" view.

Nowadays the entry point is usually VHF/UHF with manufactured equipment. Different experience calling for different knowledge and skills. And the result is often a "VHF-centric" view.

Dammit, Larry, now you've done it!

First, I have always wanted to meet Dick Carroll, just to see if his head was misshapened or if he suffered from Napoleans affliction, if he has that MO twang, or if he like guns as much as I do so we could quit sparring over the code.

I'd like to mess around in Dave Heil's shack an see what he's done with those low band loops, or if he prominently displays my KH2 QSL card on his wall, next to Martii's. I imagine my thought of him being smug would disappear - it may be an artifact of me reading his posts on the web.

Len, well, what can I say. He's been my mentor for years. Never afraid to jump in with both feet, but more caustic than Drano. Few have dared to go there - but you're one of them.

Kim, beer and BBQ?

There are many more, but I'll stop now.

Maybe we need to gather at Dayton 2005.

Brian

By eliminating the testing requirement for Morse code, we are seriously undermining people's freedom of choice. Choices need to be based on sufficient knowledge of the subject. Morse code is one of those areas where a person needs to learn the basics and experience it before they have sufficient knowledge. Keeping the test means that individuals will have a better knowledge base upon which to choose whether or not to pursue Morse code to proficient level. No one is required to use Morse code after learning it.

Arnie,

Unfortunately we have too many people in this country who think freedom of speech takes precedence over common decency. They don't realize or don't care that by being inconsiderate in their choice of words or analogies that people will discount what they say. It is more important to them to do it their way rather than in a way that will get the audience on their side.

Passing with 100% copy when the character speed is 5wpm can be done by counting dots and dashes and checking the lookup table in your head rather than responding on a reflex basis. There is no contradiction as you seem to imply. At characters speeds of 13wpm, one can avoid the trap of counting and lookup and learn to respond reflexively ultimately leading to mastering higher speeds.

Using a method that encourages people to count the dots and dashes erects a barrier to going on to higher speeds. Why use a method that creates hardships that will cause a person to have to start over with a new learning process if they should want to use it? The teaching and learning of any subject should be approached from the point of view that the person may someday want to use the material taught not from the viewpoint of passing a test on it.

This, on top of Roll's admissions, couldn't make the PCTA's position
and attitude any plainer, to even a casual observer.

I have seen much the same thing. The talented find it too easy and drop by the wayside. I particularly saw this in the martial arts. I saw several students, including some of my own, who could have, if they continue, dramatically overshadowed me and the other instructors. Yet after a few months, they dropped out. It was us untalented but hardworking people who went on to the national tournaments and brought home the medals.

If it were practical to set up and administer pass/fail tests on other modes, I would certainly support doing so. It is unfortunate that it is only practical to administer code testing and written testing.

Oh how cruel! Dee, you are a meanie. You are stunting your kids
emotional growth and forcing them to do something they don't want to. NO
one should be forced to do something they don't want to be it Morse Code
or eating foods that are good for them. - end of being facetious.

How about NBI - NO Broccoli International?

What these free speech hypocrites don't seem to get, is that it works both ways. While they insist on calling us Nazi's, they consider our objections and replies to their repulsive comments to be denying them their free speech. It is not. That is an example of free speech in action. Everyone has their say. Just as they can call us Nazi's, we can object.

No that page does not really support me. It advocates the "sounds-like" method which is also poor and creates another barrier. The "sounds-like" approach will get you past the 5wpm easily but then blocks you at about 15wpm more or less. As discussed in "The Art and Skill of Radiotelegraphy," I advocate learning by direct association of the letter to the sound to build a reflex. Any method that requires additional associations, will create a plateau at some point. To get past that point, you've got to ditch the association.

Also the page says nothing about how often and how long to practice. I note that they talk about taking a year to get to 5wpm. That's way too long and will discourage people. With proper methods and the proper frequency of practice, it should only take about 30 hours to get to 5wpm (see "Morse Code, The Essential Language").

Good points Clint. But your last sentence shoots it all to hotel.
Basically you just admitted your too lazy to meet the standards. Whatever.

This arguement has and probably will, go on and on and on.

And there is a movement to remove the CW segements from the HF allocations. There has been a discussion right here and I believe one or was it two ??, comments I read to the FCC.

So there is a group out there that is really starting to piss the real hams off. Bet that ticked you off, didn't it ?

Have a nice day.

Good point, Mike. The concept of free speech is a basic tenet in any democratic society - one needs only to look as far as the former Iraq, where open disagreement with a government policy could buy you a quick ticket to the next world, or at the very least a personalized basic electricity course.

But free speech does not mean that any simian with a functional larnyx is permitted to publicly say anything that he or she wishes - for example, the holocaust deniers and the KKK have proved that point quite well in recent history. Slander and libel laws are another example of limits on 'free speech', intended to mitigate and assign accountability for the damage that it can cause if out of control.

Those who lean most heavily on the free speech arguement are those who are unable to formulate lucid and cogent rebuttals. Which takes more mental effort, delivering a strong targeted counterpoint or calling your opponent a Nazi? This is especially difficult to do well in a real-time heated arguement with someone, requiring both a quick mind and self control - but given the time delay provided by Internet newsgroup communications, one wonders at the intellectual capabilities of the individual who after a few hours of deep mental calisthenics cannot do better than grade-school name calling as a response.

I'll bet that Charles Darwin would have loved Amateur Radio.....

It actually could be done. Example; Pass a basic written test for say the General class.

This would give you basic privlidges of say SSB, FM, at 200 watts on HF. Possible retaining the sub bands also.

Then have a ENDORSEMENT to be added for additional modes, i.e. SSTV, Digital, even CW, etc.

This could be the pass or fail part of things. Given at a local ham club, by those that already have the endorsement or are grandfathered into it by past experience.

Just a thought.

Dee,

Well, it does support your point on not trying to learn the code a a series of dots and dashes - but agreed, it may not be as good as method as straight letter association for high speed operation.

Guess it depends on the end goal - if you intend to go above 15 WPM, then this may not be the best method. If you want to pass a 5 WPM test and get on the air, it can be done using this method in well under 30 hours. (that's how I did it - 1/2 hour a day for three weeks).

With practice, I no longer find myself using the word associations as much as I did initially - I'm just writing down the letter received, and hearing words like "the" as words, not letters. So, is there really a disadvantage to learning by this method? Perceived, perhaps, but I haven't hit a wall yet. Passed the test, though - that was the goal! :)

I would insist on an operational test for SSB and FM too besides the
written. And I would insist that the operationals be conducted by a VE team
to an established standard not just a "well he is doing OK" sort of thing.

I don't really believe in the concepts of endorsements for various modes.
The candidate should be required to learn the basics in each of the modes
before getting a license. Or make SSB and FM contingent on passing the

other modes first. They should be the last privileges to be earned rather than the first. Otherwise we will end up with way too many of the HF equivalent of "repeater creatures."

Leo,

It looks like you are one of the lucky ones who shake the word associations easily and move on. Other people do hit a barrier as they find it hard to get rid of the word associations. So in my opinion (and I freely admit it is an opinion) that it is better not to risk the word association approach even though it may take a little longer that way.

By the way the 30 hours is an average so that is what I quote to people so they don't get prematurely discouraged. Some will take less (like you) and some will take longer (like me). The good thing is that once a person gets to 30 hours they can see visible progress even if they are one of the people who needs a little more time. So once they are at a point they see progress, they are willing to take the time to finish as they know they can do it.

And I like to teaching things from the point of view that the real goal is to provide the basis for future advancement and use rather than setting the goal as passing a test. Tests are merely a tool to check the effectiveness of the teaching and to check the effectiveness of the learning. Although there are other ways to do this checking, tests are the most efficient.

Well Lar, it is beyond evident they have gone about changing Webster's
definition of the word to mean "anything I decide is descrimination".
Of course that just follows along with the PC drift in sociaty where
such "I don't want to"
movements tend to ride the coattails of real discrimination.

You know the drill, Mike. To divert suspicion from oneself, accuse
the opposition of exactly what one does himself.
You do have to wonder at times. Radically violent thought process and
illicit substances sure would go far to deter one from the
selfdiscipline of learning something like Morse code.

Dick, have you not heard one word we've said to you over the past
decade?

If you want to use code, FINE!

If you want to build code into your personal Emergency Operations
Plan, FINE!

If you want to create an organization, call it FISTS, and dedicate it
to the use of Morse Code, FINE!

If you want to participate (or not) in CW Contests, FINE!

If you want to risk your life trying to cobble together a CW
transmitter during an emergency, FINE!

But the days of requiring otherwise qualified people to have to learn
your favorite mode just to participate in HF are over. Get used to
it. Adjust. Adapt. Overcome.

Your approach to getting other people to learn your favorite mode has
to change, because you can't say, "Just learn it because I had to."

That just doesn't wash anymore. People don't accept "Just because,"
anymore.

You've got work to do, and it isn't getting done by being crappy to
people who don't share your views. You think vinegar is going to
attract new Morse enthusiasts? It isn't. You think wasting your time
arguing with people like me is going to convert us? It isn't. I
think code is just one of many modes authorized by the FCC. I haven't
used SSTV, so why aren't you complaining about that?

Get on with it, and quit complaining to me about it.

73, Brian

Those folk can't be bothered to learn facts Dee, their minds are cast
in stone. No amount of
rational persuasion is competent to educate or enlighten them.
Meanwhile they rant about the
backward state of code supporters, of whom far more are involved and
knowledgable on late digital modes than any serious number of them!

Such ignorance would be amazing, even laughable, if it didn't portend
the future.

>that code testing is NOT a "yahoo filter")

How many violators are you talking about, versus how many licensed hams? Maybe 30 violators out of 300,000? That's 1 in 10,000 - .01%

Note also that ALL hams have taken written tests on the regulations and operating practices, yet there are still violators.

No "filter" is perfect.

Note this plain, simple fact:

The vast majority of hams cited by FCC for operating violations are/were using voice modes. Enforcement actions against hams using CW/Morse are almost nonexistent. The ratio is far beyond what the relative popularity of the modes would predict.

So maybe it's not the TEST but the USE of the mode that is the key. (bad pun intended).

You're forcing the idea that the standards for a license must be changed.
>
>>People SHOULD NOT be able to force a change on the licensing
>> authorities, based mainly on being too lazy to try to meet the standard.
>
>it's a representative republic; the very cornerstone of democracy is that
>the people are able to effect change when they feel it necessary for
>whatever reason THEY feel.

Up to a point, that's true. However, the idea that "the people" can force
whatever they want is limited. For example, even if a majority of people think
that OJ was guilty, it is not within the government's power to imprison or
excecute him based solely on what "the people" think. Nor should it be.

> The idea that it's because they're "too lazy
>to try to meet the standard" is simply your spin & rhetoric.

The same can be said for someone who says the only reason anyone is procodetest
is because they think "I did it, so everybody should have to be forced to do
it!!!!!"
>
>> Why should those of us that have the dedication have to be forced to have

Look again. There are those who not only advocate code test elimination, but
also the reduction or elimination of the CW/data subbands.

I don't believe that.
>
>OH! so you admit the OTHER half of the AWEFUL truth! it comes down to
>you want to FORCE people to do something they don't want to do necessarily
>of thier own free will!

Not really. Nobody is required to get a ham license. It's all voluntary.

Why do the schools bother to teach basic arithmetic and math to children these days? Calculators are everywhere. Why not let the kids decide what they want to learn instead of FORCING old-fashioned manual arithmetic on them?

>well, the thing that made america so powerful, such

>
Then what will you say to those who would use the same argument against the General and Extra written tests? After all, FCC thinks a single 35 question multiple choice test is good enough to allow Techs to use any authorized mode, frequency or power above 30 MHz. Is operating a transmitter on 14 MHz that different from operating one on 144 MHz that another couple of tests are required? Or is it just a "hoop jump" to FORCE theory on hams, amny of whom don't want it?

Good question! Depends on the number of turbines needed.

However, note that the land used for wind turbines of the pylon-tower type is also available for other uses, such as farming.

>without accusing each other against crimes against humanity!

Exactly!
I'm perfectly fine with people debating the code/no-code issue, and this is exactly the right newsgroup to do it on, but what bothers me is when a post on .equipment about what rig to get turns into an argument, then into a discussion of how stupid other people are, then into a code/nocode flame war. Even this thread is rapidly spiraling towards flame-war state (see last sentence of initial post). It's fine to debate, and even argue, about the CW issue; it's fine to let people know your point of view. But when it turns into a flame war, all that does is create hard feelings and fill the news servers with absolute garbage.

>
>Because the terms of their license make them responsible for the quality
>of their radiated signal(s).

Maybe. But a ham is not required to actually know how his/her equipment works, nor to be able to work on it. Just for the result.

I'm not required to know how my cars work, just how to use them safely. I am "responsible", however, to see that they meet all applicable DMV requirements, including pollution and safety equipment. I can do the work myself or have it done by others. The same is true for ham equipment.

The FCC thinks that Technicians are adequately tested on that, for all authorized modes and technologies. There are no modes or technologies authorized for amateur HF/MF that are not also authorized for amateur VHF/UHF. So there is no absolute need for any of the General or Extra written tests *except* perhaps a few regulatory and propagation questions.
>
>Without demonstrating some familiarity with the basic underlying
>science, it would be irresponsible of the regulators to allow an
>applicant to establish a radio transmitting station on the public
>airways.

See above about Technicians.

And here's another point: There's almost nothing in the tests about some technologies that hams are allowed to use. For example, vacuum tubes - not very much in the tests about them! Yet FCC *trusts* hams who want to use vacuum tube technology to learn what they need to know about it and operate their equipment responsibly. So why all the tests?

>Familiarize yourself with the concept "tragedy of the
>commons".

You got a handy reference?

Dee,

That makes perfect sense - I wasn't aware that word associations could cause a problem later on.

I guess that we belong to different schools of thought regarding the CW testing for HF band access - you see the goal as continual development of CW skills, with the test being a measurement of progress towards that goal. I viewed it more as a hurdle to be overcome so that I could gain full access to HF - and do not plan on becoming proficient in CW past that goal (may change, however - I'm getting rather fond of CW, especially when working DX in marginal band conditions....).

I think that your approach is actually the right way to go - in retrospect, it would have been better for me to 'aim high and miss, than aim low and make it", if I do decide to go on and build speed.

Enjoyed the dialogue on this - thanks, Dee!

This is not an unusual phenomena by the way. People who thought they would never use it end up falling in love with it. The next five years or so are going to have those marginal band conditions on a regular basis. Plus if the QRP (very low power) bug bites you, code goes hand in hand with it. Low band work (80 and 160 meters) can also draw a person into code for similar reasons.

is that a true story? or did he say callsigns LIKE hers (without nameing
hers specifically) were potentially harmful? Just curious... talk about
being (in)famous.

When I first saw the callsign, I must admit I thought nothing about it
until I found out that the person who owened it was a woman. Seriously;
call it male chauvanism, or bias, whatever, but I literally only say
"kilo 5 tango india tango" when I saw it... but when I learned of the
gender of the owner, something clicked in me mentally and caused
me to re-assess the callsign.

The only thing that it DOES bring to mind, now, is the constant question
of whether or not she chose it because she's female and nothing more,
OR, if it is because she is female "and THEN some", if you get my drift.
I have never had the nerve to ask her a beavis and butthead question,
no matter how much it has in fact been going through my very
barbaric, primitive, neanderthal mind.

Where's my club?

Clint

> undermining people's freedom of choice.

Oh, that is such dreadful stretch it literally IS laughable. Be reducing or
eliminating a requirement we are LIMITING freedom? just what
backwards, reverse logic came up with THAT?

or, if this is it....

Keeping the test means that individuals will have a
> better knowledge base upon which to choose whether or not to pursue Morse
> code to proficient level.

THAT is where the very basic logic that the PCTA crowd has is incorrect!
You are refusing to diffuse the two subjects of "testing" and "use on the
bands".
Morse code, as well as ssb, fm, fax, and every other mode of operation
exists totaly independant of testing for it... for the very simple reason
that the
testing process is NOT the one and only available means for learning about
it.
Reference books, history, word of mouth, the internet, and every other
method
available for exchanging ideas in society will continuously make it and
every
other legal form of communication readily available to anybody who has,
AND THIS IS THE IMPORTANT PART, an basic natural desire to do so.
If this desire doesn't exist, over a thousand years of human history tells
us
that FORCEING people to do something they do not want to do naturally
compels them to resist it. I honestly believe this is one of the basic
reasons
you DO see such a resentment for the code today.

Free of exterior pressures, allowing a free society to evolve naturally and pursue it's natural course, just like in economics and politics, is the best policy you can use.

Let me give you another example; 8-track tapes. They were available before cassettes and compact disks were. It is illogical to make a law REQUIREING people to learn about 8-track tapes, "just so they can have the knowledge base necissary to make an informed decision". This comes naturally; 8-track tapes need not and SHOULD not have been subsidized by the federal government in any way. The free market chose what they did for such a multitude of reasons, each on of which are necessary to enumerate here but the ultimate reason is the same. Seriously; what logic would there be if you went to hastings, or discount music, walmart, or whatever retailer you can name and wanted to buy a compact disk, and the salesman there said "i'm sorry sir, first you are going to have to present your license proving that you have been schooled in the history and use of 8-track tapes."

Talking heads... I think CNN first made this popular.
It was the darndest thing I ever saw; well-groomed
adults sitting there in each of thier little windows, and
once the "ringmaster" fielded the question, all
nuiances of a mature environment went right out the
window and the high-dollar, well paid, pampered
"experts" just started screaming at each other.

You were lucky to understand any real comments,
whether or not you agreed with what was being
said sometimes couldn't even come up to your
attention. It would end with the "ringmaster"
saying "well, I thank you all for joining us,
always a pleasure to have you."

and I thought to myself, "boy, THIS will never
catch on. THAT was insanity!"

oh, but just look at what has happened.

Hello, gang.

I just read through the tread and would offer this - I had learned dots and dashes back in 1962. I passed my novice, but couldn't pass 13. In 1964, due to a long time friend of mine, I purchased a code record, got to 18 words per minute, and obtained my general. Then I discovered I enjoyed code. I passed the extra in 1966 along with my commercial radiotelegraph and 1st radiotelephone license and in 1967 handed in a perfect copy on a typewriter at 40 words per minute in the Navy. There is a problem with the dot/dash/mental table which will really hurt when one tries to get past 10 words per minute. Been there, done that LOL

"if you want......
"if you want....
"if you want....

....then all that is FINE, but..."

isn't even getting through to those people. They're not hearing it.
read back a few threads and you'll see one of them actually
tell me that "removing the testing requirement limits people's
choices". I'll just let that one sink in with you and please accept
my remark as being accurate, you can go back and read it.

They will not seperate the two issues of "testing" and "use".
It's "you WILL learn it!" (followed by the unspoken but
agreed upon reasoning, "because I had to").

I think the basic problem is that they have a few preconceived
notions that are wrong. They seem to feel that people will
enjoy doing something if forced to do it, if they otherwise wouldn't,
which human psychology doesn't support this at ALL, nor does
the history of economics. They feel that somehow, if not required
to be tested on it, people will forget about it and not want to
do it.

I never took a profeciency test for ssb, fm or AM and I enjoy using
those modes, managed to look up reference material on them and
learn about them without having to have a test to make me do so,
and furthermore, what I did have to know was covered on a
knowledge test. Hey, there's an idea. How about just incorporating
CW into the knowledge test as part of the database? asking
what random characters are? what the definition of the farnsworth
rate is, and how a code key works? What does "full break in"
ability mean on linear amplifiers?

Oh, no, this will never do. even though the reasons given were that
a person needs to learn about it in order to make informed decisions,
and this would have him learn about it, it comes back down to
the old tried and true SPEED OF RECEPTION test;

I had to do it. Read: We were once subjects of the british
king
So should you. Read: YOU, therefore, are a subject of the king.

Shut up and do it. Read: Shut up with your ideas of revolution.
Do what the redcoats TELL you to do.

Oops, i'm sorry, now did I offend somebody to referring to the redcoats, the way I did previously with the brownshirts? Lord knows in today's society we need to avoid everything that offends anybody.

but I digress.

gotcha on that one.
I never told any of you PCTA to quit stating your opinions, the way you guys have, many times in this thread alone, said "quit whining about it and do it" (which means shut up).

We are saying that it is our strong opinion that, in the democratic process that this country uses and has been strengthened by, the next step in the strengthening part of the process (as far as the role of the FCC in amatuer radio plays), is to eliminate morse code testing.

NOT use (we're not telling you to SHUT UP with using morse code and quit transmitting), we're saying quit FORCING it on people.
we're advocating the EXPANSION of freedom, not the restriction of freedom via regulation.

"just shut up and buy 8-track tapes when the redcoats point thier bayonets at you and TELL you to."

As you obviously don't know, the message gets through a lot better when you speak in terms appropriate to the audience. Any public speaker knows this or if he doesn't, he learns it quite quickly. If you don't present your ideas using terms that the audience understands and likes, they will tune you out. Your message is wasted. and so is your time if you've just got to "let it all hang out."

Name the first fact that I am refusing to learn.

I am more than willing to learn about the history of morse code, and it's
use, and it's applications (no matter how dwindling and disappearing today);
I have no problem with other people doing the same, if they SO CHOOSE.

I have a problem with people like yourself claiming how nice freedom is
and then saying "but you should learn THIS regardless of whether or
not you want to!"

"shut up and buy the 8-track tapes when the redcoats TELL you to.
we don't care if you listen to it later or not, but you WILL do what
you're told and buy it."

Clint,

My dissertation was directed entirely at the point that Mike had raised regarding calling other folks "Nazis" because they would not agree with their point of view. But, to answer your question: did you do something illegal? Of course not. Insensitive, foolish and intellectually bankrupt, perhaps - none of which are punishable offences.

The use of Ad Hominem (attacking the person rather than the points raised by the person) in arguements dates back to Roman times, and has long been the province of those not literate enough to defend their position in a lucid and cogent manner. I suspect that the Nazi (not the euphemistic full 'National Socialist' name that you now use in this post) reference was used because it was the only card left to play in an otherwise empty hand. Due to the atrocities committed during WW II, the word "Nazi" has severely negative connotations for a large percentage of the world's population, reaching beyond the Hogan's Heroes-esque usage that you recognize and reminding them of the horrors of that regime, for many in a very personal way.

But, an educated man like yourself would know that, now, wouldn't he?
:)

Leo

all true, accepted as submitted.
However, if the premise of your argument is that my approach offended
everybody
so it reached no one, you are incorrect. In fact, i'll hazard a guess that
it offended
1, mabye 2 people; the remainder that have jumped onto the bandwagon with
this
person were disingenuously doing so, only doing so since it helped thier
private
little war and pet cause...

I will also hazard the guess, and free of much apprehension in doing so,
that the
vast majority of people that read it (who I WAS likewise posting to, for
reading)
didn't drop to the ground in gut-wrenching revulsion to the point that the
point
was lost. I don't think it was lost on anywhere NEAR the people you would
have me believe. On the contrary, what I DID in fact do was help to remove
some of the window dressing of your (read: PCTA crowd) arguments, strip
away the pretty, "happy fuzzy bunny" covers that are often used to hide
the REAL core of the argument.

And, as you've read in this thread as well as newsgroups, others have
recieved
it wide and clear- albeit, to YOUR chagrin, but so be it, such is the way of
socratic dialogue... and that is this-

"I had to do it, so should you."

Furthermore, there is the DISTINCT possiblity that the following is true,
but

i'm not pushing this point as it is moot and would achieve nothing- the unspoken
total truth may lie somewhere in,

"I had to do it, those of my peerage and common interests likewise didn't have
enough spine and nerve to speak our minds on the issue, so we feel that by
doing so yourselves you are QUITE insensitive to the interest of protecting
our feelings and reputations, so we kindly request you to lay down the banners
of your cause, surrender, and just do what you are told as well. We don't want
anybody offended."

Quite a thing to be proud of, indeed.

Just let us who are willing to carry the banner and lead the charge do so; just
sit back and relax; the willing and able bodied among us will take care of
everything.

The same applies to students of all ages. When an adult goes to college, they can select which area that they are going to get a degree in. Once they make the selection, they have no choice in the basic classes only in the electives that follow the basic classes. For example, all the engineering curricula at the university I attended required all engineering students to take a basic electrical engineering class. If I had not taken it, I would have been denied my degree. Well in my engineering career, I have yet to use that material since I am not an electrical engineer.

So a person can choose to be a ham (i.e. choose to be a mechanical engineer). They cannot choose which material is required to be a ham (or mechanical engineer). The curriculum has to be set by an experienced person.

No-Code Licenses should come a designator following there Callsign, that lets people know there status.
Such as W5TIT-1, or W5TIT-2, that way we will know if they are Mentally Challenged Operator, or a Lazy Operator, 1 being Mental, 2 being Lazy, that way we would know which ones not to talk to.

A definite pro-coder tried to connect the Holocaust of WW2 to morse
code testing...with himself as the "outraged victim of oppression."

Did I say he was suspect of illegal drug abuse? I take that back.

I say he now exhibits symptoms of severe mental imbalance.

Never inspected the plaque (my dentist scraped it off...). Things have changed more since construction on the highways leading up to the Tacoma side has been completed.

> The bridge was much more interesting in the mid-70's. At that time, the
>side walls were cross-crossed metal strips allowing for a fairly

>plates and the roadway grating has been replaced with asphalt.

Really? Then its been remodeled since the 70s. Wife and I have driven over it many a time also, but we can see the Narrows on both sides from a compact wagon. Bridge roadway is both grating and concrete now with what appears as non-slip asphalt surfacing?

What I think more interesting is the western side of the Narrows bridge with three HV lines spanning the Narrows in a single run, each about a mile in length. No catenaries, just the lines. They've been there for years surviving many a windstorm. Easy to see them from the bridge.

We'll have to cease talking territorially here, Dwight. This newsgroup is only for railroading, gunnery, east-coasties-pumping-their-hoagietowns, and general demeaning denigrations of no-coders by mighty macho morsemen pounding their, er, keys. :-)

I prefer a rose' with elaborate dinners, not the common table grappa in
a peasant cottage.

Sonny, I've probably done MORE in radio already than you've done in
your entire "career" as a hambone...er Ham.

You have PLAYED for years at ham radio, using ready-made
equipment, not really understanding what goes on behind your
ready-made front panels. Where are YOUR accomplishments in
amateur radio, your name posted as anywhere involving advancing
anything of the amateur state of the art? On FIDONET? Words,
self-glorifying yourself. On this newsgroup? More words, more
self-glorifying of yourself...plus an extreme amount of patronizing
"I am your moral superior" preacher without a church.

Yes, without a church. Up in Newington you couldn't be "honored"
when you showed up at their door so you upbraided ARRL for not
treating you as royalty. The Church of St. Hiram rejected you!

>
>Well, at least I'm a True Believer in something useful, unlike Lennie,
>who only "believes" in sitting on the sidelines, throwing rotten apples
>at those who are acquiring and utilizing useful communications skills.

Poor baby...someone threw a rotten apple at you and its worm also turned on you?

Sonny, you've had your morse blinders on so long you can't understand what others are saying, have said, and explained to you in detail.

Manual radiotelegraphy is NOT a "useful communications skill" anymore unless you are a cult morseodist. Morse code is in its 159th year as a slow, often error-prone technically simplistic communications tool. Only a minority of amateurs use it. Morsemen are required at each radio circuit end to make it effective at all.

I learned several kinds of RTTY and TTY over a half century ago and USED them...including one that had 4 TTY circuits on the same FSK transmitter. You think Martinez' PSK31 is "new and revolutionary?" Fine. Enjoy it, but it is an innovation intended for real-time AMATEUR teletypewriting, not as a state-of-the-art telecommunications method. I've set up and done 9600 Baud over a high HF circuit that all the nearby amateurs scoffed and refused to believe when it worked successfully.

I've done far more modes/types of radio circuit modulation than is allocated to amateurs and am engaged in some DTV test work at the moment. No DTV is yet allocated to amateur bands. You've not done "matched filter" multichannel since that isn't allowed in ham bands either...takes too long to explain it to you so I won't bother...you've not shown you can handle Ohm's Law successfully, let alone understand a cosine-squared pulse shape.

Sonny, I've done radio communications from land in many places, from the air while in a cockpit as well as cabin, on HF from the cabin of a moored sailboat...the latter just a few months ago. NDAs forbid my mentioning more, but you wouldn't understand the principles anyway. All kinds of neat, new things, including not mentionable due to Title 18 USC.

At NO time was there ever any need to use morse code or demonstrate morsemanship to successfully communicate. Not in a half century of work that began with 24/7 primary communications service over HF trans-Pacific. Never. Nada. Nyet. Nicht. No morsemanship needed at any time.

Any you've done what? Playing with your radios, doing your beeping thing the same as what was done by amateurs a half century ago or a full century ago? What kind of "new technology" is on-off keying code use? Who are you trying to fool other than children, fool?

Well, Dwight, having had a "baptism of fire" to this newsgroup under barrages from Jim Kehler, KH2D, I've decided to use the same sort of thing now. Kehler is probably still ailing and lives on the mainland now, hasn't been a regular in this newsgroup for years.

I'm still puzzled by the pseudo-Victorianism of so many younger Americans who have to be so prissy and correct in written language. I was puzzled a half century ago and still find it odd.

We "can't" use the word shit but have to spell it "sh*t" as if the little asterisk "cleans it up." :-)

>> All Dwight said was that "your words reek of bigotry, elitism, and

SELECTIVE use is quite true.

In Roll's case, the amateur radio license class probably has very real
meaning to his life's worth. It is an Accomplishment of high personal
value and an excellent reference point from which to sound the superior
moral-ethical sermons to enoble himself.

>> The FCC regulates and licenses ALL civil radio in the USA...
>> yet none of the staff nor commission of the FCC are required to
>> pass any morse code test in order to regulate US amateur radio.
>
> Of course, that should be obvious. But Larry's position benefits him
>more - if accepted, it would undermine all those with different views on
>this subject. Clearly, only those with views similar to his would accept
>such a premise.

The Fraternal Order and/or Religious Cult feelings about amateur radio
seem to override logical or common-sense thinking about licensing.

The BELIEVERS almost always cite their own accomplishments as the
role model for all to follow. They are the self-imposed moral standard
bearers and expect all others to follow...or the others will be damned.
Almost a religious zeal.

What is so curious is that the most zealous of code demanders have
absolutely NOTHING to lose in their license privileges. Except an
enormous self-pride by diminished status and rank. The overly pridefull
are immediately seen as hypocrites if they rationalize their view as
being "the proper one for amateur radio."

>> You seem dumb and dumberer to the fact that every other radio
>> service (except a small part of maritime radio) in the USA has either
>> DROPPED morse code (snip)
>
> Actually, as you may know, even the International Maritime Organization
>(IMO) voted in 1998 to eliminate Morse Code. The Coast Guard itself dropped
>code in 1995. As a result of these two events, the Coast Guard now urges
>commercial vessels not to use code since CG personnel, and an increasing
>number of radio operators in the maritime service, may no longer have the
>skills necessary to communicate using that system. The UN-chartered IMO is
>responsible for defining and regulating international maritime
>telecommunications. It's positions are adopted by the ITU.

Some morsemen in here have angrily admonished me for not mentioning
Great Lakes shipping as requiring commercial radiotelegraphy licenses!
;-) Gosh, all sorts of facts and figures on that! Of "vital importance?"
I don't think so. Rail transport is the big thing in shipping in the middle
of
the country, followed closely by trucking. Neither transport ever used much
morse code. :-)

I find it curious that so many amateurs in here haven't bothered to educate
themselves on the vast "other" world of radio. The Internet is a marvelous
tool for that. The IMO is there, SOLAS is explained on the Net, anyone
can get part way into the ITU (many documents are available only to

members), all the government agencies are on the Internet now. There are "tons" of information sources there, most manufacturers of electronics offering vast "extension courses" through Application Notes and things. Most radio amateurs seem content with going to a single source for information: the ARRL website. It is known, it is familiar, but the ARRL does considerable selectivity in what it presents there. No one can expect them to say much about that vast other world of radio...so those who only frequent the ARRL will remain ignorant.

The only thing that is left for the PCTAs is to rationalize "I had to do it so you have to also! Because..." :-)

ANY time you PCTA get off your respective high horses, acting like
god-given superiors in radio just because you took a morse test and
passed.

Amateur radio is a HOBBY, Mike. It isn't professional radio nor
military radio, is NOT a "service to the nation" like the military or
government or charity organizations.

You don't get special dispensation for acting boorish and arrogant and
judgemental about others that disagree with your opinions.

All your callsign enables you to do is to transmit RF energy on certain
allocated frequencies using a limited number of allocated modes of
communication. It does not give you godhood or royal title or any
measure of intelligence. Some of you think you are entitled to act like
assholes...then get very put off when others object.

Use some tissue and wipe yourself off...

A "manager?!?"

At Anonymous Electronics, Inc., no doubt.

As a career electronics design engineer I never had a Real manager
who wanted to hold on to the past for dear life...or make either work
or life experience some kind of "test" for "moral qualities." Do the
assigned work successfully and one gets paid...a test every week.
I passed all of those. Took some doing but it was done.

At NO company was there a willingness to hold on to the PAST in
methods, standards, or behavior. If there was a BETTER way to do
something, we tried to do it. That took much more work, but was very
satisfying when we did it.

Amateur radio is NOT professional radio, true, but I fail to see all the
moral indignation over those not caring to learn morse code for a ham
license. Sorry "Leo" but a half century ago I did 3 years of military
radio communications on HF, trans-Pacific, without ever having to use
morse code or be required to know it. It wasn't needed then, it isn't
needed now to communicate on HF radio.

WRC-03 removed the old S25.5 requirement...at the urging of the IARU
and several countries. ARRL still refuses to take a stand on the code
test. Seven or eight nations of the world have dropped code testing for
ham licenses. More will follow as COMMON SENSE dawns on ham
radio regulation.

If you start cackling about "traditional values" and other homilies about
code testing "always a part of amateur radio," then YOU lost it, not the
NCTAs. You cannot be some kind of moral superior for demanding that
"everyone else has to do it like you did."

Alun, I saw the light.

Many years ago.

A small light, flickering in the growing wind of many other faster, better,
easier-to-use modes.

It went out.

>By eliminating the testing requirement for Morse code, we are seriously
>undermining people's freedom of choice.

Incredible illogic!!!

>Choices need to be based on sufficient knowledge of the subject.

The FCC determines what is necessary to pass THEIR requirements
for an amateur radio operator license.

>Morse code is one of those areas where
>a person needs to learn the basics and experience it before they have
>sufficient knowledge.

Tested morse code proficiency was required by the GOVERNMENT
in the early days of radio for the first US radio regulatory agency.
Back then, on-off keying codes were the ONLY way to communicate
using early primitive radio. The GOVERNMENT's main reason for the
code test was so that all radio operators in all radio services could be
contacted in order to mitigate radio interference.

This is the year 2003, not 1912, not 1896, and not 1844 (the first year
of commercial code use on the Morse-Vail telegraph system). The
FCC stated publicly 13 years ago that the morse code test was NOT
a real requirement to determine if an amateur should be licensed. The
FCC stated that the only reason for retaining the code test in 1990 was
due to ITU-R S25.5.

Most of ITU-R S25 has been rewritten at WRC-03 and there is NO
international requirement for all administrations to administer any code
test. The new wording of S25.5 allows each administration to evaluate
the code test retention within that nation.

>Keeping the test means that individuals will have a
>better knowledge base upon which to choose whether or not to pursue Morse
>code to proficient level.

Illogical reasoning. Licensing of radio amateurs in the USA is regulated by the FCC. It is not regulated by any "ARS community." It is not regulated by any amateur radio membership organization.

There is absolutely NO radio theory imparted by skill at morse code and it does not serve any purpose in the FCC's determination of whether or not an amateur radio license applicant should be granted a license.

>No one is required to use Morse code after learning it.

Then there is NO reason to subject all amateur radio license applicants to any morse code test, is there?

My first wife was Reform Jew. All her older relatives made it out of
Germany via Denmark. I've talked with them at length at the time
and also with many others in the same situation. In the Fairfax area
of western Los Angeles. She died in late 1964, a cancer victim.

Are you now going to "lecture" me on the Holocaust of WW2? Are
you now going to assume some kind of superior moral attitude about
"ancestry" because you have such weak arguments on the retention
of morse code testing in an avocational hobby activity involving radio?

May your conscience be forever burdened by the souls of seven million
who died when you profess some kind of outrage in an argument over
code testing. That is a pathetically weak, petty connection you make.

There are several Centers for the Holocaust around the USA. I would
suggest you visit one and spend some time there and reflect on the
reality of that dreadful, terrible happening over half a century ago.

Yarmulke is optional during a visit. Carrying a code key during such a
visit isn't required.

To quote the title of a book you probably don't like very much, Larry,
"Now You're Talking!"

I was guilty of as much of that as you or anyone else in here,
especially back in the 1990s when I first discovered Usenet. I'm sure
some people here have looked up the current call, noticed the
"formerly" call, and made the connection. I'm sure they've also

noticed that I've managed to keep my propensity for ripping people new excretory orifices in check - except when certain ham-wannabe outlaws from CB and the Freeband frequencies come crawling in here on their hands and knees and beg for it, in which case I'm more than happy to oblige, and still plenty capable, too.

Likewise, OM.

Glad to hear it, too. You have a good head on your shoulders. It'll be interesting to see what happens when you put it to better use. Like maybe, how we're gonna get everybody on the same page to come up with some sort of test of practical knowledge if FCC dumps Element 1.

>I would like to think that if it were ever possible for all of us to meet
>in person, that that meeting would be both pleasant and enjoyable.

If it was just the hams who are regulars, yeah, no doubt. If all the trolls showed up too? You gotta be kidding me. We'd need the National Guard there to prevent a riot.

>And, as we continue to batter each other's opinions, I think it is

I, too, am likewise shocked.

From what i've learned, when all of society collapses, we retreat back into clans and
have to forage for food and struggle for basic survival, it will be the great morse code gods that will light the torch and the way back to civilization.

What I don't understand is how civilization has managed to stay together through
the tribulation without widespread knowledge and use of morse code, made possible only of course by morse code training.

Len, how DARE you point out the fact that times change and that the needs
of a public utility and hobby are to change to meet those needs. I think it
lacks understanding and sensitivity to the feelings of the PCTA gestapo
on your part to prove that with the passing of years, requirements
to meed modern demands likewise change.

I am flabbergasted; i'm taken aback. I just am overcome with such
frustration that I do not know what to say.

You know Dee, there is some real wisdom in that. I think many people would be served well by having an HF contact - possibly their first - at the time of testing. It would get that first contact out of the way, it would possibly calm the person down and be a little bit of fun, and would really keep people thinking about good on the air procedures and manners.

It would also be enjoyable to be on the other side of that QSO. I would suspect that an Op that was a volunteer "first contact" would be a part of the VE team.

What a nice/good idea!

But, to answer your question: did you
> do something illegal? Of course not. Insensitive, foolish and
> intellectually bankrupt, perhaps - none of which are punishable
> offences.

AH... nice dodge.... as you see, the very point of bringing up
the fact that "freedom of speech is frequently curtailed today,
such as the following examples..." would ONLY be brought
up to imply that what I did was NOT protected by the concept
of freedom of speech.

I put it to you; if this is NOT the case, if there is NO insinuation
of same, then WHY bring up the fact that there are certain
extreme cases where free speech is limited or halted, when I claim
the right to do so? Just for the purpose of conversation? I think
such a claim is paper thin and WEAK at best.

I suspect that the Nazi
> (not the euphemistic full 'National Socialist' name that you now use
> in this post) reference

the two are the same; but I digress, I am not sure what point you
are making by trying to distinguish the two

was used because it was the only card left to
> play in an otherwise empty hand.

and at THAT point you are no longer discussing fact and are in
fact using opinion. The truth of the matter is that the PCTA crowd
is long out of factual support and credible reasoning to keep
the morse code testing; they abandon any further hopes now
with all sorts of dodging tactics- and if, by the way, you find
resentment to the use of nazi, I likewise, would find resentment
with the discriptions "too lazy", "dumb", "stupid", and "moron".
HOWEVER, instead of dropping to the ground and kicking
my feet and clenching my fist and screaming as a child does
when it's bottle is taken away, I am continueing the debate.

Due to the atrocities committed
> during WW II, the word "Nazi" has severely negative connotations for a
> large percentage of the world's population,

okay, you get the "DUH" award of the day for that one. KEEN grasp
of the obvious.

reaching beyond the
> Hogan's Heroes-esque usage that you recognize and reminding them of

> the horrors of that regime, for many in a very personal way.

believe me, I was not reaching for a humorous or laughable reference.
My use of a "will not accept change" analogy was intended at the latter
reality of the regime, not the former comedy that you referred to.

however, it was your right to enter the conversation, even if you
had nothing new factual to add, and you may continue doing so.

Care to point out the color of the grass and the sky now?
</reductio ad absurdum>

>

I share the outrage. I'm am seething with contempt. Um, what total
"jerks" they are. How insensitive.

Oh, by the way, i'm going to hypocritically overlook the fact that I
called THEM jerks, but when they use a referencing adjective
on me, i'm going to claim they have an empty hand on thier side
of the argument so that's the last card THEY have to play. But it's
okay for ME to do it.

And since I had to do it, so should YOU! Oh, wait, that's conflicting
with my previous remark.. oh, i'm so confused..... I want to
say one thing when it supports my argument on the one hand, but
I want to ignore and refute it when it doesn't on the next.....
Perhaps I need to go get a dictionary and look up this "logic" thing
and learn about it.

4847. It starts with the basics

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-21 23:11:22 UTC
From: Clint <"rattlehead at computron dot net">
Message-ID: <vmsc1d1ec9r858@corp.supernews.com>
Source record: 78260

It all starts with the basics.

Before there were DVD's and compact disks, there
were casettes. Before there were casettes, there were
8-track tapes. It had to start somewhere; the way in
which analog music is written upon 8-tracks is
a fundametal aspect of music/sound reproduction.

Therefore, a person can't possibly know what he likes
in terms of products and how to spend his leisure time
unless he starts at the beginning and learns. He can't
possibly do this on his own; libraries, the internet,
dictionaries, encyclopedias, documentaries and the like
are not accessible by him. He must have instruction
FORCED upon him.

To facilitate this, we need to petition the governement
to start requireing classes in the skilled use of 8-track
tapes before he can go anywhere and purchase a
casette, CD, DVD or any other device that has
written/recorded music upon it. He can't possible, of
his own powers and via his own free will, make
decisions for himself regarding modern media and
musical reproduction systems. The Pro 8-track
tape crowd, or PETC, must stand it's ground and tell
them that that's how WE had to do it in the 70's,
so, therefore, that's who THEY should do it. All
retailers will be required to ask for documentation
proving you've passed an 8-track tape tutorial
before selling patrons the products of thier choice.

We're fair, though; we will not force them to USE
8-track tapes, or even purchase an 8-track tape
player. They can use them if they like or if they
dislike. It is the stated purpose of the PETC simply
to require them to undergo training and pass a
profeciency skill test in the use of an 8-track tape,
since this is a basic in listening to music, and everything
in the last 30+ years has stemmed from that.

If a consumer whines and complains that he should
be allowed to purchase whatever media type that he
feels is to his likeing, for whatever reason he states,
he will of course be labeled as lazy, stupid, dumb,
and wanting to just have things given to him for free.

After all, it all starts with basics.

</reductio ad absurdum>

Your incorrect usage of snippage really hurts your comments. My point was to show that adults are often required to meet standards set by people who are experienced in their field of choice. This means taking courses in college for example, that the student may never use. This is similar to requiring hams to take and pass code tests.

Electrical engineering is not ham radio. Although they don't study code, all of them have to take subjects in which they have no interest and will never use otherwise they don't get the degree.

Adults are required to do things they don't want to on a regular basis.

Wrong again. There never was a designator specifically for no code
licensees in this country. It is and always has been impossible to tell
from the call sign alone whether a person has passed the code.

Dee he wouldnt know, he doesnt have a clue.

4852. IARU Says "Remove Code"

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-21 23:56:01 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <IUqbb.6747$yp6.101434@nnrp1.ptd.net>
Source record: 78264

IARU Says "Remove Code", (Excerpted from the ARRL Letter)

"The focus was on the future when the International Amateur Radio
Union Administrative Council met September 6-7 in Amsterdam,
the Netherlands. In the aftermath of WRC-03, the council urged
IARU member-societies to call to the attention of their administrations
"the desirability of adopting specific changes in their domestic
regulations for the amateur and amateur-satellite services, so that
they will be consistent with the revised Article 25 of the international
Radio Regulations."

In that vein, the IARU governing body called for the removal of Morse
code as an examination requirement to operate on HF.

The council reiterated its stance first taken in 2001 that Morse code
proficiency "as a qualifying criterion for an HF amateur license is no
longer relevant to the healthy future of amateur Radio."

"IARU policy is to support the removal of Morse code testing as a
requirement for an amateur license to operate on frequencies below
30 MHz," the IARU Administrative Council resolved.

*****
I particularly love that last paragraph .. they're finally moving from
the past into, at least, the present.

What? The last call I had before I got out of amateur radio was N2JH. That was *not* a no-code ticket! My licenses were WN2CJV, WB2OSP, WA3RJX, N2JH, and now AA2QA (after deciding to get back into amateur radio and simply testing out in one session - with no code copied between 1969 and 1993 except for the fact that I couldn't help but copy the Morse sent in the movie 'Fantastic Voyage'). Starting with WB2OSP, all were extra class tickets at 20 words per minute.

73 from Rochester, NY
Jim AA2QA

Hmmm ... I've been proudly no-code since upgrading to Technician, then General, then Advanced back in the 70's. ... after a grand total of *1* CW contact as a Novice and none since. Yeah, I studied for and passed the FCC-administered 13wpm code test back then. But, I consider it a silly little requirement for joining our exclusive little club.

So, I guess that means that I should add a "-2" after my call when I ID, huh? I'm pretty sure that I'm not "Mental" (though the fact that I'm actually responding to this post is strong evidence to the contrary) since I graduated from college with a 4.0 GPA with a major in Computer Science and a minor in Electronics Engineering Technology.

Don't get me wrong, I highly respect the people who use CW, and I think it's use should be encouraged. Considering its value, you can hardly do otherwise. And, yes, I believe that the CW-only portions of the bands must be preserved.

But, to require it for licensing makes about sense as forcing every driver's test to be passed in a car with a manual transmission. What's the point on testing someone on something they may never use again. If, some day, they see value in it, let them go learn it.

By the way, a few weeks back, I decided that I'm going to hit the books again and go for Extra before the end of the year. Yeah, it's a silly pride thing since I'll likely never actually use the little band slivers that I don't already have with Advanced. Besides, then I'll be able to step forward publicly with my feelings that Advanced and Extra should go away ... that an entry level class (Novice?) with low power privileges in all bands and a higher (General?) license that gives you everything are all the classes we need. Anything higher, like my Advanced and the Extra I'll have soon is just vanity. Let the ARRL create awards for folks who pass tests demonstrating a higher level of technical skill.

Bob,

This is the model that Canada moved to in the 1990s, and morrors the CEPT structure to a great degree. We have two categories - Basic and Advanced. Morse can be added on to either. Basic gets you full privileges above 30 MHz, with power restrictions (560W PEP on SSB - not much of a restriction!). Morse adds on full access to all of the HF bands. Advanced adds on full legal power capability (2,250W PEP), the ability to build or your own transmitting equipment and operate a club repeater, be a VE, and a few other goodies. Only one call sign is issued (exception below...) - it is assigned upon receiving the Basic licence, and is good for life. No renewals or fees are charged. When you upgrade to Advanced, or add on Morse, a new certificate is issued, but the call remains the same. The only time the call sign must change is if you move to another area in Canada (i.e. VE2 moves to VE6, you must apply for a new VE6 call sign).

Those who held one of the older qualifications are automatically transfered in the licence database to the appropriate new licence category..

A lot cleaner and cheaper!

73, Leo

Besides, then I'll be able to
>step forward publicly with my feelings that Advanced and Extra should go
>away ... that an entry level class (Novice?) with low power privileges
>in all bands and a higher (General?) license that gives you everything

the code can be learned. It's not hard at all.

It's just not necessary to FORCE people to learn it against thier
will; it's not at all necessary to modern day use of ham radio.

That's all.

Those calls were not issued on the basis of whether they had or had not passed a code test. Those call signs were issued to people who had passed General and Technician with code as well as no-code Techs. There is NO way to tell from a call sign whether they passed code as the call signs were issued on the basis of license class only.

Dee D. Flint, N8UZE
(an original N call issued when I passed my Tech with code in 1992. I have never held a codeless license).

N calls were issued to Generals, Techs with code (Tech +), and codeless Techs. It did not indicate whether the person passed a code test or not.

When I took my original license testing, I passed the Novice written, Tech written, and code. I was issued an N call (which I still hold today). I never held a codeless license.

But my reflexes are rather slow. How else would you have me do it?

There is no contradiction as you seem to
> imply.

I respectfully disagree.

At characters speeds of 13wpm, one can avoid the trap of counting
> and lookup and learn to respond reflexively ultimately leading to mastering
> higher speeds.

I don't want to avoid the "trap." I couldn't get to 13wpm, that's how
I became a Technician - the consolation prize for almost General.

> Using a method that encourages people to count the dots and dashes erects a
> barrier to going on to higher speeds.

Perhaps, but there are generations of hams who did it that way. How
can that be explained if what you say is the only way?

Why use a method that creates
> hardships that will cause a person to have to start over with a new learning
> process if they should want to use it?

Because that is the method that was presented to me to learn code
with. I bought the ARRL "Now You're Talking" Novice course with 5wpm
code tape. Then I bought the ARRL 5wpm tape kit and the ARRL 13wpm
tape kit. I even got on the 40M Novice subband, but there wasn't much
to hear.

The teaching and learning of any

> And by whom? Do you hear voices? Did they do it?

and I QUOTE...

from leo, on sunday september 21, 2003 @ 10:25am,

<cut and paste>

Good point, Mike. The concept of free speech is a basic tenet in any
democratic society - one needs only to look as far as the former Iraq,
where open disagreement with a government policy could buy you a quick
ticket to the next world, or at the very least a personalized basic
electricity course.

But free speech does not mean that any simian with a functional larnyx
is permitted to publicly say anything that he or she wishes - for
example, the holocaust deniers and the KKK have proved that point
quite well in recent history. Slander and libel laws are another
example of limits on 'free speech', intended to mitigate and assign
accountability for the damage that it can cause if out of control

<end paste>

okay, now, read carefully and LEARN...

My response previously was that I didn't say or do ANYTHING
that falls within the realm of being controlled by the government.
I didn't say anything slanderous or that could be called libel.

SO why bring up all that diatribe, especially the second paragraph?
HM? is there any point to that, other than to insinuate that just
maybe I don't have the free speech protection to speak my mind?
or why ELSE bring it up?

You can't dodge your way out of it. It's obvious. You're just
upset that you were exposed.

>
> Not really - one carries more negative feeelings than the other. As

> you know.

that is YOUR assessment and YOUR opinion, but the facts are,
and you cannot deny it, that nazi is a slang abbreviation for
national socialist. I won't argue that point with you anymore;
if you even speak of "negative connotations", well, connotations
are by DEFINTION subjective and therefore not anything that
can be cast in stone as a fact of civil law or physics.

Now, continue pointing out the colors of grass and sky, and
feel proud that you have done so.

You made the same error of interpretation that your buddy Bill Sohl
did. Nowhere within that
document does it say they want to remove all code testing. If FCC should
allow a single category of
HF license to be issued and retain code testing for all others, that
would satisfy that blurb.

Sorry, that's the way it is.

Your persistence is either spinning this or mis-interpreting it
yourself is mind-boggling. To begin with, it's not even the IARU talking,
it's the ARRL; "(Excerpted from the ARRL Letter)"

Here's what IARU says _themselves_:

http://www.iaru.org/rel030912.html

"3. The Council revised an existing Resolution concerning the Morse code in the light of the WRC-03 decision to leave to each administration the question of whether or not to require a demonstration of Morse skill to operate below 30 MHz. Under the revised Resolution, IARU policy is to support the removal of Morse code testing requirements."

No weasel words there.

Oh good heavens, no! Pasta, or steak, and a glass of fine wine or a frozen margarita. Beer and BBQ is a Texan thing and, while I'll drink an ICE COLD beer on a hot day outside--you won't find me outside much in the Summertime around here. BBQ? It's OK. But I prefer no flavorings on my meat.

Gladly, we don't live in a trial and error world today. I would hope the bridge designer would have enough knowledge to build a safe bridge without having to watch one (perhaps this one) fall down first. People can learn about the specifics of a subject without personally experiencing every aspect of it. We generally trust that system for a great many things in this world today (for example, the bridges we routinely drive over).

If that were true, I think a test requirement is the worst way to accomplish what you're seeking. Instead, a better solution is to find ways to attract new people to that aspect of ham radio. You're obviously not going to have much success with that effort today because "no coders" have made their choice about code while focusing solely on the license requirement (the license requirement dominates the issue in their minds). Later, when that license requirement is gone, the mode itself becomes the focus. At that point, I think many more will be interested in taking a second look at code. Obviously, there is no way for me to prove that now, but I just have a feeling about this (perhaps the same way you have a feeling about the above).

If you firmly believe hams don't need to know theory, then
petition the FCC to end theory knowledge as a test requirement.
If you don't then your argument is just a means to divert
the issue to arguing a different subject.

> I'm not required to know how my cars work, just how to use them safely. I

Carl,

As you know, I do not support continuing the Morse exam. Other well meaning people disagree with me and I respect their disagreement.

It is a puzzle to me why you continue to make a point of "rubbing peoples nose in it". Perhaps "well meaning" doesn't apply in your case.

Hans

It isn't relevant to anything outside the Amateur Radio today, Larry.
That's exactly why there are efforts being made to eliminate the Morse Code
test requirement. Those efforts extend throughout the world, including the
recent ITU vote to allow more flexibility on this issue.

Clint, my friend, you are indeed your own worst enemy - your interpretation of clear and concise English is amusing indeed. especially the "if you can't get 'em to understand your point, repeat it over and over until they do" strategy - that's certainly a winner!

But, in closing, I'm reminded of another quote by an anonymous author - sage advice, though, in dealing with you on this issue any further, and I shall follow it now:

"Never argue with an idiot. They drag you down to their level, and beat you with experience."

QRT, my friend - our 'conversation' (sic) is now concluded.

Game. point and match.

Be Well,

Leo

Here in Canada stand firm with you on that one - that was by far the greatest tragedy to befall the US (and North America) in the history of the world, and certainly cannot be condoned. You will find a contingent of Canadian soldiers in Afghanistan with your troops right now, as they have been for almost two years, working with you to hunt down and destroy Al-Qaida. There is no safe haven here - this country has no tolerance for terrorists. Neverless, people do get in who should not get in (in the US as well as here) - you can't stop them all.

However, this was am Amateur Radio thread, and your comment was off topic. And, as a Canadian, I do take exception to the oversimplification that the terrorists all come through here due to our incredibly lax immigration policies - if that were true, the Canada - US border would be (and should be) sealed and guarded to end that from happening. I live a mere 45 miles from the border, and it is as open as it ever was (although more vigilant in checking IDs in the computer systems, in both directions, into Canada as well as the US), so I assume that the threat cannot be that great. It has never been conclusively proven that Canada is an entry point for the terrorists (it was suggested just after 9/11, but disproven later). And, even if they do enter the US at the Canadian border, do your Customs guys just rubber stamp their visas and welcome them in? I don't think so...

Let's stay on topic, and remember that we are both neighbours and brothers in this issue!

To further expand (and you should know this from having studied for the
exam):

2x3 calls beginning with W, K and N are assigned to Novice class licensees
and higher. All the Ws available in the sequential assignment are used up.
However some vacant calls are available via the vanity program. We are
currently in the Ks. It will be some time before these are used up. When
they are, calls will be assigned from the N block.

1x3 calls beginning with W, K, and N are assigned to Technician (both with
and without code) class and General class and higher. All the sequentially
assigned calls have been used up. Some vacant calls are available via the
vanity program. No distinction in the call sign is based on whether or not
the Technician has passed the code. So today, new licensees with or without
code will receive a 2x3 call beginning with K.

2x2 calls beginning with W, K, and N are assigned to Advanced class and
higher. Again all the sequential ones are gone and only some vacant calls

are available via the vanity program.

1x2 and 2x1 calls beginning with W, K, and N are assigned to Extra class only. All the sequential calls are gone but there may be some vacant calls available via the vanity program.

2x1 calls beginning with AA through AL are assigned to Extra class only. Again all the sequential calls are gone with perhaps some vacant calls being available via the vanity program.

2x2 calls beginning with AA through AL are assigned to Extra class only. These are still available in the sequential assignment and available calls may also be requested via the vanity program.

The no-code techs that you know with N calls simply received their calls when the N block of 1x3 calls was being used for the Technician (coded and no-code) and General class licensees.

I did a writeup on how that sort of test could be done. All it would take is a couple of QRP rigs and some dummy loads (wouldn't actually have to be on the air).

But NCVEC would have a cow. Too much of a "burden".

>In Europe, mostly the old Iron Curtain ones, required a certain amount of
>SWL time. Documented etc.

Even more than that. They required that a prospective ham actually BUILD a receiver of a certain complexity from scratch, then use it to receive and log a certain number of stations and countries using both 'phone and CW. They'd have to explain the receiver's design, construction and operation, too.

Once all that was done, they'd get a beginner's license and authority to build a transmitter of a certain complexity and power. Which would then be used to make verified contacts in order to earn an upgraded license.

There were also written and code tests, of course. But those tests alone would not earn a license - those hams had to build their rigs, then demonstrate understanding of their theory and operation as well as actually use the dern things.

What a concept.

By that logic, anyone who proposes any sort of legal requirement that is "against a person's will" makes you shudder.

For example, speed limits on highways. Or requiring children to go to school.

How about band edges? Power limitations on transmitters? Mode restrictions like no 20 kHz wide FM voice on 20 meters?

Here's a thought for ya, Clint:

Suppose NCVEC and NCI have their way and Element 1 is just dropped. Poof, no more code test. There's a good chance that will happen, too. Some would even say it's a slam dunk.

Then suppose a group wants to do away with the Amateur Extra and General licenses and their written tests. Suppose this group says the idea of requiring more written testing against their will simply makes them shudder. Forcing all that theory stuff on them....terrible, just terrible.

Will that make you shudder?

So sad.

To rephrase - the technical abilities of Farnsworth, the gentle persuasive manner of Mike Tyson, and...well, just old. Old and tired - highly trained on a generation of once high-tech equipment that long ago was sold off as surplus. And to have endured the indignity of becoming 'surplus' as well. But here, in this forum, a giant - full of wisdom, and lord over all. Important, once again - and with (probably for the first time in years) - an audience. Folks to disagree with. Folks to control. Folks willing to ask for his advice. Folks willing to submit to his wrath. Power. Vitality. Youth. Importance. Just like long ago. Just the same!

Sad, old man - it's merely a figment of your own creation, not reality, not tangible, and can never bring back the past glory of your career. Or days gone by. But, in here, in the security of this Usenet group, it feels so real....and so much better than the reality of advancing age, and the lifestyle changes that they will ultimately bring.....

Be well, OM

Be well.

Leo

Larry, I know you are not so dumb as to not know how Morse Code/CW has fit into the history of Amateur Radio and how Amateur Radio has fit into the other radio services throughout that history. Knowing that, your request above could only be considered factitious. Therefore, I will treat it as such.

> (snip) And, since everything I'm discussing here is related
> ONLY to the Amateur Radio Service, that's the only group
> of Morse/CW users who are being considered by me in any
> of my postings. (snip)

Well, that may be what you're discussing, but I'm discussing Morse Code testing - a discussion which, by it's very nature, cannot be limited to just Amateur Radio. However, if the discussion were limited to just Amateur Radio, your arguments would have no more weight since most ham operators today don't use code/cw on any routine or regular basis. There is little reason to maintain testing for a mode that is seldom used by more than a relatively small minority.

Some also seem to miss the fact that nowhere does it say that the FCC *must*
eleminate code testing for any class of license. It is only that the IARU
"supports the removal of Morse code testing", it does not state it must be
removed.

>
></reductio ad absurdum>

Clint:

Yup, you've reduced your argument to the level of the absurd, all right! Unfortunately, it didn't prove or disprove anything with regard to code testing requirements in the ARS.

Amateur radio operators have always dealt with the level of technology available at their own particular slice in time. However, the one constant has been the Morse/CW mode, which continues to be a practical, effective, efficient, and universal mode of electronic communication in spite of any and all other modes which have been invented in it's wake. And, as always, radio amateurs are not able to exploit the many benefits and advantages of the Morse/CW mode unless they learn the Morse code. Code testing requirements have always been the means of providing the incentive to do so; in their absence, we will see a decline in the use of this mode in the fullness of time. This is just plain 'ole reality. No tricks of logic will change it, either.

Carl:

Exactly. In the past, we had challenging and comprehensive licensing
requirements in the ARS, which rewarded the attainment of technical
knowledge and useful operating skill with progressively increasing
operating privileges. In the present, and the future, we will have
thoroughly dumbed-down licensing requirements which give away the
whole enchilada with little or no learning or growth required. So, you're
right -- the IARU has managed to bring the ARS out of our past -- and
there's the pity!

Jim:

Peace agreements such as the Camp David accords are not the product of any one man's wisdom or talent. They are carefully constructed documents requiring the work of a large staff of researchers, historians, diplomats, and other government officials. The President just sits there and signs them using a stack of pens while the cameras click away. The fact that there has been nothing but trouble in the Middle East before and since Camp David doesn't speak very highly for that agreement, either. Did it do some good? Sure. But at the end of the day, it didn't even come close to getting the job done. The Palistinians still want to wipe Israel off the map, and the Israelis will stop at nothing to prevent that from happening. This struggle has gone on for centuries, and will last until the end of time. The only thing that could possibly end it would be the total defeat of the whole of the Palistinian people, which, of course, won't happen either. What do YOU suggest?

>Dwight Stewart (W5NET)

Dwight:

Well, I'm glad I finally got your attention directed toward reality. If the Morse code isn't relevant to any communications service outside the ARS, then the fact that the commercial and military services have stopped using it isn't relevant or responsive to the issue of code testing withing the ARS. Therefore, by your own admission, the NCTA's prime argument is just so much worthless rhetoric.

The Morse/CW mode remains as a valuable, basic communications tool within the ARS, and the code testing requirement is current and essential to the continued use of this mode. End of story.

Dwight:

Unfortunately, there is more evidence to support my "feeling" than there is to support yours. With the exception of hams who were trained in Morse code by the military or maritime/commercial radio services, I have yet to meet an avid and active CW user who got that way except through the code testing requirement. And, for what should have been 14 of the best years of my ham radio career, I was one of the "objectors." So, as you say, we can't prove anything now, but I'm not willing to bet that there will be some sort of "epiphany" among former no-coders to go ahead and learn the code and become CW operators when the testing requirement is gone. It just ain't gonna happen!

Newsflash: The FCC was NEVER chartered as an educational organization and the US amateur radio test is NOT an academic achievement.

>Electrical engineering is not ham radio.

Not quite the right wording. Make it: Ham radio is NOT anywhere close to electrical engineering.

>Although they don't study code,
>all of them have to take subjects in which they have no interest and will
>never use otherwise they don't get the degree.

Mommy DEErest, I was USING engineering knowledge at work well before I got my electronic engineering degree. It made classes (most at night) much easier.

I did run into one instructor of the "Prussian General Officer" type who adamantly insisted, in a class on digital logic, that "there is NO such thing as an Exclusive-Or gate." I brought in a quad Ex-Or made by Texas Instruments and showed him. "We will NOT have that in MY class!" he ordered.

This instructor of Asian ancestry was young and had NOT worked in the electronics industry on any digital logic design. Yet, we in the class were not able to use a simple low-level logic device that had been made for over 15 years at that time. I have other examples from my personal experience and that of others in just about every discipline in undergraduate school which do not show a full awareness of academia to that of industry.

Perhaps one out of two electronic engineering instructors at the college/university level MIGHT have worked in the electronics industry at one time. I wouldn't bank on that. One of the excellent ones, whom I've never met, is Dan McCracken, past president of the ACM (I was a member courtesy of IEEE membership).

I digress since: 1. You refuse to acknowledge my postings because I have strong opposite views to yours; 2. You like to play some kind of Mommie DEErest and think that all newcomers to amateur radio are at the level of children.

>Adults are required to do things they don't want to on a regular basis.

Yes, Mommie, but put aside the Mommie suit and THINK in reality. Laws and regulations are NOT required to remain long after their usefulness. That YOU personally like certain regulations is NO imperative that they should be kept, certainly not to any government agency making and enforcing those laws.

Try to remember that US amateur radio is NOT an academic exercise nor is the FCC a college or university administering final exams.

Class dismissed.

> to commerce in the commercial utility communications
> and broadcasting industries, certain government
> regulation makes good sense. (snip)

The only thing you didn't explain with that is a government regulation requiring code testing to gain that privilege. In other words, what does code testing have to do with anything you said?

> (snip) First of all, FCC Commissioners are political
> appointees, not necessarily technical experts. They can,
> and do, depend on the advice of professional technical
> experts, who actually formulate and subsequently make

The original premise still stands - there is no code testing requirement at the FCC, either for the commissioners who regulate Amateur Radio or the technical experts they rely on.

> (snip) However, this discussion is about the AMATEUR
> Radio Service. (snip)

No, this discussion is about the code test requirement. How that applies to Amateur Radio is only one part of that discussion.

"Spark" is outlawed, Larrah.

>However, the one constant
>has been the Morse/CW mode, which continues to be a practical,
>effective, efficient, and universal mode of electronic communication
>in spite of any and all other modes which have been invented in it's
>wake.

Yes. Takes little brains to learn morse, just a LOT of practice...to find that the rest of the radio world does NOT use it anymore.

Your beloved on-off keying coding is no damn good if you can't get your transmitter to work...and then you have to have another morseman at the other end to understand your monotonic beeping.

The only radio people you can communicate with are other morsemen.

>And, as always, radio amateurs are not able to exploit the
>many benefits and advantages of the Morse/CW mode unless they
>learn the Morse code.

Your "benefits" are imaginary. Your "advantages" are imaginary.

You are trying to sell a product that isn't being bought.

You would do better selling snake oil or used cars.

Come to think of it, you probably ARE...

>Code testing requirements have always been
>the means of providing the incentive to do so; in their absence, we will
>see a decline in the use of this mode in the fullness of time.

Oh, is this an ENVIRONMENTAL or "greenie" issue to you?

If the nasty old government doesn't keep up the code test you won't have anyone to play with on the radio?

>This is just plain 'ole reality.

Yes, Larrah, you show a glimmer of understanding...but cannot understand that you are an endangered species which has NO appreciable impact on the radio ecology.

>No tricks of logic will change it, either.

So, bottom line...YOU want a WELFARE handout by keeping the code test so you can parade around like an amateur pooh-bah.

You're weird, Larrah.

Too much monoxide inhalation on that bus of yours.

Missed your other post Alun.

So I'll comment here.

You should have snipped that out, man. It was immediately above your
comment. It wasn't an inane joke. It was over the line, and you repeated it.

Maybe you *don't think PCTA's abuse drugs. Then you should say it.

FCC POWELL SETS STAGE FOR EXIT IN INTERVIEW: 'I HAVE A TIRED FAMILY, TIRED CHILDREN AND A TIRED SPOUSE'
Sun Sep 21 2003 17:25:30 ET

Exclusive Sneak Preview

Michael K. Powell, the embattled chairman of the Federal Communications Commission, appears to be setting the stage for an exit with a candid interview pipelined for Monday runs of the NEW YORK TIMES.

Newsroom sources tell DRUDGE that Powell has gone on-the-record with NYT's Steve Labaton for a wide-ranging explanation of current affairs.

"I have a tired family, tired children and a tired spouse. Candidly, I once said I would be in this job for three years and then leave," Powell explains. "That was three years ago."

"I've been called every name in the book by every opponent in the book," he adds. "That's classic Washington. If you can't get past jingoism, you attack the person. I wish the press would focus on more than who's rebuked and who's rebuking and look at what the best alternatives are for the public in terms of policy."

Labaton was said to be finalizing the text Sunday evening, for a Business section lead, sources tell DRUDGE.

Developing...

As you posted earlier Leo, the claim of suppression of free speech is
alway pulled out whenever the argument is about to be lost - by some.

> you used it anyway? Oh please....

Of course Clint knows the effects. I see the classic newsgroup "I Wanna Fight" personality here. Come in, pick a side, then try to rip the other side a new backside, so to speak. Dehumanize them a little, call them names, especially the N**I name. Then wait for the outrage and complain that they are trampling on your free speech. Then try to justify your calling them N***S by making comparisons like "This guy called someone stupid, so I can call him a N***, after all, it is the equivalent".

Clint doesn't play well with others, and that is just how he likes it.

Let me get this straight. You are trying to say that the above statement
by Cliff was curtailing your free speech?

So what you are saying is that by Cliff exercising *his* free speech, you are having *your* free speech curtailed? This means that you MUST have the right to say what you want, but those with an opposing view CANNOT speak their mind.

Sorry friend, you are incorrect in your idea of what free speech is, and you do not have the right to curtails another's opinion in response to your opinion.

Curtailment of other's civil rights is not one of your civil rights.

I'm setting up my ham station. I just passed my general and I would to be able to operate when I find out what my call is. Do I hook up the red wire from my rig to the plus terminal on the power supply?

My friend, who is a new Extra, says the red wire goes to the minus terminal, but that can't be right because it's opposite of how I hooked my CB. What wire goes where? Thanks

John

Troll Troll Troll.
Any ham knows that the red and black wires are the antenna. The power goes
in on the big round PAL25 connector.

I'm an extra "lite" :-) and the red wire is usually the positive, and
black the negative return.
But I wouldn't depend on anything posted in the r.r.a.p. group, so
either RTFM (if
you have it), or ask over in r.r.a.equipment

assuming that this isn't a troll. But most trolls usually go for "know
code = no ham" or such....

I think that these licenses we have should be retested every so often, such as every ten years! All applicable elements for the respective licenses including the morse code test. Most every other license out there issued requires some form of retesting. At least this way we will find out if anyone has learned anything along the way or not... And it could be that if you were, for example a 20wpm Extra, you would have to pass all the elements required for that back then, or the license class you would have/get would be whatever elements a person DID pass on the retest. Definitely would show if anyone bothered to "grow" in the ten year period.

Jimmie Carter had, and still has, good intentions. But you know what's
paved with good intentions.
It's a shame, but they just won't hold off the evil that's always there.
For that it take teeth and the will to use them.

I notice a *lot* of spin from the ham radio press in the direction of
removing code testing that isn't supported in the documentation of WRC
and others.

Wonder what their agenda might be? (heh)

Of course, that's mainly because the code testing requirement has been there longer than most of us have been alive. With that in mind, obviously most today would be CW users as a the result of code testing.

> prime argument is just so much worthless rhetoric.

But, as you well know, the code testing requirement was originally established exactly because code was once relevant to the military, government, and commercial services outside Amateur Radio. Since that has now changed, it is clearly time to question the need for a unique testing requirement for this one operating mode. Since most ham operators today don't use code on a regular basis, there is also little need within Amateur Radio to maintain a testing requirement for this one operating mode. All that has led to the efforts now being made to eliminate the Morse Code test requirement.

> The Morse/CW mode remains as a valuable, basic
> communications tool within the ARS, and the code
> testing requirement is current and essential to the
> continued use of this mode. End of story. (snip)

But, as much as you'd like it to be, that is not the end of the story, Larry. Because so few use it, the mode now plays only a relatively minor role within the Amateur Radio Service. Therefore, code testing is not essential to the Amateur Radio Service. Further, without outside factors (the needs of the other services) to consider, the FCC itself has no significant interest today in maintaining the "continued use of this mode" within the Amateur Radio Service. As far as the FCC is concerned, it is now just one more operating mode among the many used within the Amateur Radio Service. There is no sufficient argument to support the continued existence of a code testing requirement. As such, the code testing requirement should be eliminated.

There's a difference between "need to know" and "should know".

>If you don't then your argument is just a means to divert
>the issue to arguing a different subject.

No, Bill, it's not a diversion. It's making a point.

Hams today don't *need* to know much theory in order to operate modern manufactured equipment. That's a plain, simple fact.

And most of what theory they do *need* to know is tested by the 35 question Tech test. FCC thinks that's adequate - in fact, back in 2000, FCC reduced the test requirements for Tech from 2 tests/65 questions.

I think hams *should* know more theory than just the bare minimum required to pass the Tech test, though. But that's just me.

I also think that hams *should* know Morse code - at least at a basic level. But that's just me.

The idea that hams should be tested on Morse code at even a basic level has been called "welfare for a mode", "forcing it down people's throats", various

nazi imagery, etc. So that must logically apply to requiring hams to test for more theory than they *need* to know.

Besides which, there is no requirement "that people who aren't required to be code tested usually don't bother to learn and use the Morse code." So, it is a non-issue when discussing the topic.

Clint is simply mistaken.

>Maybe time for N2EY to
>weigh in one this one

See above. Dee's information is correct.

FCC has *never* differentiated between code-tested and non-code-tested
Technician callsigns.

Also, with one exception, there has never been any requirement for a ham to
change callsigns when upgrading license class. That one exception, now long
gone, was the requirement to give up the Novice "N" or "V".

>..............oh..........wait a second........
>Jim must be a no-coder with that call sign. Jim, has Clint outed you? 8^)

Nothing to be "outed" from!

I have held this callsign since 1977, when it was sequentially issued. Before that I held WA3IYC, and before that, WN3IYC.

--

And while we're on the subject of callsigns...

I recall reading here recently that someone with a 2x3 WA8 call claimed to have held that same call since 1956. That's not correct, because FCC did not issue WA8 prefix calls that far back.

Perhaps I read that post wrong.

Thanks, Mike.

It is indeed unfortunate that this gentleman is in a situation where he needs to behave like this. However, he is a product of our great society - we place a very high value on education, training, and youth, and retire folks out of the mainstream when they get old. Men work hard all of their lives to become experts in their field, then retirement hits and - well, nothing. No job, no responsibility, and for many, no sense of value. Especially in the technical fields, where equipment and software becomes obsolete in under a year - it doesn't take long before one's knowledge is outdated, today. Browse through Fair Radio's catalog, and you will see a vast array of equipment that was once state-of-the-art. Years ago, thousands of men trained for countlesss thousands of hours on the maintenance and installation of this gear. Now, it's suitable only for anateurs, collectors, experimenters or parts. And, the men who maintained it are no longer required either - in effect, they have become surplus too.

On Retirement Day, and for the rest of our lives past that point, our realm of control is very small. Society has surplussed us, too - and we sit idle. With the knowledge that it will never be as it was again. And the future? Just the end of life's road, looming in the distance, ever closer. A lifetime of knowledge and abilities begins to decay with lack of use, as does mental capacity, reading comprehension, eyesight and even the ability to get up and move around freely. Frustration and despair begin to set in - after all, it's not going to get any better....there is no Fountain of Youth to wash away the years.

So, what is the man to do? Visit with relatives, hang out at the Legion, or the Y, or find a Senior's group, and wait - for the end. A lot of folks quietly do just that, and accept the reality of the autumn years. Some, like our friend, become bitter and annoyed, and believe that, since they have 'paid their dues' (military service, career, taxpayer, etc.), that the world 'owes' them something. You see this type of senior citizen at your local grocery store - impatient, butting in line, handling the vegetables then putting them back - you know. This sort of behaviour only alienates them further (would you want him over for dinner on Thanksgiving? - that would be fun! "Hey, @#$%^%+&, pass the #$%^^%$ potatoes, you #$%^&*$), and thereby decreases the number of friends in an already diminished pool. Death and illness take care of other old friends - and new ones sure aren't easy to make when you're bitter and angry.

Enter Walter Mitty - remember that story, about an average guy who found release in his daydreams of being a hero? Our friend has found that, through the medium of Usenet, he can become anything he wants - if he says he is, then he is. De facto. Here, he can regale us with tales of working on vast classified electronic communications networks, spaceflight systems, or anything else that he chooses - and who can dispute it? Maybe he did. Maybe he sat in the back of a Jeep operating a GRC-14 for four years at Pendleton, or sorted boots - here, in the wonderful world of Usenet, he could be the guy who showed John Glenn how to realign the radios on Friendship 7 with an old toothbrush and some tinfoil. Who can disagree? Who is this guy? Who knows?

Next, comes aggression. A big personality needs aggression - Natures' own defense against those who challenge authority, and risk exposure of the real person within - like the Wizard, in the Wizard of Oz (big aggression, great curtain - little guy!). In the military, boot camp DI's use this technique to the exclusion of all others, controlling by intimidation alone. It works - one can deal with logic and reason, but raw power and agression create fear - which cannot be dealt with using intelligence alone. This technique serves well here too, as an insulator against those who would probe and question. Here, the best defense is a good offense - vigourously and frequently applied.

There are two ways to argue a point - argue the subject, or attack the person that you are argiung with (the latter is called "ad hominem" - as old as time itself. Often used during political campaigns :)). Arguing the subject is easily done when sufficient knowledge is available to make points and counterpoints. It is best done calmly, civilly and in the true interest of learning the other guy's point (and maybe adopting it, or modifying your own stance a bit - after all, rarely is anyone 100% correct!). When you are being overwhelmed, however, and your self esteem is being threatened by a strong opponent with a solid arguement, you have three choices: agree, agree to disagree, or fight. Rational, educated people usually choose from the first two options. Fight is the mechanism that you see here - attack everything that you can about the person themselves, in the hope that they will back down and stop arguing altogether. Victory by acclamation - no more arguer, no more arguement. This takes a strong man to go in person, and one need only visit the local bar late on a Friday night to see it in action.

On Usenet, though, a small, old man can become larger than life by just pushing the keys on his keyboard, and letting his imagination go wild. Instant hero. Or expert. Or genius and inventor. One need only visit this newsgroup, as I did, to observe this phenomenon! And, if you check the group, you will see in his reply to my posting below that he is lashing out at what he thinks that he knows about me - 'manager', Northerner, youth ("old before my time") - like a punch-drunk boxer, swinging wildly at anything. "Raging Bull" - type stuff. But, he knows absolutely nothing about me, so all he can do is bellow and rage. Very frustrating, I'm sure....swinging wildly at

shadows....

So, what's the Defense? None required. Why argue with the guy?
Sure, he needs the confrontation to feed his ego, but that's not going
to happen at my expense. He can say anything he wants, but he cannot
get to me unless I let him. In this way, I remain in control.
Intelllect always triumphs over agression when physical violence is
removed from the equation. For example - a 130-pound Lieutenant
controlling a platoon of armed grunts - if they could attack him
physically whenever they diagreed with him, his authority over them
would be negated. But, that's not an option, (or a good one, anyway -
some heavy penalties to think about there....) so they do what they're
told, without question.

Feel sorry for our friend instead - but for the grace of God, that
could be you, or me, or someone we care about someday in the future!

73, Leo

HEY! I what made you think I was referring to code testing??? HMM?
not ONE word referring to morse code in there was included. Just
what in there made you think that I was talking about profeciency
testing of morse code? I could have SWORD I was referring to
the use of 8-track tapes.

Maybe because your mind saw the accurate analogy; the human brain
is well suited for just such a task, and you just ADMITTED a simularity
by merely bringing it up yourself.

By the way, all I did was substitute "8-track tape" for CW, basically..
so, explain to me, just HOW is it not an accurate analogy for
morse code testing?

Simply because you DON'T want it to be. That's all.

YOU had to buy, use and listen to 8-track tapes; therefore,
you think EVERYBODY should have to be trained in the use of
them and show profeciency and a working knowledge of 8-track
tapes.

The analogy was simply, easy, clear, precise... and the way in which
you QUICKLY picked up on what I was doing, obviously
successful.

>
> Amateur radio operators have always dealt with the level of technology
> available at their own particular slice in time.

until now... when a portion of them are bound and determined to freeze
it to 1952, or 1912, or whenever.

However, the one constant
> has been the Morse/CW mode,

(1) it's not a constant; the definition of a constant is something that
never changes with time. CW use has been declining, therefore,
it's not a constant. The velocity of the speed of light through a
vacuum is a constant. It is always a definable, tangable,
measurable value. The proliferation of morse code use is NOT.

(2) the only reason that morse code TESTING has lasted as long
as it has is due to it's forced impostion by dictation of the government
entity that oversees communication within the boundries of the
united states, supported by a shrinking portion of the ham radio
population that endeavors to perpetuate the testing of same.

which continues to be a practical,

so is shoeing a horse. Is the testing of one's skill at shoeing a horse
necessary to ride one, much less drive a car?

> effective, efficient, and universal mode of electronic communication
> in spite of any and all other modes which have been invented in it's
> wake.

and this is supportive evidence that code testing should be perpetuated...
WHY?

And, as always, radio amateurs are not able to exploit the
> many benefits and advantages of the Morse/CW mode unless they
> learn the Morse code.

I will not deny that... nor can anybody on this planet learn the benifits
and advantages of the use 8-track tapes unless they learn about it.
Now, why should there be a government mandate forcing a person
to learn how to use it? I'm sure there are some producers of
8-track tapes that, many years ago, would have LOVED to have
this happen. Hmm..... wonder what that sounds like........

Code testing requirements have always been
> the means of providing the incentive to do so;

self-fulfilling argument

in their absence, we will
> see a decline in the use of this mode in the fullness of time.

and if this is so, what business is it of yours, or ANYBODY's,
to DICTATE what people should and shouldn't do? If I play
the devil's advocate and agree with you, then just what

rationalization is there to "8-track tapes will disappear if we
do not force people to first undergo testing to USE them
before they are allowed to listen to prerecorded music!"?

This is
> just plain 'ole reality. No tricks of logic will change it, either.

Ah, you think logic is a trick. Well, therein lies your problem,
and I believe you share that with the rest of the PCTA
world.

EXPOSED!

Hey, that's just a trick of logic!
how DARE you bring up a fact!

> Yes. Takes little brains to learn morse, just a LOT of practice...to
> find that the rest of the radio world does NOT use it anymore.

yea, and he tried to claim morse code was a "constant". Heh.....

> You are trying to sell a product that isn't being bought.

That is the real core of the problem, RIGHT THERE..

"if morse code testing is not continued, it's use will
decline and eventually disappear"... WELL, then, it sounds
as they they are ADMITTING that they are trying to
force people to use something they may not otherwise
do.

They also come into conflict with the other half of the
morse code-o-philes that say "you don't HAVE to use it,
once you pass the test, that's up to you."

well, how do those two arguments logically coexist? they
can't....

(1) If we don't make test for it, then you won't learn
about it, then you won't ever use CW on the air.

and THEN....

(2) you don't have to use it on the air if you don't want
to. You just need to pass a test showing you can.

>
> You would do better selling snake oil or used cars.
>
> Come to think of it, you probably ARE...

that's exactly what they're doing. EXACTLY... except
one step worse; they are saying that if the government
doesn't force you to try snake oil, whether or not you
don't want to, then you won't ever learn about it and
thus snake oil use will disappear.

well, snake oil use HAS... and WHY? enough said.

The more the pro-coders argue, the more thier (non)logic
is exposed, the more then the amatuer society sees the
real truth and agenda behind it, and the more that will
steadily migrate to the modern era... they already are,
but the process will just be quickened. That's why I defy
any statement that accuses me of "not wanting the pro-coders
to speak thier mind".. on the CONTRARY, I want them
to talk and talk and talk and talk... I want them to keep
trying to reason why a person must be forced to consume
a non-competitive product.

It actually makes our job easier.

> Well then lets just do away with the written. Why should we force someone
to
> Memorize some Q&As that have no meaning.

Oh, it's TOO easy, but i'm going to do it anyway.

The written IS necessary so that people learn what IS necessary for
ham radio, particularly the rules. Streamline the written? yes... in fact,
there
really doesn't need to be anymore to testing knowledge than saftey and
regulations.... after that point, you're doing nothing than spinning off
into
some certain angle of specialization. The world of information is basically
without limits, therefore, it's not anymore logical to test for the
profeciency
of morse code than it is to test whether you know the exact lenght of what
a dipole is; the slippery slope then takes you to the unlimited number of
antennas that are possible in every possible exceptional situation where
changes would have to be made from operating that antenna from the norm...
and, to say the least, the test book would be 3 inches thick. THEN you
on elsewhere.

However, the written test as it is is VERY applicable to MODERN day
radio needs; the testing of a mode of communication that has been found,
in a free and open market that is influenced only by market forces, to be
getting phased out on nearly all levels of operation and possibilities of
application.

Well, if he did in fact cut and paste, or quote verbatim, then the following
statement ....

"as a qualifying criterion for an HF amateur license is no
>longer relevant to the healthy future of amateur Radio."

is, actually, JUST that.

I often wonder about the people that read documentation and
somehow use a twist of either comprehension or logic to overlook
what is being read.... just like the same people that read
UN resolution 678 and UN resolution 1441 and somehow
overlook that the united nations both KNEW saddam hussein
had WMD's in 1991 as well as 2001, and overlook that they
said any UN member nation may use "Any necessary means"
to enforce the two resolutions should saddam not comply with
them..... they actually read those documents and say "it
does not say that!"

but, the resolutions "did".
WORDS MEAN THINGS

quoting documentation and official paperwork/letters is fact, not spin.

what SPIN includes is reading that documentation that was quoted and saying
that the international organization does NOT support it's removal, when, um,
it *does*.

It way have been connected during the emergency, but there are some basic differences between the two. IRLP is REPEATER LINKING. This does not mean using your PC as a radio like Echolink. You are not allowed to connect to IRLP with a computer, you must use a radio.

I don't use echolink because I cannot be guaranteed a radio on the other end. I haven't used IRLP much because it's fake skip. I can talk real skip on my old 11 meter radio. It's not legal, but you can't stop mother nature.

P.S. I use all radios, Ham, MURS, FRS, CB, scanners, SWL, cellphone, etc. TV sucks. I don't watch it.

Hans,

I simply stated that I "love that paragraph ... etc." ... indicating
that I'm pleased with the IARU Administrative Council's
policy decision.

That is simply a fact (the expression that I'm glad the IARU is
becoming more progressive).

If you *choose* to interpret that as "rubbing peoples' noses in
it" I can't help that.

It's sad if he literally hates it. It's fun; it's interesting. I enjoy it. My many first QSL
cards were recieved from a CW contact.

However, I , with a capital I, like it, as in MYSELF... I chose to do it. I enjoy
it and excersize my right to do so. I do not see a well-founded need to FORCE people to learn it.

Perhaps, if carl really DOES hate it as you claim, he does so because of the multitudes of people forceing him to drink the coolaid that he does not want to.
The ONLY people that will really enjoy morsecode after having been MADE to learn it are the people that would have enjoyed it in the first place. I find
it very difficult to believe, and human psychology does not support such a claim,
that by MAKING somebody do something that they do not want to is
a very powerful motivator. I'm not quite sure you had a cheering, happy, jubilant, joyous and celebratory crowd of people dragging blocks of concrete around for hundreds of years to produce the pyramids; rather, i'm sure one million lashes of one million whips probably got it done.

Well, Dwight, you just showed the exctent of your knoweldge of the
subject. NONE!
Obviously you have no HF receiving capability and likely just as much
interest,
and just choose to adopt the standard NCI mantra. An even cursury tuning
across
the lower end of any low HF band any evening will show to be 180
degrees out
of phase with reality.

You do know about phase relationships don't you?

DON'T YOU??

Quite an opinion you have there, Dwight. Too bad it's not accurate nor
anywhere near universally shared among other hams, particularly among

hams who actually know something about Cw, and even it.

Even Bigger Newsflash: The FCC EXPECTS a certain degree of "self
training" from the Amateur Service, and hence it's requirement of
Amateur licenses which demonstrate increased knowledge with each
class.

It's right there in Part 97...read it for yourself, Mr.
Anderscum.

> >Electrical engineering is not ham radio.
>
> Not quite the right wording. Make it: Ham radio is NOT anywhere close
> to electrical engineering.

Even "more right" wording, Lennie: Make it: CERTAIN "electrical
engineers" are not able/capable/willing to pass even the most basic of
Amateur licenses despite the fact that even the most basic license
grants access to over 97% of all Amateur allocations.

> >Although they don't study code,
> >all of them have to take subjects in which they have no interest and will
> >never use otherwise they don't get the degree.
>
> Mommy DEErest, I was USING engineering knowledge at work well
> before I got my electronic engineering degree. It made classes (most
> at night) much easier.

An item that I am sure applies to Amateur Radio POLICY in SOME
regard...Lord knows that LENNIE would never violate his own newsgroup
rules-of-engagement.

> I did run into one instructor of the "Prussian General Officer" type
> who adamantly insisted, in a class on digital logic, that "there is NO
> such thing as an Exclusive-Or gate." I brought in a quad Ex-Or made

Nope...Not here either...

> I digress...(SNIP)

Of course you do. You have NOTHING of any PERTINENT value of
construct to offer, so we are treated to yet another LenniRiffic
dissertation on how LENNIE saved the radio world through superior
firepower...

>...(UNSNIP)since: 1. You refuse to acknowledge my postings because
> I have strong opposite views to yours; 2. You like to play some kind
> of Mommie DEErest and think that all newcomers to amateur radio are
> at the level of children.

Ummmmm...THAT would be YOU, Lennie...Of course you extend that
exact same kind of "treatment" to Amateurs who are not only tenured in
the Amateur Service, but who also share like skills, knowledge or
experiences as you...

But in your LenniRiffic mind, NO ONE can be even remotely as good
as you...It's unthinkable...(thankfully ONLY by you)

> >Adults are required to do things they don't want to on a regular basis.
>
> Yes, Mommie, but put aside the Mommie suit and THINK in reality.
> Laws and regulations are NOT required to remain long after their

> usefulness. That YOU personally like certain regulations is NO
> imperative that they should be kept, certainly not to any government
> agency making and enforcing those laws.

But YOU seem to think certain rules and regulations DON'T apply
to you, Lennie...why is that? Were you granted some sort of
dispensation by the Vatican to ignore them?

> Try to remember that US amateur radio is NOT an academic exercise
> nor is the FCC a college or university administering final exams.

You are the only one making even a suggestion that it is,
Lennie...

Why is it YOU make the assertion then spend days arguing about
it?

Mrs Lennie still not got that problem fixed? Can't stand to go
upstairs?

> Class dismissed.

Not by you, it isn't.

GEEEEEEEZUS, Lennie!

Pretty deep in the POT/KETTLE/BLACK mode today, aren't ya?

I've done some searches on "Leonard Anderson" and "Amateur Radio"
and with the exception of YOUR self-glorifying, self gratifying
pronouncements of moral superiority of all OF Amateur Radio, the
search comes up a BIG FAT ZERO.

Yes...we all know about the few articles you wrote in "Ham
Radio"...It still amounts to only a fraction of zero.

(BTW...Several of us were gathered at the "CQ" magazine booth at
the Huntsville, AL Hamfest last month, and your name was the subject
of great laughter and joking...So there lies YOUR contribution to
Amateur radio!)

> Any you've done what? Playing with your radios, doing your beeping thing
> the same as what was done by amateurs a half century ago or a full
> century ago? What kind of "new technology" is on-off keying code use?
> Who are you trying to fool other than children, fool?

This forum is about AMATEUR RADIO.

It is NOT about Army relay stations in the 1950's, PLMRS, the
IEEE or your SWLing of the aeronautical bands and an expired
student-pilot permit over four decades old...

Morse Code communications is a part of Amateur Radio. That is a fact.

And despite the amount of effort you put in to trying to make Larry look like that's ALL he does, you fail miserably.

YOU are STILL a liar.

YOU are STILL unlicensed.

YOU are STILL an outsider looking in. Please wipe the drool off of the window when you're done. It's embarrassing.

And..oh yeah...You're STILL a PUTZ.

Have a Nice Day.

You posted "Just shut up and march your way up into that cattlecar!"

Could be I was wrong. Perhaps after your references to a particular group of people who used to get rid of undesirables by marching them into cattle cars and then getting rid of them, you might understand why I thought you were making a continuing reference.

After all, people can make mistakes, Clint. Just like your "codeless callsigns, eh?

Steve,

I'm afraid that you may be treating our friend Len rather harshly. After all, he is both a septagenarian and an ex-military man, who served his country with great pride and dignity in the post-WW II era.

But now, he is getting on in years - and may be suffering from dementia, or Tourette's syndrome (the obscene outbursts are a definite indicator that this may be at play), or a whole host of other maladies which affect the aged, and may negatively impact his ability to relate to society. But, we do owe him a debt of gratitude for his service to his country, defending North America from the Communist menace back in the 1950's. He is probably quite frustrated that, although once a respected member of society, he has been cast aside like the comms equipment he once lovingly cared for. Surplus. Forgotten. Unwanted. $199.98 plus freight from Ohio. (as is - Used / Tested is extra).

We need to remember that Len may be someone's grandfather, or brother, or husband, or ice cream delivery man, and that although he is very much Semper Fi, life unfortunately is not. Perhaps that is why he lashes out. Tries so hard to associate with those he wishes he was - hams, electronics technicians - like that doofy kid from Peoria you knew back in grade school, who wanted so badly to play football with the kids in his new school, but was treated like an outcast by the kids, because he wasn't from your town. Perhaps he just wants to be a part of life again. Life is infinitely more complex than it was in Len's day - imagine trying to program a Samsung VCR with only R-808 third-tier maintenance training to fall back upon - My God. And yet, in some ways things have become simpler than could ever be imagined - who would have believed that a group of 1950's soldiers trained to operate a complex 1 KW microwave transmitter could be replaced with a single button marked "COOK"? That is disconcerting, I'm sure.

Ah...to be useful again. To be renewed! To escape from the "Island Of Lost Toys".

But he doesn't know how - the journey is arduous and difficult, and it has been so long...so very long...and lonely...

We should help him find his way! Extend the hand of friendship to our lost brother. Buy him a MFJ Morse Code Oscillator With Key for Christmas. Or something..... :)

To answer your question with a single word "No."

Licensing is required by international agreements and federal
law (and for good reason).

However, the requirements for licensure should be reasonable
and rational, and while the written tests meet that criteria, the
requirement for Morse proficiency no longer does.

Clint, Bruce said: "Well then lets just do away with the written. Why should we force someone to Memorize some Q&As that have no meaning."

Yet he claims that he was able to take the Extra exam on a lark, w/o ever studying for it, scoring 100%, in under 8 minutes.

But everyone else is forced to memorize the Q/A.

>Jim, your strawman is aflame, because I just pissed flaming napalm on it.

Hans,

It's not a strawman at all. It's a logical conclusion.

Can you show where my argument is logically invalid?

If someone really wanted to gut the written tests of most theory using arguments similar to those used against the code test, how would you defend the written tests?

W5YI and others have said that the entry-level *written* tests are too hard. So it's not something nobody but me is looking at.

You might want to take a look at what has happened to the number of new Technician licenses issued since the new Tech Q&A pool was put in place a while ago.

>Grow up.

Hans, I am saddened that you revert to personal attack and talking down to someone who presents an argument you dislike. At least you didn't send me to an Amish rake fight.

That was one reason, 90+ years ago.

Since then, other reasons have evolved.

>Since that has
>now changed, it is clearly time to question the need for a unique testing
>requirement for this one operating mode.

It's always appropriate to question *any* license test requirement.

>Since most ham operators today
>don't use code on a regular basis, there is also little need within Amateur
>Radio to maintain a testing requirement for this one operating mode.

First off, since Morse code tests are only required for HF/MF licenses, perhaps you might want to look at what ham operators do on HF/MF, not overall.

Also, consider how many of today's hams *regularly* build, repair or maintain their own equipment. Applying the argument you are using against the code test will gut most of the theory out of the written test, too.

> All
>that has led to the efforts now being made to eliminate the Morse Code test

"so few"? I think you underestimate the situation, Dwight.

>Therefore, code testing is not
>essential to the Amateur Radio Service.

That's a matter of opinion.

>Further, without outside factors
>(the needs of the other services) to consider, the FCC itself has no
>significant interest today in maintaining the "continued use of this mode"
>within the Amateur Radio Service. As far as the FCC is concerned, it is now
>just one more operating mode among the many used within the Amateur Radio
>Service.

Maybe - but again, that's your interpretation of what FCC thinks. And what FCC thinks and does isn't necessarily what's in the best interest of the ARS.

>There is no sufficient argument to support the continued existence
>of a code testing requirement. As such, the code testing requirement should
>be eliminated.
>
Well, I disagree on that, Dwight.

But ultimately it comes down to whose opinion carries the day with FCC.

Arnie,

If you review this individual's posts on this subject over the last
few days, a trend becomes obvious - his intent IS to upset and annoy.
He thrives on confrontation, and really gets going when he hits a
nerve with one of his readers. Not intellectual enough to make his
point by rational arguement, he resorts to name calling and other
juvenile tactics to 'get his way'. And he knows that the "nazi" thing
works - so he keeps on with it - it's his gig.

Convincing people like this to change is analogous to trying to teach
a pig to sing - no matter how hard you try, it ain't gonna happen -
you'll only annoy the pig....

Best tactic for handling this guy - Dee has it absolutely right, use
the killfile. If there's no audience, there'll be no idiot!

Plonk 'im.

Well, that may be what you're discussing, but I'm discussing Morse Code testing - a discussion which, by it's very nature, cannot be limited to just Amateur Radio. However, if the discussion were limited to just Amateur Radio, your arguments would have no more weight since most ham operators today don't use code/cw on any routine or regular basis. There is little reason to maintain testing for a mode that is seldom used by more than a relatively small minority.

Where did you get your information, Dwight? According to the ARRL (the primary ARS organization in the US) -- CW is the second most popular mode in the ARS -- Just behind SSB. That on its face would mean that there are still a whole bunch of folks out there still using it.

My first wife was Reform Jew. All her older relatives made it out of Germany via Denmark. I've talked with them at length at the time and also with many others in the same situation. In the Fairfax area of western Los Angeles. She died in late 1964, a cancer victim. Are you now going to "lecture" me on the Holocaust of WW2? Are you now going to assume some kind of superior moral attitude about "ancestry" because you have such weak arguments on the retention of morse code testing in an avocational hobby activity involving radio? May your conscience be forever burdened by the souls of seven million who died when you profess some kind of outrage in an argument over code testing. That is a pathetically weak, petty connection you make. There are several Centers for the Holocaust around the USA. I would suggest you visit one and spend some time there and reflect on the reality of that dreadful, terrible happening over half a century ago. Yarmulke is optional during a visit. Carrying a code key during such a visit isn't required.

P U T Z !

Based on the above, I would think that you would also be sensitive to the use of the word. Clint could have easily made his argument without invoking it. As to outrage, mine is real, my relatives who suffered and died were real, and I *do* take real offense to the use of the word in such a petty and out of context manner. You should too.

5034. Legal to Hack EchoLink ?

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-23 00:02:07 UTC

Message-ID: <34Mbb.7394$jO7.7140@newssvr31.news.prodigy.com>
Source record: 78392

Let's see... If I were to set up a bogus hotmail or AOL account, pick out a callsign from the callbook and then set up to access EchoLink on my computer and skip around the different systems, playing "Gangsta Rap" and golden XXX-rated oldies by the "Fugs", and FBI recordings of rabbits being slaughtered over distant EchoLink repeaters - just for fun - would I be breaking any laws?

Remember that I would be accessing over the Internet, using a call I picked from a list, maybe even an inactive one. No radio involved, at least none of mine.

Who would be responsible for the transmissions on those distant repeaters?

Just what law or regulation would make it illegal to access EchoLink with a bogus callsign? I don't think there is one.

Should I cross-post this question to the newsgroups frequented by CB'ers, Freebanders, FRS folk, etc? If not - Why not?

Charles Brabham, N5PVL

Faulty logic, Bill.

"Radio" is but a small, specialized part of electrical engineering. That's one reason Morse isn't and wasn't part of the curriculum. Heck, soldering is a much bigger part of electrical engineering than radio, and soldering is not taught in EE school either.

But if someone wants to learn radio on their own, and wants to learn-by-doing, amateur radio can be a really fun way to learn. Skill in Morse code is an excellent tool in that learning process.

Further-- The evidence is clear. Today's tests concentrate on
OPERATING and not on technical issues. SO--

In a ham radio where most all hams just plunk the plastic and buy a
factory-made radio to use, where no amount of written testing can
begin to "teach" them to adequately diagnose technical problems with
that gear, gear which is very reliable and essentially troublefree,
there is no rational need to insist they learn technical subjects.

When was the last time anyone was cited by FCC for unknown technical
problems with a modern rig? It just doesn't happen today despite a
plethora of newcomers who
can't identify nor explain the difference between a 1/4 wave dipole and
a 1/2 wave.

Far better to concentrate testing on operating - to include as many
modes as feasable. INCLUDING radiotelegraphy, **the second most used
mode in ham radio**.

But you already know all this. After all, your're a techie. You know what folly it is to expect newcomers to learn enough to understand a modern systhesized transciever, from a zero base of technical knowledge. For you to insist otherwise is shameful! You woiuld advocate "filtering" non-engineers from ham radio??

I know all that frosts your backside, but hey, that's what makes the world go round.

HICKORY, NC [UPDATE]: The FCC wrote General licensee John A. Abernethy, K4OKA, July 27, 1999, modifying his license to prohibit operation below 30 MHz for 180 days, effective immediately. Unless he appeals the action, Abernethy may not get back on HF until January 22, 2000. The FCC letter included a copy of a tape recording--supplied by complainants--of transmissions said to be of Abernethy's station on July 16. Hollingsworth's letter described the tape as "consisting of deliberate interference on 3.965 MHz." In the letter, FCC Attorney Riley Hollingsworth, K4ZDH, noted that Abernethy had been warned about deliberate interference at the time his station was inspected last January. Abernethy has 30 days to protest the sanction. FCC personnel inspected Abernethy's station January 21 and 22 in the wake of what Hollingsworth called "longstanding complaints from other amateurs and from our field offices." In particular, he said, the FCC had received "numerous complaints" about profanity, obscenity, deliberate interference, and failure to properly identify. Other complaints to the FCC alleged that Abernethy had aired something called the "Porkbutt Song," the letter said, "for the purpose of harassment or deliberate interference." Hollingsworth said the FCC's High Frequency Direction Finding Center in Maryland tracked the transmissions of the "Porkbutt Song" to K4OKA. The FCC letter also said the Commission had received complaints that Abernethy had used AM and upper sideband on 75 "for the purpose of interference" on or near 3894.5 kHz. Abernethy also was warned in the letter about over-power operation. Hollingsworth said that the FCC has no plans to start revocation proceedings against Abernethy "unless we have evidence of continued violations" of the type the FCC described in its July 27 letter. (For additional details, see "FCC Takes North Carolina Ham off HF for Six Months" elsewhere on the AWE news page.)

Well he says that he has visited and studied this and it doesn't change his point of view. So now that I've completed the discussion on the call signs, I'm going to put him in my killfile along with Len 0ver 21.

I really hate to see you do that. I killfiled Len for about a year, and in the process, missed many a good laughs. But, as I said in another reply -- just might have to be done.

This is a little out of date, but should give a little background info for those who are unfamiliar with "BIG AL"...

HICKORY, NC [UPDATE]: The FCC wrote General licensee John A. Abernethy, K4OKA, July 27, 1999, modifying his license to prohibit operation below 30 MHz for 180 days, effective immediately. Unless he appeals the action, Abernethy may not get back on HF until January 22, 2000. The FCC letter included a copy of a tape recording--supplied by complainants--of transmissions said to be of Abernethy's station on July 16. Hollingsworth's letter described the tape as "consisting of deliberate interference on 3.965 MHz." In the letter, FCC Attorney Riley Hollingsworth, K4ZDH, noted that Abernethy had been warned about deliberate interference at the time his station was inspected last January. Abernethy has 30 days to protest the sanction. FCC personnel inspected Abernethy's station January 21 and 22 in the wake of what Hollingsworth called "longstanding complaints from other amateurs and from our field offices." In particular, he said, the FCC had received "numerous complaints" about profanity, obscenity, deliberate interference, and failure to properly identify. Other complaints to the FCC alleged that Abernethy had aired something called the "Porkbutt Song," the letter said, "for the purpose of harassment or deliberate interference." Hollingsworth said the FCC's High Frequency Direction Finding Center in Maryland tracked the transmissions of the "Porkbutt Song" to K4OKA. The FCC letter also said the Commission had received complaints that Abernethy had used AM and upper sideband on 75 "for the purpose of interference" on or near 3894.5 kHz. Abernethy also was warned in the letter about over-power operation. Hollingsworth said that the FCC has no plans to start revocation proceedings against Abernethy "unless we have evidence of continued violations" of the type the FCC described in its July 27 letter. (For additional details, see "FCC Takes North Carolina Ham off HF for Six Months" elsewhere on the AWE news page.)

well, I have an HF rig, many of my local ham friends have them. We do in fact hear CW signals on the lower parts of the HF bands; I sometimes participate and make contacts, recieving and transmitting CW.

It's a relative comparison here that matters; and it is as follows. A growing
percentage of the HF spectrum is being used by VOICED contacts,
and a shrinking percentage is being used for CW. That is one of the primary reasons that the band allocations were changed recently and some of the lower CW/data subbands were shrunk and the balance given to the upper portions being used by voice contacts.

>
> You do know about phase relationships don't you?
>

Exactly.

> Quite an opinion you have there, Dwight. Too bad it's not accurate nor
> anywhere near universally shared among other hams,

Yes. I'm afraid it is.
That's why there is a growing voice and ever strengthening push, year after year, to eliminate the CW testing requirement.

You do listen to the knews, DON'T YOU?

And that's only *half* the truth. The *REST* of the story is that this is
not
a static relationship; the use of SSB is growing while that of CW is
declining,
as each year the number of prominently morse code users either change
over, quit operating ham radio or go silent key.

> to express your argument than by invoking an analogy that offends a large
> group of people.

Here's the scenario, should you decide to halt all communication that offends
some people.

The whole world goes silent from lack of all human communication. WHY?

All advertisements must be taken out of public view, as smoking cigarettes angers the anti-smoking crowd, meat products anger p.e.t.a.-types, wood products anger earth first! types, etc;

All books must be taken off the shelves, even the oldest literature offends some moralists... religious books offend athiests and pagans. Secular books offend christians, etc.

All music must be taken off the airwaves and recorded music products must be taken off the shelf... as rap offends those who've been victimized by violent crime, religious music offends seculars, pagans and athiests, etc.

Alcohol must be taken off the market to avoid offended MADD.

I could continue this ad nauseum but I think the point is pretty clear. If YOU want to live in that world, go right ahead and censure everything you say and carefully make sure you are not going to first offend everybody. The utopian socialists will LOVE you for it. I, however, will not. Ever. Are we clear?

> If you review this individual's posts on this subject over the last
> few days, a trend becomes obvious - his intent IS to upset and annoy.

Nope.

My intent is to offer a balancing opinion (I am intitled to that..???)
My intent is to offer a bit of modern thinking to oppose the
old gaurd "will not change to the end" crowd. My intent is to
offer proof and evidence to counter emotional bleeding
heart tactics.

If you are upset and annoyed, instead of genuinely inspired to think
further about the issue, then perhaps you should take a good long
look under your bed and make sure that you are operating from
anything less than true, honest feelings and ideas, and not
"I HAD TO DO IT, AND SO SHOULD YOU!!!!" mentality.

> He thrives on confrontation,

no, I will just not back down when ganged up on by "you do
as your told and quit questioning your betters & elders!" tactics.

Not intellectual enough to make his
> point by rational arguement,

i've done so and supported proof, and got EMOTION and
"feeling" in return instead of logical arguments. The few times
a PCTA type attempted to use a counter argument, it was so
weak and thin I blew holes in it quickly. Of course, soon
the real direct personal character attacks came.... "lazy",
"stupid", "moronic", etc...

now, WHO has the lack of intellect to make a point with a
rational argument?

>he resorts to name calling

if THAT isn't the pot calling the kettle black!

And he knows that the "nazi" thing
> works - so he keeps on with it - it's his gig.

you are correct. It made an excellent analogy that
struck home and made a concept clear. It's called
using examples to support an idea.

try it instead of just dodging the issue or telling
NCTA people to "shut up and do what you're told,

you're lazy, just do it, it's simple, do what we tell
you because only WE know what's best for you!"

You're turn-around tactic won't work on the
rational among us. The ONLY people it will
strike home with and find comfort with is the
small portion of the ham society that makes up
the PCTA crowd, and those people i'm not really
interested in reaching because they are so die-hard
CW testing lovers that they are not reachable.
The ones I am reaching are the other undecideds
out there and the ones that know they do not
have enough information to make thier own
decision and thus look further.

And you guys have done a really good job
of showing that the ONLY one common
basis for keeping the CW test alive is
that YOU had to do it, and it's just plain
not fair if future generations do not have to.

I don't think you won them over, but keep talking;
you're helping MY cause.

thanks!

Heh, you think you've won the race the fact of the matter is you went
to the WRONG race track.

I'm not really looking to you guys as an audience; I am, in fact,
speaking to those out there reading and not posting. Of which there
are more than you can possibly imagine; there are certainly more of
them than the PCTA crowd.

THEY will read my posts. And THEY just saw that YOU cannot
handle debate, you run and hide.

yep, you just hurt your cause a little more.

Leo, an obvious PCTA, said this in a previous thread.. and I quote..

"Not intellectual enough to make his
point by rational arguement, he resorts to name calling and other
juvenile tactics to 'get his way'. "

oops.

A PCTA just did that, not a NCTA type.

Add "hypocrisy" to the list of the PCTA flaws in tactics and
debate skills.

Oh, please.... An excellent analogy? No one could possibly believe
that. Not even someone at your level of social comprehension.

You're making this stuff up, right? Pots and kettles? You 'blew holes'
in someone's arguement? It's OK to intentionally use a hateful
'analogy' to prove a point, then are surprised that you got emotion in
return? (well, Duh!)

There's a career waiting for you at the local Comedy Store, my friend!
Jeez....

...ROTFL again!

Leo

PS - I'm helping your cause? I thought that your cause was the
elimination of Morse testing. If you review all of my comments so
far, you'll find that I have never once mentioned Morse testing, pro
or con. You have no idea what my position is on that subject - nice
reading comprehension, my friend.

Unless your cause is to get up on the soapbox and make a fool of
yourself - if that's it, just let me know if you need any more help!

How so? I have never stated my position one way or the other with respect to mandatory Morse testing. I have stated that I did get my 5 WPM to get on to HF because I had to by law, and that using it for QSOs is beginning to grow on me. That doesn't mean that I think everyone should have to do it!

So, does that make me pro or con, for mandatory testing? Where's the obvious? Hmmm - there's that old reading comprehension problem again....

I think that you just like to stir things up, Sir - your diatribes appear to serve no other useful purpose. Of course you are aware that the future of Morse testing will be decided at the government level, by committees of civilized people - and not within this group. As such, your energies and passionate rants are for nought, as they will not sway the decision makers one bit. Like complaining with the guys on the loading dock about the boss - won't change anything, but I bet that would make someone one feel more important and in control, huh? (know the feeling?)

Only you and a few like you washed out. Russian military, as our own,
don't.
When one is sitting trying to learn code, realizing that if you "just
can't" then
it.s off to the infantry, the failure rate is unsurprisingly low to
nonexistant.

To clarify, the dispute is about how much of a role code/CW plays within the Amateur Radio Service today and whether the FCC has an incentive to maintain testing for this mode. To decide that, we first have to look at the number of people using code and what it is used for. As for the numbers, even excluding the "no-code" Techs, I think most would agree that the majority mainly use the voice modes and only rarely use code. Add in the "no-code" Techs and it is fairly clear that most Ham operators don't use code.

The next question is what code is used for. Clearly, code only plays a very small role in emergency communications today (a key component of Amateur Radio). Likewise, code is seldom used by the agencies we serve (Red Cross, Civil Service, and so on). In each of these (agencies served and emergency communications), voice is the dominate mode. That leaves only recreation as the primary use of CW/code.

With these facts, we can now go back to my primary point - does the FCC have any incentive to maintain testing for a mode that is mainly used for recreation and not used by the majority of todays' ham operators? I think the answer to that is fairly obvious.

> Also, consider how many of today's hams *regularly*
> build, repair or maintain their own equipment. Applying
> the argument you are using against the code test will
> gut most of the theory out of the written test, too.

Obviously, the FCC does not require demonstrated ability to build or repair equipment. Instead, they test basic theory in the written exams, just as they test basic code/CW theory in those same written exams. However, there is a difference between testing basic theory and testing actual skill. Since code will continue to be an available mode, there is justification to maintain testing for basic theory just like the other modes. But I find no sufficient justification today for the continued skill testing of this one mode.

> Maybe - but again, that's your interpretation of what FCC
> thinks. And what FCC thinks and does isn't necessarily
> what's in the best interest of the ARS.

Actually, for the reasons already stated, I think they are concerned with what is in the best interest of the ARS. The Amateur Radio Service is not (or should not be) defined solely by CW/code, so that one mode does not solely define what is in the best interest of the ARS. However, as it is, testing of that one mode does continue to define the ARS. I personally think it is time for that to change.

Carl:

Jim, N2EY, just said, in so many words, that since today's amateur
radio equipment can no longer be designed, built, or serviced by
any but the tiny handful of hams who possess professional-grade
technical knowledge, skill, and facilities, that most of the technical
knowledge in the present written tests can also be eliminated as
a licensing requirement. I totally agree. In what way is it
"reasonable and rational" for someone to know Ohm's Law or
even the most basic digital theory, if they'll never have to use it
in their actual practice as a radio amateur? I say it isn't, and
nothing could prove this better than eliminating the code testing
requirements for the same reason. After all, code testing has
the effect of exposing prospective radio amateurs to what is
always going to be a practical and useful communications tool
which allows radio amateurs to practice basic radio
communication with only entry-level skill and technology.

If we eliminate the code testing requirement, we therefore
demonstrate that basic communications skills are no longer
necessary to be a licensed amateur radio operator. I, for one,
would like to think that the present syllabus of the written tests
still represents "basic communications skills." So, which will
it be? Code testing, written testing, both, or neither?

Keith:

I bought the DVD. Actually, it was a Winchester .270 cal. bolt-action
rifle.

>In the documentary he discusses
>the fact that the tenage mass killers bought their ammo at Kmart
>and obtained guns at gun shows.

Both perfectly legal activities, assuming they were old enough to
legally do so, but I think Harris and Klebold had assistance from an
older woman. What was illegal and immoral, however, is the manner
in which that ammunition was used. How is K-Mart at fault for the
misuse of a perfectly legal product which is otherwise safe (except to
violent criminals) when utilized in it's intended manner, using the
well-known safety practices associated with it's proper use? The
fact that K-Mart was willing to acquiesce to the extortionist pressure
placed upon them by Mr. Moore only serves to make one understand
why their organization is going down the tubes. They were engaged
in perfectly moral and legitimate commerce in the sale of firearms and
ammunition, but chose instead, to allow themselves to be used as
a scapegoat for the villainous actions of those who misused these
products. I have personally purchased firearms and ammunition
from K-Mart, and it has never occurred to me to shoot up a high
school with them. Is K-Mart just lucky that I'm not a violent criminal,
or was there something different about the Marlin Model 60 and
336 rifles and the .22 LR, .30-30 Winchester, and other ammo I
bought from them that caused it not to be used to kill innocent
people?

> The thought occurred to me, Why in the hell can a teenager in America buy a
>weapon of mass destruction with no test or license, but to pick up a
>microphone to talk he needs to obtain a license from the federal government?

The truth is, he doesn't. Bootlegging is a big problem in radio. However,
like criminals who commit violent crimes with sporting firearms, it is not
the inanimate objects (firearms or radios) at fault - but the responsible
human agent who utilizes them in an improper manner. No amount of

licensing can prevent the misuse of guns, cars, radios, aircraft, or any other potentially destructive item -- and the world is full of them. It is up to us intelligent human beings to use these things in a proper, moral manner. We can either decide to accept this challenge and take the responsibility for our actions, or simply sanitize our lives of anything that could possibly hurt us. The choice is ours. If you choose the latter, you can start by throwing away every bar of soap in your house. After all, if misused, a bar of Kirk's Coco Hardwater Castile can be just as dangerous as a .22 cal. rifle.

>I
>can understand for a vehicle, but isn't it time to do away with Ham Radio
>licensing in a nation in which 12,000 people are murdered by untested and
>unlicensed gun owners? Just a thought.

What of the over 2 million people who are saved from violence each year by the legitimate use of firearms? Or the untold thousands who benefit from the emergency communications services provided by legal, licensed radio amateurs? In the case of guns, the liberal media, which has an agenda to remove the personal power given to the people to defend themselves from violence, never allows the truth to see the light of day. However, the benefits of amateur radio are well-known and occasionally given publicity which does it some good. The problem of the over 12,000 victims of violent gun crime can be readily addressed by simply enforcing existing laws, and treating criminals AS criminals and not using the inanimate object (the gun) as the scapegoat for human behaviour. In the true manner of a person with a liberal, socialist, freedom-hating agenda, Mr. Moore carefully left that truth out of his documentary. It is up to us to be intelligent enough to see through his lies of omission, and learn the truth. The same applies to code testing, or any other licensing requirements in the ARS.

Kim:

Well, that's pretty sad. I guess you're overlooking the fact that a person's online "personality" can be quite different than what one would experience in person, since the written word, particularly in a virtually immediate forum such as Usenet, is, indeed, quite impersonal by nature. Moreover, your expression of a lack of desire to meet with certain members of this forum could cause all the rest, even those not included on your list, to not wish to meet with you.

I would jump at any chance to meet any and all of the regulars in this newsgroup, for no better reason than to see what they are really like in person. I think that even Len Anderson could prove to be a quite affable chap, given a chance to get to know him better. I may be wrong, but at least I'm willing to take that chance. I would like to think that given the opportunity, your curiosity would ultimately get the upper hand over your stated objections. If not, one could quite legitimately call your character into question, at a level far deeper than anything ever said in this forum.

>at the FCC, either for the commissioners who regulate Amateur Radio or the
>technical experts they rely on.

Oh? So Element 1(a) has been eliminated?

>> (snip) However, this discussion is about the AMATEUR
>> Radio Service. (snip)

> No, this discussion is about the code test requirement. How that applies
>to Amateur Radio is only one part of that discussion.

No, it is the whole discussion, since there are no code testing requirements
anywhere else. You are now becoming dangerously Kim-like, Dwight.
You really should watch out for that.

Dwight:

I hate to sound like a scratched CD, but that reply is unresponsive. If the above were true, then the very second radio amateurs started using modes other than CW, the code testing requirement should have been dropped, for all the same reasons given by the NCTA today. However, it wasn't. In fact, in the late '60's, over a half-century after the need for military and commercial stations to be able to shoo-off "those damn hams" from their frequencies, the Morse code testing requirement was increased as part of the now lamented "Incentive Licensing" scheme. Incentive Licensing was an ARRL initiative, and it was done to ensure that the Morse/CW mode would continue to be used in spite of the increasing popularity of SSB and digital modes. It was actually a very brilliant plan, but was spoiled by the resentment caused by the lack of full "grandfathering" of the existing Generals to the new Amateur Extra class. If only that had been done, we may not be having this debate today.

>Since most ham operators today
>don't use code on a regular basis, there is also little need within Amateur
>Radio to maintain a testing requirement for this one operating mode.

During the last ARRL 10-Meter Contest, I worked over 160 QSO's on 10-meters, using only CW. This is on 10-meters, a band famous as a

repository for the 5 WPM Novice/Techs exercising the whole of their HF phone privileges! During contests covering all HF bands, such as the November Sweepstakes (CW), it is not possible to work all of the CW stations participating. Well, at least not for me, with my minimal station in a highly antenna-compromised apartment QTH. However, in spite of my operating challenges, the CW mode provides endless potential to make points. During the November SS (Phone) last year, my club station (W3DOV) was also operating under "marginal" conditions at the QTH of Mark, KE3UY. Using literally the same power and antennas as I would at my home QTH, we worked a lot fewer stations than we could have on CW. It's as simple as that. And, excluding contests, the CW segments are very alive and full of stations all the time, largely thanks to FISTS and the old CW-geezers chasing all that paper.

>All
>that has led to the efforts now being made to eliminate the Morse Code test
>requirement.

The efforts being made to eliminate the Morse code test requirement are motivated by one thing and one thing only: laziness. The laziness born of a lack of desire to learn and gain reasonable proficiency in a proven, useful communications skill. And, considering the nature of the ARS, indulging that laziness would be an abomination.

>> The Morse/CW mode remains as a valuable, basic
>> communications tool within the ARS, and the code
>> testing requirement is current and essential to the
>> continued use of this mode. End of story. (snip)

> But, as much as you'd like it to be, that is not the end of the story,
>Larry. Because so few use it, the mode now plays only a relatively minor
>role within the Amateur Radio Service.

That has been disproved over and over again…most recently, in my last paragraph, above.

>Therefore, code testing is not
>essential to the Amateur Radio Service.

It most certainly is, if the ARS wishes to continue to develop radio operators capable of exploiting the many benefits and advantages of the Morse/CW mode.

>Further, without outside factors
>(the needs of the other services) to consider, the FCC itself has no
>significant interest today in maintaining the "continued use of this mode"
>within the Amateur Radio Service.

The FCC has stated repeatedly that whether or not it will have an interesting in the "continued use of this mode" depends upon a consensus of the amateur radio community itself. Therefore, unfortunately, we will be at the mercy of the majority. Us PCTA's

may not like the outcome, but that is the risk one takes when living
in a democracy.

>As far as the FCC is concerned, it is now
>just one more operating mode among the many used within the Amateur Radio
>Service. There is no sufficient argument to support the continued existence
>of a code testing requirement. As such, the code testing requirement should
>be eliminated.

As already stated by N2EY, this particular logic could then be applied to
testing for knowledge of any of the requirements for technical knowledge,
since radio amateurs no longer have the ability to design, build, and repair
state-of-the art communications gear unless they possess professional-
grade technical knowledge, skills, and facilities. And, since this is the
AMATEUR Radio Service, that is an unreasonable expectation. Therefore,
if code testing *is* eliminated, then we may as well also go to a simple
license application process, with, at most, an open-book test on rules and
regulations. That would then serve the needs of the dumbed-down
licensing process you would seem to prefer.

I don't doubt CW is popular, Arnie. It's all relative. The question is whether it is popular enough to justify a unique testing requirement for this one mode. By the way, I think you meant to say just behind voice above (AM, FM, and SSB).

>feeling about the above).

If someone has their mind made up that they do not like something,
shoving it down their throat with a licensing requirement isn't going
to change their mind. All it's going to do is create resentment. I'm
inclined to think that many, perhaps even most, of the people who had
to learn Morse simply to upgrade so that they could get the privileges
on HF to do what they were really interested in, are so glad it's over
with Morse now that they've passed the test and never have to do it
again, the chances of them going back to it later are slim.

I could draw numerous analogies, but the fact remains that, absent a
license requirement WRT the code, once an individual has obtained gthe
license without having been forced to learn code, the code can then be
viewed as another mode for possible exploration later, rather than as
the barrier to obtaining the license that, once surmounted, is often
considered best forgotten about.

With many PCTAs none of this matters, for their aim is to force people
to jump through hoops, rather than to encourage any interest in the
hobby or the mode. All our bands can get reallocated because of lack
of use, like happened to part of 220 years ago, and they don't care,

as long as the fifteen people who will be left on the measly 2khz the ARS will have left afterward all passed a code test. There are even people who maintain that the best way to get young people interested in ham radio is to show them hams operating in CW. "Look at a bunch of kids at a ham demo and see what they gravitate to," they'll say. "See the looks on their faces."

I have. I've also seen the same looks on their faces when they see the clown at a circus, or the geek at a carnival sideshow. Kids will hang around for awhile, laughing inwardly at the old geezers acting like it's still 1902, then they're outta there, c-ya, wouldn't wanna b-ya. They're not standing there thinking this is cool, they're standing there wondering what's wrong with us messing around doing things the way they were done 100 years ago when there are twenty easier ways to do the same thing today. Anachronisms may arouse curiosity. Curiosity does not necessarily equate to a genuine interest. I might be curious about skydiving - that doesn't mean I want to risk the 5000-foot fall plus the splat just because I see other people jumping out of a perfectly good airplane...especially when I know that it's easier and safer to wait until it lands and then walk down the stairs.

So, I agree with you that we may well be better off, from the standpoint of preserving the use of the mode within the hobby, to remove the testing requirement and allow the mode to stand on its own merits. If someone asks, "Why should I learn Morse code?" the answer right now is basically, "You have to in order to get the license." And the reaction is basically, "Screw that, I'll just find another hobby."

Lose that, and we have "Because sometimes a CW signal will get through when a voice signal won't, and because Morse contacts in a contest are worth more points, and because some operators enjoy it so much that they use it exclusively and so if you want to work those guys you have to learn the code in order to 'talk to' them." And maybe, just maybe, the reaction just might be more favorable to the future of the ARS.

>best years of my ham radio career, I was one of the "objectors."

In my opinion, Larry, you aren't accounting for the fact that the
personality traits of various people differ widely. You yourself chose
to dump your objections. I chose to find another hobby instead, and so
for almost 30 years remained a radio hobbyist active in other
interests but was not part of amateur radio - I thoroughly enjoyed
SWL'ing, scanning, AM broadcast DX'ing, and didn't feel as if I was
missing out on anything by not having a ham ticket.

I also immersed myself in computers as a hobby. That led me eventually
to the Internet which, strangely enough, is what led me back to ham
radio. Vicious circle, that...but fodder for a discussion on an
entirely different topic.

What I'm trying to say here is, for every person who, like you,
decided to compromise your objections, there are who knows how many
others who felt that as a matter of principle they were not about to
waste their precious time learning what they felt was an anachronism,
and moved on to something else instead...a process which continues
today. Each such person represents a potential ham chased away from
the hobby by a wholly unnecessary licensing requirement. This is why
many view it as a hazing ritual. How many licensed drivers would be on
the road today if you had to buy a horse, learn to ride it, and be
tested on your equestrian skills in order to get behind the wheel of
the family bus? Probably very few, and in many cases the reasoning is
probably the same in both cases - i.e., they don't want to deal with a
lot of horseshit.

>So, as
>you say, we can't prove anything now, but I'm not willing to bet that there
>will be some sort of "epiphany" among former no-coders to go ahead
>and learn the code and become CW operators when the testing
>requirement is gone. It just ain't gonna happen!

Probably not, because they already have had the experience of having been forced to learn the code in order to pass the test, and having done so, are glad it's over with and don't care if they ever use it again. They've passed the only code test they'll ever have to take as long as they keep their licenses current, and are glad to have the whole ordeal over with, permanently.

Again, no way to prove anything now one way or the other...but we'll find out if and when the code test vanishes, and we see how many people licensed without a code test learn the code voluntarily on account of its merits as an operating mode, absent any lingering resentment over the licensing requirement or the prospect of prolonged beatings with the Wouff Hong hanging over their heads like the Sword Of Damocles when they begin their participation in the hobby.

Sure it is. Part of the basis and purpose of the ARS as specified in
Part 97 is to develop a pool of trained radio operators. Since nobody
else uses CW anymore, it is no longer necessary to develop pools of
Morse-trained radio operators.

>The Morse/CW mode remains as a valuable, basic communications
>tool within the ARS, and the code testing requirement is current and
>essential to the continued use of this mode. End of story.

Hmmm...

Valuable? In some respects, perhaps. It does have its advantages,
although it also has its disadvantages.

Basic? I'm not too sure of that. It was once upon a time. I'm inclined
to think that time is either passed, or very close to it. I don't know
what percentage of hams is sufficiently skilled with the mode to
actually use it for on-air contacts, but surely the percentage must be
shrinking daily.

As for the code testing requirement being essential to the continued
use of the mode - if that's the case, then the patient is already
brain dead and being kept alive through purely artificial means, and
will expire anyway as soon as somebody pulls the plug, either
accidentally or deliberately. The question then becomes, for how long
do we prolong the inevitable, and for what purpose?

I went back and read it, Dwight. As I've said before, please don't include me in that ficticious demographic. I'm a newbie, I'm relatively young, and I con't agree that "agree that the majority mainly use the voice modes and only rarely use code." How do I know, Dwight? QSL cards from CW QSO's...with newer callsigns. I think you've just proved Larry's point re. actual experience, Dwight. Try listening in the 40m Novice/Tech"+" sub-bands. Although, with the code requirement at only 5-wpm for General and Extra, you're just as likely to hear those newer calls on the bottom of the bands as well. Haven't run into a grouchy/grumpy fist yet.

Yeah he has "staff" but they're as clueless as he is. His staffer
D'Wanna or whatever her name is, the political tootsie who runs the
FCC outfit which sits on ham radio got up at a seminar and expressed
amazement at how people on the ground can talk to people in airplanes
in the sky with radios.

>a licensing requirement.

Well, not exactly.

What I was trying to say was that, given the characteristics of modern ham equipment and its popularity with hams, that there was not the same *need* for hams to be as knowledgeable in radio *theory* as there was years ago.

I think hams *should* be knowledgeable in theory today - just as I think they *should* strive for operating skills. Including Morse code skills.

But there's a big difference betwen *should know* and *need to know*.

>I totally agree. In what way is it
>"reasonable and rational" for someone to know Ohm's Law or
>even the most basic digital theory, if they'll never have to use it
>in their actual practice as a radio amateur?

Particularly when it is "shoved down their throats"?

>I say it isn't, and

Ah, but you forget an important step in the analysis!

One picture is worth a thousand words. Therefore, the time required to send a "Morse picture" at 20 wpm is equal to 1,000/20 = 50 minutes with no compression.

Poor DICK. I'm sure the failure rate was quite high. Why the big
rush to RTTY and other modes which don't require the operator to be a
human modem?

Perhaps Len could shed some light on this.

I agree,
How about it Carl, let's do away with the outdated theory crap that's
keeping a lot of engineers and kids out of out hobby. Why I know a Doctor
who would love to be a Ham, but because of the stupid, outdated theory he
can not get his license.
Who would you rather have as a Ham, a Doctor who might save your life, or

another know-it-all who knows out dated electronics theory.

Will you lead Ham Radio out of the darkness and into the light Captain Carl? Break these shackles that bind us to the old ways! FREE RADIO FOR THE MASSES!

10-73's!

(Of course I'm kidding, but this will be coming real soon AND YOU KNOW THIS!)

Outgoing mail is certified Virus Free.
Checked by AVG anti-virus system (http://www.grisoft.com).

And, I would be upset....because? I don't get on a forum in a newsgroup
with the intention of meeting and greeting. Your excuses for your behavior
that this is "just a newsgroup" are weak and shrill at best. I think those
of us who probably would meet in real life are those who have been frank and
honest about who we are, up front and without using the guise of a newsgroup
to act in a manner inconsistent with who we are as people. THOSE are the
people who would end up meeting and not having to waste time muddling

through who we are and who we ain't, Larry.

I am not in least bit curious about the majority of people in this
newsgroup. Most of all, those mentioned above.

"Big Al" is actually K40KA. Read the article I posted to "BIG AL AND FRANKY"
and that should pretty much sum it up.

With all due respect to Jim, just because he said it doesn't make
it true. (no matter how many words he used :-)

> that since today's amateur
> radio equipment can no longer be designed, built, or serviced by
> any but the tiny handful of hams who possess professional-grade
> technical knowledge, skill, and facilities,

That's absurd ... just as those who want to (and don't have a
legitimate physical limitation that prevents it) *could* learn
Morse at some arbitrary speed, anyone who wants to (except,
someone who's truly mentally deficient) can learn the skills
necessary to design, build, and service equipment comparable
in performance to (or better than) off the shelf commercial equipment.

Even "custom ASICs" can be affordably created in the ham's
home workshop with free or inexpensive software tools that
run on any reasonable PC, using FPGAs and other programable
logic devices ... and they can do significant signal processing at
rates higher than can be done in software on a PC (though using
the PC to do some signal processing is useful and practical in
some applications).

Some of the fancy LCD displays require special manufacturing
techniques and equipment and would be prohibitively expensive for
"one off" and small quantities, but they can be replaced by a "soft"
display on a computer screen if those sorts of bells and whistles
are desired ... check out "Ham Radio Deluxe" ... one hell of a
slick control program, that's free by the way, from Simon Brown,
HB9DRV, and Peter Halpin, PE1MHO, (NCI Director Emeritus,
holder of the 1st 6m QRP (<=5W) DXCC, and other awards and

omgosh ... a no-coder)
at: http://www.kns.ch/sysgem/hb9drv/HamRadioDeluxe.htm

Building and servicing are simply a matter of technique. SMT
parts can be soldered by hand with a small, low wattage iron
(even 200 pin QFPs ... I've done it many times) or with a simple
hot air reflow soldering system (you can buy one, or could build
one ... I've reflowed modest sized PCBs with a heat gun and
some care.

The techniques are different than the old "thru-hole" methods,
but they are really no more difficult and are certainly within
reach of anyone who cares to learn.

(and, amateur radio is *supposed* to encourage the learning
of useful technical skills, advancing the art, etc.)

> that most of the technical
> knowledge in the present written tests can also be eliminated as
> a licensing requirement. I totally agree.

So, you would prefer that the amateur ranks be centered on
appliance operators (as long as they can beep fast)??? That's
the death warrant for amateur radio if it ever becomes totally
that way.

Reducing the technical skill of amateurs to your level and
keeping "Morse as king" may make you FEEL superior,
Larry, but it's really the TRUE "dumbing down" of the
amateur radio service ...

Other than as a recreational activity in the ARS (which is fine),
the world has passed Morse by.

What's needed in the "pool of trained operators" is no longer
a cadre of Morseists, but folks who have the technical
knowledge and skill to build, field, and maintain systems that
can meet the communications needs of EMS agencies ... and
that's at a level of technology far beyond OOK Morse.

> In what way is it
> "reasonable and rational" for someone to know Ohm's Law or
> even the most basic digital theory, if they'll never have to use it
> in their actual practice as a radio amateur?

Ohm's Law is a tool that can be used for many things ... biasing
circuits, figuring out what size wire gauge is necessary to carry
a given current with what voltage drop, and on and on ... and it's
a simple equation, whose permutations can be learned in about
10 minutes ... equally useful are the formulae for inductive and
capacitive reactance, resonance, etc., etc.

These are all basic things that every amateur should know and
understand. (Do they all? No. Should they? Yes!!!)

> I say it isn't, and
> nothing could prove this better than eliminating the code testing
> requirements for the same reason.

That's absurd ...

> After all, code testing has
> the effect of exposing prospective radio amateurs to what is
> always going to be a practical and useful communications tool
> which allows radio amateurs to practice basic radio
> communication with only entry-level skill and technology.

Certain chemicals are "useful" in agriculture ... should everyone
who wants to eat a salad be required to be sprayed with them
("exposed to them") against his/her will before being allowed to
do so? (Yes, it's an extreme and contrived example, but the
principle is EXACTLY the same.)

> If we eliminate the code testing requirement, we therefore
> demonstrate that basic communications skills are no longer
> necessary to be a licensed amateur radio operator.

Larry ... most folks don't WANT to communicate via Morse.
Nothing prevents you from doing so, but to assert that everyone
must prove they can before they can do anything on HF is
pointless and counter to the interests of the future of ham radio.
(The governments of the world and even the IARU have come
to realize this ... that YOU "don't get it" is irrelevant.)

> I, for one,
> would like to think that the present syllabus of the written tests
> still represents "basic communications skills." So, which will
> it be? Code testing, written testing, both, or neither?

The sensible option ... no code testing. Adequate written testing.
That answer is obvious.

You can fix this yourself by logging in to QRZ.com and updating your listing. Your Birthday is one of the parameters that you can are allowed to change online.

Instructions from the QRZ website:

Information that you may update with QRZ:

USA Hams may edit and/or delete: the previous callsign, grid square, county, lat/lon coordinates, birthday, QSL manager, email address and home page. All that is required is that you go to our online update page and provide us with your callsign and a real email address to which an update key may be sent. This key is yours to keep and can then be used as often as desired to update your callsign listing. The email address that you give to receive the key can be different than the one shown with your callsign (if any).

It;s easy - just a couple of keystrokes, and you'll be about 250 years younger!

73, Leo

Well, it's pretty unlikely that the guy who got busted for this back
in 1999 is doing this, unless he's incredibly stupid. The headers on
his newsgroup postings point right back to his pesonal account on
Supernews, and the FCC could subpoena his user info and usenet usage
logs from Supernews in a flash if illegal activity is involved.

More likely, it's some troll who heard about the "Porkbutt" story, and
is having some fun stirring the pot a bit. If he really is creating
interference on 3894.5 and bragging about it here, however, he could
get a guest shot on "America's Dumbest Criminals" for this one -
should the FCC get a copy of this somehow.... :)

Better yet, killfile him and create a message rule like this:

Apply this rule after the message arrives
Where the Subject line contains '3.894' or '3894' or 'bigal'
Delete it

That way you not only kill the messanger but all the
inane followups to the thread - end of problem.

Ken

Thousands of hunters, law enforcement officers, and other legitimate,
law-abiding gun owners also buy guns at gun shows and ammo at K-Mart.

> The thought occurred to me, Why in the hell can a teenager in America buy a
>weapon of mass destruction with no test or license, but to pick up a
>microphone to talk he needs to obtain a license from the federal government?

No he doesn't. There are several radio services in which no licenses
are required, or which are licensed by rule. Examples include CB, FRS,
Marine VHF, parts of the 49 mhz band where operation of 2-way radio
devices is covered under Part 15, and the experimenter's band down
below the AM broadcast band.

> I
>can understand for a vehicle, but isn't it time to do away with Ham Radio

>unlicensed gun owners? Just a thought.

Your question provides its own answer since, unlike the 12,000
murderers, ham radio operators are not untested and not unlicensed.

It occurs to me that, after "making a legitimate withdrawal" as number one, the second most used method of obtaining money from the bank happens to be a felony.

It also occurs to me that in sports, they refer to the player(s) who finish anywhere below #1 as the LOSERS.

A shotgun is not a weapon of mass destruction.

Chemical, nuclear, and biological weapons are weapons of mass
destruction.

A shotgun is classified as "small arms" - even fully automatic small
arms are not weapons of mass destruction.

5154. *Urgent* APRS and the Garmin Rino / PLC BPL

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-23 18:21:50 UTC
From: Ralph Aichinger <ralph@dolphy.pangea.at>
Message-ID: <1064340027.256432@news.liwest.at>
Source record: 78675
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.policy

First I want to explain why this is urgent:

I want to file a comment on PLC/BPL to the EU Commission
(see http://tinyurl.com/lmm3 and http://tinyurl/nkt0 , if
you live in the EU, you should file one too) and the deadline
is on 1st of October. So I really would like to have this
information as quick as possible!

What I am wondering is if the Garmin Rino

http://www.garmin.com/products/rino/

has directly or indirectly been influenced by APRS, or
if otherwise it could be said, that amateur radio has
led to or enabled the creation of this product.

Background: I want to argue that amateur radio not only
carries out purely technical experimentation, but also
experimentation into usage models and patterns, which can
lead to commercial products and business models. IMHO
this is a good argument for ham radio, especially in
europe, where wireless companies are hurting from dot.com-
style bidding-sprees for 3G frequencies/licenses, and no business
models or uses for these services are to be seen.

If you've got similar examples in recent times, I would
be interested in these too.

Thanks in advance! I will post a pointer to my text after filing.

/ralph oe5arp -- Followups directed to rrap

Leo, you are being much too hard on the lad. For the price of irritating some of us, he has given us an education about things that the most cerebral of us didn't know... Like the special calls that were assigned to the hams that didn't take any Morse CW test. Perhaps they were forced to use those 1/4 wave Dipoles. Maybe that's why we didn't know about them? 8^)

Perhaps you're right, Mike - the Morse-based callsign thing was
certainly a little-known fact. There must have been budget cuts at
the FCC, though, and the project was cancelled the project there were
no funds to buy the magic decoder rings that were required :)

I expect that he'll be back here later to add his .02 again - you
gotta admit, this guy is a master debater!

Because RTTY could be run in the 'secure', or 'green' mode. And RATT was more capable of sending LARGE volumes of messages. Due mainly to the untrained CW operators in the US Military at the time you are referencing.

Ten groups a minute is all that was required of a O5C MOS back then.

No Brian, anything at all. He obviously knows nothing about the subject. Proof you ask? Him jumping up and down in support of BPL. Any idiot knows it will trash HF.

Well then the staff needs to know something about RF also.

What do you expect tho? When the only tech types are at whats left of the monitoring stations. Everyone else seems to be lawyers.

Oops, my bad, cut and paste error - that should have read:

...and the project was cancelled because there were no funds to buy
the magic decoder rings that were required :)

And I almost forgot, we learned that, on the Gulf Coast of Texas,
there are redcoats forcibly marketing 8-track tapes. Apparently, you
do not need to listen to them (the tapes, not the redcoats), but you
do have to purchase them - because they tell you to! Bummer - that
must play hell with local tourism!

So much for vacationing in Galveston next summer - looks like we're
going back to Orlando again instead. I hate 8-tracks - they always
used to stick and wow in the winter. Then again, I haven't seen
redcoats since we went to Fort Henry in Kingston, ON a couple of years
ago, and I'm pretty sure that they were actors. A real live redcoat
would be cool! Hmmm - if the 8-track is cheap, I guess we could just
throw it away after we get a picture with the redcoat. We'll see.

Reference:

http://groups.google.com/groups?q=redcoats+8-track&hl=en&lr=&ie=UTF-8&oe=UTF-8&safe=off&se
lm=vms3em9lu81s65%40corp.supernews.com&rnum=1

(I wonder if some of these folks realize that 'Google Groups' archives
all newsgroup posts indefinitely - do a quick search on Google Groups
for KB5ZHT, and have a look a few through the 293 hits it finds. (Not
exactly what you would want someone to find if he strayed of QRZ and
looked you up one day!)

This has been going on for a while, huh?

We can, and we do, primarily because one is doomed to fail in life
without an education. You'll also note that one does not have to study
medicine and get an M.D. in order to graduate with a degree in, say,
business administration - primarily because a guy with an MBA isn't
expected to perform brain surgery. With respect to Amateur Radio,
nobody is forced to operate in CW once they're licensed, and one can
succeed in the ARS by using any one of a few dozen other modes we're
allowed to use, so forcing them to take a code test makes no sense.

>Don't look now, Clint, but welfare programs are "handouts" that give
>away valuable assets as if the recipient were entitled to them simply
>by virtue of being there with his/her hand out.

Correct. Therefore, code testing isn't a welfare program, it's a
government-subsidized life-support system for an anachronism.

wrote:

>Now, then, how does the advocation of code testing in any way correlate
>to bigotry, elitism, and/or discrimination against other Americans?

By steadfastly refusing to admit that code testing is a
government-subsidized life support system for an anachronism, and
insisting that code testing be retained, PCTAs are supporting
artificial barriers to entry into the hobby. I suspect that for many
PCTAs, and maybe even for most PCTAs, the motive for this lies not in
promoting the use of the mode, but in retaining a piece of the RF
spectrum for their own use at the exclusion of others who their no
longer exists a practical reason for keeping them out on the basis of
code proficiency.

Whether you or any of the other PCTAs care to realize it or not,
Larry, this attitude is THE reason why so many people in other facets
of hobby radio, while respecting the abilities of hams with respect to
our knowledge about radio, tend to consider us a bunch of stuffed
shirts personally. Outside the ARS, the code test is perceived (quite
correctly) as archaic and pointless except as a hazing ritual that
exists solely as a means of keeping others from joining our exclusive
little club - which is elitism by definition - and then when you get
people like WA8ULX using derogatory terms like "CBplussers" to
describe fellow hams who don't share the same interests in radio as he
does, that, Larry, is bigotry...and ULX is far from being the only ham
in here who is guilty of it.

>The
>code tests, both past and present, have proved to be achievable by people
>from all walks of life, including those with communicative disabilities up to
>and including total deafness. Try as I may, I can't find anything patently
>"discriminatory" there. So, take a shot of setting me straight -- how is
>code testing "discrimination?"

I've already shown bigotry and elitism. I'm not going to bother
getting into discriminatory - two out of three is bad enough. I'll
give you a hint, though...a Technician who passes the written test is
not qualified to operate on HF phone, but a Tech who passes a code
test *is* qualified to operate on HF phone? That makes about as much
sense as some of the junk coming into this NG from the crossposters
over in the rec.radio.cb newsgroup. Whether or not the Tech is
qualified to operate on HF phone - or PSK31 or SSTV or any other mode

besides CW - has nothing to do with whether he or she can copy Morse. You really mean to tell me that you guys who bill yourselves as superior to most other hams don't understand how stupid that looks to those outside your steadily shrinking clique of PCTAs? And you can't see the harm it does to the image of amateur radio? C'mon, guys, get your heads out of the sand, will ya? It's 2003, not 1936.

>> I've discussed that contradiction with Larry before. He does seem to
>>exclude code testing from his conservative views opposing excessive
>>government regulation.
>
>Correct, because I don't consider it to be "excessive" government
>regulation.

If it is unnecessary, it is excessive.

> I believe the government has a valid need to regulate certain
>things, especially valuable and finite resources such as the RF
>spectrum.

Last time I checked, FCC still does regulate the RF spectrum.

>Therefore, I believe that when license is to be given for the
>PRIVILEGE of free use of RF spectrum, which is worth potentially
>billions of dollars should it be converted to commerce in the commercial
>utility communications and broadcasting industries, certain government
>regulation makes good sense.

Which we have - in the case of the ARS, it's in Part 97. Other radio services are regulated by other parts of FCC regulations. Dropping code testing will not render the ARS unregulated - it will merely remove an archaic regulation that not only no longer serves any purpose vital to the well-being of the ARS, but actually is no longer in keeping with the basis and purpose of the ARS - a fact which FCC conceded in its R&O on the last round of restructuring. One would think that if an agency of the federal beaurocracy can be made to aquiesce to this fact, a few thousand regular citizens ought to be able to understand it to, yet the PCTAs continue to cling to an obvious (to everyone else) anachronism as if it were the only worthwhile pursuit in all of amateur radio. That puts PCTAs in a distinct minority, because the rest of the world understands that it is anything but a worthwhile pursuit as far as it relates to the state of communications technology in the 22nd century world.

>>If Morse Code has real value, it should be able to
>>survive in as close to a free market environment as possible.
>
>Well, that's a wonderful concept, Dwight, but history has shown that
>it doesn't work when put to the actual test.

That alone should tell you something...like maybe that the rest of the world isn't operating under the same illusions as most PCTAs seem to be suffering from.

> The No-code Technician
>experiment only served to bring us a couple hundred grand of new
>hams who self-limited their amateur radio experience to the 2-meter
>repeaters.

I disagree - the 2-meter band is merely the most popular among those bands on which their licenses grant them operating privileges. That, along with the widespread availability of equipment for operating there, makes it a matter of course that most of them are going to show up there first.

>Naturally, they all want the freedom to use HF phone, but
>that still (for now) requires that they learn the Morse code and pass
>a test, albeit at a mere 5 WPM. The fact that they are not doing so in
>any great numbers indicates that the Morse code does not have any
>particular drawing power based on it's own "merits," as the NCTA
>would infer.

Again, that ought to tell you something. It does tell me something. It tells me that either radio hobbyists in general are smarter than PCTAs seem to think they are, or that perhaps the PCTAs aren't as smart as they think they are.

To put it another way, just because a minority of hams who happen to be PCTAs have deluded themselves into thinking that an archaic testing requirement of an anachronistic operating mode is of continued benefit to the ARS or to the science of radio, does not necessarily mean that the rest of us are going to fall victim to the same fallacy. The fact that so many people aren't buying into this supposition indicates to me that perhaps NCTAs - and hams who are interested in ham radio but not in CW operation - aren't dumbing down the hobby, as the PVTAs would infer. Perhaps the dumbing down is coming from the other side of the CW fence.

>And now that there is a very bold dotted line drawn
>around even this meager requirement, the incentive has all but
>fully evaporated.

That incentive evaporated sometime around 1970. That's when the state of communications technology truly made CW obsolete for most purposes. It remains a viable communications mode, but it is far from being the most efficient, it is far from being the easiest to learn and use, and it is long past time to do away with the code testing requirement. It's doing nothing but keeping people out of the ARS for no good reason other than that the PCTAs get to hold onto their "turf" on the bands for a little while longer. Anyone who thinks differently, mention the refarming of the Novice bands to any PCTA. Then get ready to start peeling PCTAs off the ceiling.

>>I think it has
>>that value and can survive just fine without a regulation mandating testing.
>
>And I don't -- and have seen conclusive proof that it won't.

Which leaves two reasons for continuing to have a code test, and both
of them are rooted in elitism and bigotry.

Funny...part of the Basis & Purpose mentions fostering international
goodwill - yet we have so many people in the ARS who can't even be
bothered to foster goodwill on our side of the ponds. They'd prefer to
cling like koala bears to their own little slices of the RF spectrum
and the rest of us be damned. Sickening.

>First of all, FCC Commissioners are political appointees, not necessarily
>technical experts. They can, and do, depend on the advice of professional
>technical experts, who actually formulate and subsequently make
>recommendations on regulatory matters. The Commissioners mainly
>ensure that these regulations meet the needs of their respective
>political constituencies, often with numerous conflicting interests battering
>them from every angle.

None of which has anything to do with the usefulness of code testing,
so (as they say down at the barber shop), "Next!"

>Second, it is not my desire to "undermine" anyone. I don't view the
>Morse code testing requirements, past or present, to be in any way
>unachievable or otherwise discriminatory.

Ostrich...head...sand.

> In fact, I view them as being
>directly in support of the concept of learning and maintaining the use of
>a highly useful communications skill, therefore, the requirement has,
>IMHO, intrinsic merit.

"Highly" useful? At this stage of the game, probably half the licensed
hams in the world have no interest in using CW to communicate and
wouldn't know how to if they did.

>This does not "benefit me more" than anyone
>else in the ARS.

Sure it does. You've got yours, so nuts to everybody else. You'll
fight to retain that archaic, anachronistic testing requirement even
if it means there will eventually be thirty licensed hams left in the
country, all crowded onto a 2 kilohertz slice of spectrum somewhere
down around 150 kc and the only mode permitted is CW.

>Moreover, I am definitely not squelching anyone with
>different views. This newsgroup is adequate evidence of that.

I think it's more like, this NG is evidence of the fact that you
can't squelch anyone with a differing viewpoint, even if you wish
you could. You can't do it here, and you can't do it during FCC
comment periods. That's the only reason we aren't still wasting
people's time with 13wpm and 20wpm code tests. Eventually, the 5wpm
test willhead down the same road. It will be interesting to see how
many PCTAs will stick around ande continue to be VEs and elmers and
active hams and work for the good of the ARS, and how many will take

their ball and go home.

Larry, he *was* discussing the ARS. He pointed out - quite correctly I might add - that the ARS is the only place in the RF spectrum where an archaic operating mode is widely believed by a significant number of the operators therein to reign supreme despite overwhelming evidence to the contrary. Ham radio organizations widely lament the lack of growth in the hobby, ham radio clubs have a fraction of their former membership counts, ham radio magazines print articles and reader letters lamenting the lack of activity even on the 2m repeaters, and yet we have people who continue to support a testing requirement that is probably more responsible for that than any other single factor.

The rest of the world is in the 22nd century. The ARS is still mired in the 19th century. You once asked something to the effect of, where are all the hams who were going to give us high-speed data networks over radio once the no-code licenses came out?

The answer is, we didn't get the no-code licenses unti it was 15 years too late, by which time those potential hams were already working for companies like Microsoft and couldn't have cared less any more about ham radio. That's the way it is - and if the PCTAs have their way, that's the way it'll stay. Unfortunately, something tells me that's just fine with the PCTAs, who all too often seem to me as if they have their own selfish interests in mind rather than the best interests of the ARS.

Obviously a mistake, then...so what is your rationale for compounding
that mistake by continuing to perpetuate it any longer?

>Incentive
>Licensing was an ARRL initiative, and it was done to ensure that the
>Morse/CW mode would continue to be used in spite of the increasing
>popularity of SSB and digital modes.

Another obvious mistake...let's deliberately restrict progress in the
ARS by clinging to archaic technology like koala bears. Real astute
leadership from the League there...NOT!

>It was actually a very brilliant plan,

Actually it was a very stupid plan, as shown by the test of time.

> but was spoiled by the resentment caused by the lack of full
>"grandfathering" of the existing Generals to the new Amateur Extra
>class. If only that had been done, we may not be having this debate
>today.

To say nothing of the resentment caused by deciding in the face of
rapidly advancing communications technology to remain rooted in an
anachronism left over from before the dawn of the 20th century. If
only that had not been done, the brightest young technological minds
of two full generations might have been drawn to amateur radio instead
of computers and the landline BBSes and finally the Internet, and
there would be no need for this silly debate because the ARS would
have stayed on the cutting ege of communications technology instead of
having made the decision to allow itself to be left in the dust.

>During the last ARRL 10-Meter Contest, I worked over 160 QSO's on

Excluding contests, the phone segments are also very alive and full of
stations - no thanks to FISTS or to the old CW-geezers chasing all
that paper....and no thanks to the code test, for that matter.

>The efforts being made to eliminate the Morse code test requirement
>are motivated by one thing and one thing only:

Common sense.

> laziness.

Unfortunately, common sense is not necessarily very common.

>The laziness
>born of a lack of desire to learn and gain reasonable proficiency in a
>proven, useful communications skill.

Being a good phone contest operator requires developing some skills
too, Larry. You guys might have done better in Sweepstakes Phone if
you hadn't been to lazy to gain reasonable proficiency in this proven,
useful communications skill - which is even more widely used than CW,
and therefore makes even more sense to take the time to learn.

But, like I said, common sense is... <sigh>

> And, considering the nature of
>the ARS, indulging that laziness would be an abomination.

The dicstionary on the shelf here doesn't list "abomination" but it
does define "abominable" as follows:

1. hateful; disgusting: Leprosy is an abominable disease.
2. very unpleasant: abominable manners.

Pretty much sounds like the way that many of us feel about code
testing, and it's probably how some people feel about the code itself,
but the fact remains that this pointless adherence to an anachronism
is an aberration that exists only in the ARS, and nowhere else. Small
wonder that we're the subject of ridicule elsewhere in the radio hobby
community because of it.

>>Therefore, code testing is not
>>essential to the Amateur Radio Service.
>
>It most certainly is, if the ARS wishes to continue to develop radio
>operators capable of exploiting the many benefits and advantages
>of the Morse/CW mode.

And while we're developing radio operators who have proficiency with
an operating mode that nobody but hams uses, we're failing to devlop
operators proficient in the skills that might actually be useful out
there in the real world. Yet, old-timers lament the fact that these
days, having a ham license won't get you a job bagging groceries, let
alone any meaningful work in a communications-related field. Small
wonder, when the ARS itself decided to stay rooted in 19th century
technology, eh?

>The FCC has stated repeatedly that whether or not it will have an
>interesting in the "continued use of this mode" depends upon a
>consensus of the amateur radio community itself.

Half of which, as no-code Techs, has already voted, by deciding not to
join the PCTAs in deluding themselves about the usefulness of an
anachronistic, 19th-century operating mode.

>Therefore,
>unfortunately, we will be at the mercy of the majority. Us PCTA's
>may not like the outcome, but that is the risk one takes when living

>As already stated by N2EY, this particular logic could then be applied to
>testing for knowledge of any of the requirements for technical knowledge,
>since radio amateurs no longer have the ability to design, build, and repair

>state-of-the art communications gear unless they possess professional-
>grade technical knowledge, skills, and facilities.

Interesting, isn't it, to note that this separation between professional-grade technical knowledge and that available in the ARS started shortly after the ARS decided to remain in the Dark Ages while the rest of the world took off on the Technology Boom. We stayed in the Morse age while the rest of the world entered the Information Age. Yeah, incentive licensing was a great idea. Personally, I'd rank it right up there with sending troops to Vietnam.

> And, since this is the
>AMATEUR Radio Service, that is an unreasonable expectation.

Of course it is! Now, an example of a *reasonable* expectation would be to expect proficiency in a method of communications that is about 150 years old and that nobody else uses anymore. That *really* encourages people to become part of the ARS and be a part of the supposed advancement of the radio art that the Basis & Purpose portion of Part 97 says we're supposed to be all about, doesn't it?

>Therefore,
>if code testing *is* eliminated, then we may as well also go to a simple
>license application process, with, at most, an open-book test on rules and
>regulations. That would then serve the needs of the dumbed-down
>licensing process you would seem to prefer.

Come on, Larry. There are guys who can do 30, 40, or 50 wpm that can't even *program* a modern transciever, let alone fix the damned thing when one of the surface-mount components fails that is too small for many of us to even *see* let alone solder one onto a PC board. These rigs have been designed so the owners *can't* fix them, so that they have to be dragged back to the dealer or shipped to the factory for service, with appropriate outlay of cash since naturally the component isn't going to fail until, oh, I dunno, about 6.2 seconds after the warranty expires. Chances are that the "factory service" involves removing the board the failed component is on and replacing it with a brand new one because it isn't cost--effective to do component-level repairs on mass-produced PC boards.

Following this, the rig gets packed up and shipped back to its owner, who opens the package, curses a blue streak when he sees the bottom line on the invoice, makes a New Years' Resolution to become a boat anchor fanatic, then unpacks the rig and puts it back on the desk in his shack. It really doesn't matter if the guy doing the unpacking can copy at 50 wpm or doesn't know a dit from a dah, the result is going to be the same because that's how the manufacturer designed it. If you must blame somebody for that, Larry, then I respectfully suggest that you place the blame not on the NCTAs, but on the design engineers at YaeComWood, where it rightfully belongs - and remember that some of them are hams, who apparently have professional-grade technical knowledge, skills, and facilities, whether they ever passed a code

test or not.

Not sure how the thread made it past my kill file, but to respond to your comment, I only went with what I was told and seen for myself as witnessed above.. IF there was more than one incident mentioned, then I didn't notice in my speed read of the article.
But, if it's been more than once, then maybe it's time they show him they're done playing games.
Lou

My father has a .270 Win and it's a nice rifle. Wish I got one for
opening a bank account. Wished I lived in Colorado, too.

> Lennie!
>

His point in making that statement was that the whole argument of
"all that is basic MUST be continued and included and not omitted
or deleted" is defeated in one swift stroke by bringing up the fact
that the very FIRST radio wavelength energy signal sent was via
a spark... so, by definition, spark is as "basic" as you can get,
and it's actually outlawed.

The conclusion, and the ONLY conclusion, that can be draw from
this is that the conept of something being "basic" doesn't necessarily
mean that it deserves retaining and preservation.

>
> > You are trying to sell a product that isn't being bought.

He does that to distract from the fact that he has no valid arguments and is incapable of debating in any logical fashion. He is known to go onto long tangents leading to incredible non-sequiters. Most of us have long ago killfiled him because of it though there are a couple of people who continue to wrangle with him.

I never see his posts anymore.

You've got to define sound first. For example if you simply define it as waveforms in the air, then yes it does make a sound. However if you define it as the result when waveforms in the air are converted to a form that can be interpreted by the brain, then it doesn't make a sound.

Either way though you are right that the tree is still there.

Regardless of one's stance on the code, reviewing the history of the FCC
shows that they are NOT necessarily concerned with what's best for the ARS.
If they were, BPL would never have gotten as far as it has.

I hear that Captain Truth was invited up to give the Guest Sermon
at one of those "snake-handling" churches up in the mountains of
Western NC recently. (That's right, C.T. was permitted to learn on the
lectern and speak to the congregation) What power! They were
all rapt with attention as he eventually launched into his homily:
"Why Does God Give Us Gastro-enteritis ?" Then, proclaiming
with the power of Daniel Webster, he thundered: "So we can FART
like THIS glub dammit!!" Then, grasping the lectern's side white knuckled
and with a look of sheer insane delight in his bloodshot eyes, he promptly
raised his right leg to a 45ï¿½ angle and let fly with a pants-splitting
anyl depth charge of hitherto unheard of duration, bass and volume.

His lovely portly wife, Betty Dee Badabumski, who wonders every day
how she landed him for a hubby, asked several people "who that man up
there was?" before the sheer stench and rising barometric pressure
sent everyone running for the fresh NC mountain air via the doors
and 2 out windows. (the snakes in the cage were also gone, having
bent the wire cages and slithered out the back door) C.T. was asked
not to return by spontaneous vote, wherupon he hopped into his
1977 Caddy with Betty Dee and was last seen heading back in the
direction of Hickory...

(word has it that he's been invited to call next week
at the 1st AME Church of The Apostolic Friday
night Bingo game. Let's hope they don't let him
near the buckets of fried chicken and Pepsi while
he's pullin numbered ping-pong bingo balls...)

Given the detail and extent of the rules, we could right a killer test on rules and regs. Then require people to take and pass that before taking any of the elements for specific licenses. i.e. They have to know the rules in detail before being tested on the theory, technical knowledge, and operating practices for the licenses classes.

My point was that in all activities, the already experienced people set the
standards. Students and beginners, whether adults or children, simply don't
have the qualifications to do so. So far polls of hams who have passed
code, i.e. the experienced, have a majority favoring it.

Heh, I hate to burst your bubble but you're not *that* evasive or
genuine.... it's quite obvious which side of the fence you stand on
due to the one-sided nature of your attacks. You have claimed
that I have used name-calling and other descriptions of
personal attack tactics, when in fact you have done this as I
have previously quoted... and have, FURTHERMORE,
not chastized the PCTA crowd (if, in fact, you're NOT one of
thier apologists if not member) when they have used
descriptions such as "moron", "dumb fuck", etc. Not a peep.

Therefore, as I said, if you are a not a member you are
certainly a sympathizer or an apologist for them, which
as far as I am care puts you in thier camp all the same.

PRAY FOR THE SOULS OF THE FRENCH

"say it isn't so!" ..... The french proposal going
to the United Nations pertaining to the iraqi
situation is to ask for a RETURN of
the baathist part. OH yes, you read that right...
The party responsible for gassing tens of
thousands of it's own people, defying
international laws, pileing bodies in mass
graves as an aftermath of it's bloody internal
policies and many other crimes against
humanity, is going to have a cheerleader
from the country who benifited from it's oil
contracts WITH the baathist party (go
figure!)...And, finally, the french want ALL
mention of liberation taken out of ALL
paperwork and replaced with the word
"occupation", due to the fact that they do
not like its positive connotation. This from
a country that occupied Algeria for 132 years.

Actually, it looks like "BIG AL" might be a fan of K40KA who's trying to stir things up. He's been using a few key details from the article in his posts. For example, he never mentioned the callsign K40KA until shortly after I posted that news article.

I'm going to traceroute his IP and see at least what part of the country he's in.
Results later.

> I'm going to put him in my killfile along with Len 0ver 21.

EXCELLENT way to attract people to your cause...
for those of you undecideds on the topic reading, here is yet
ANOTHER soul that dearly loves the continued use
of morse code testing requirements for obtaining a license,
but cannot debate the matter openly and instead chooses
to outright IGNORE people who want to present an
opposing view. Like about 4 or 5 others in here that
are of his ilk, he proverbially pulls the covers over his
head when controversy is presented to him, when
debate is offered on a topic.

Take it to heart and understand with full confidence
that this represents the great majority of the
PCTA crowd (pro-code test agenda) crowd. They
REFUSE to hear any differing opinions; they get
childish when they run out of ideas and information
to back up thier position and start name calling all
along the insult spectrum from the mild "LAZY!"
to the vulgar expressions of "DUMB F__K!".

So when you decide to start making up your own minds
on the issue, understand that while those of us who
seek to question what is easly proven as misplaced
values and inappropriate use of FCC resources as
well as VE testers, not to mention a complete waste of
time when considering the "non ham radio world", and
offer debate and choose to talk about it, those
who staunchly defend it (the old gaurd as it were)
go ballistic and totally reactionary on the matter.

FYI.... just to let you know the character of the people
on either side of the debate.

I am not a member of NCI but I do support most of
thier agenda, but I could not and have not found a
better advocate for them than simply listening to
the PCTA crowd, or at least as it is represented
in here.

Now let's move forward with the ham radio world
and continue it's modernization.

PRAY FOR THE SOULS OF THE FRENCH

"say it isn't so!" ..... The french proposal going
to the United Nations pertaining to the iraqi
situation is to ask for a RETURN of
the baathist part. OH yes, you read that right...
The party responsible for gassing tens of
thousands of it's own people, defying
international laws, pileing bodies in mass
graves as an aftermath of it's bloody internal
policies and many other crimes against
humanity, is going to have a cheerleader
from the country who benifited from it's oil
contracts WITH the baathist party (go
figure!)...And, finally, the french want ALL
mention of liberation taken out of ALL
paperwork and replaced with the word
"occupation", due to the fact that they do
not like its positive connotation. This from
a country that occupied Algeria for 132 years.

Actually, you're probably right. You know, he didn't even start using that
callsign until after the article I posted. I'm going to traceroute his IP so
we know his general location and the name of his ISP. If anyone had actually
heard him on the air we could go straight to the FCC.
Are there any confirmed reports of this guy actually transmitting?

As most of you know, there is a troll on these boards claiming to be K40KA. I'm still trying to figure out whether this guy is just trying to be annoying. If he is actually doing what he said he is, we can go to the FCC, so I'd like to find out if he's actually on the air. Not owning any HF equipment, I can't do much my self. If somebody could listen in when he says he'll be transmitting...

Well first off, the reference violation above is long done with. He spent his time in radio prison and returned to the HF bands. He has basically learned his lesson, this time. And has been a decent operator for several years now.

What I was refering to was he was removed from the radio voluntarily in lieu of being fined a big chunk of bux back in the 70s. He stayed off the air for years. Returned as KJ4JX and began his crap again. He later got his original call back under the vanity system.

He has been a QRMer for many years. BUT as stated above has finally seen the light.

This crap you see here from "BIG AL" is BS.. And same for the "3894.5" crap. Its just a troll.

But I wanted to set the record straight.

Dan/W4NTI

It'd s troll. Big AL gets on occasionaly on 3894.5 and talks with whats left of his "Abernathy Radio Group". Without his Henry 8K of course.

So don't worry about it.

Dan/W4NTI

5213. Re: wanna talk SHUDDER?

Dee,

Excellent point. I was going for the latter - sound is best defined
as vibrations detected by the ear. Vibrations are of course created
by the trww falling, but remain only vibrations until the ear receives
them. As I understand it, anyway.

And the tree, both the one that made the sound and the metaphoric
'tree' referred to in the posting is very much still there!

No transmissions that I could hear tonight, leading me to belive that
he is bogus. His ISP, however, cannot be seen, as he is posting
through a third-party newsgroup service, Supernews. We can only trace
him back that far - by the message headers.

Supernews, however, has a very strict Terms Of Service" (TOS)
agreement with its subscribers, which prohibit multiple postings of
this type of nuisance message and nym shifting (at least three
different ones so far, including stealing mine for a while :)).

A few complaints to abuse@supernews.com from the folks in these
newsgroups, with a copy of some of these messages **including
headers** , and he will be 'off the air' here quicker faster than he
can spell FCC! If he can, that is...

I don't know about you, Larry, but I like to know a lot about
everything I do. That goes for cars, amateur radio, computers,
housework, history, or whatever. I suspect you feel at least somewhat
this way too. Strange that there is a whole culture built up that
celebrates ignorance.

That's why if my car breaks down on the road, I stand a good chance of
getting it running again, why I know it isn't likely the F.C.C. won't
test me on the design of a 1/4 wave dipole, and why I knew that there
wasn't any special callsigns for non-coded amateurs.

Not that I don't make mistakes, but I don't come into newsgroups acting
as if I know everything either! 8^)

Or you could try an excercise in "skin toughening", Arnie (don't take
it as an insult, I've done the same thing) It is an amazingly empowering
thing when you can read some of the merde posted by someone that thrives
on confrontation and provocation, knowing that they are failing to
achieve their goal with you. After the first few ignored posts, it's fun.

Good idea. When I passed the Basic test (Canadian licence, same type of questions and format as the entry-level US one - Technician, I think...?), I walked out of the room with two things: A licence. And no real practical idea on how to operate a radio station. I had the theory, and legally what not to do, but how to set up a station and initiate a QSO? On-air procedures and etiquette? Missing details galore....

I bought a used 2M HT and the RAC Operating Guide, downloaded a repeater list, listened on-air for a while, and figured out how to get through the first few QSOs. From there, the kind folks on the air guided me through the process, overlooking my frequent errors. Trial by fire. No I=E/R stuff to help me through here!

Going on HF was worse - passed the morse test, then...learning curve again (and still - 6 months later) - some of the VHF knowledge worked, but new skills were required. And the equipment is more complex to set up and use than my HT....had to build an antenna (a Big Antenna !), and go from there. And a dummy load. And an SWR meter. Etcetera. Still learning, but the folks on 40M have been great, and got me up to speed pretty quickly.

Personally, I'd like to see practical operating knowledge become part of the licence procedure. Not for the sake of testing , or making the licence harder to get, or screening out the incompetent and unmotivated - but to ensure that when you do get the licence, you have an excellent idea what is required to actually use it. Like driving a car, for example - if folks got their licence based entirely on the written test, we might not all be reading this post right now.....:).

And the best possible resource for creating a syllabus like that - the experienced amateur user community. (not me - I'm still learning! Maybe later....)

Just my .02....

Actually, I don't worry about the personal insults at all. I find most of them laughable. But, I guess each of us has that *one* thing that bugs them. Given my family history, for me *that's* it. But you are right, ignoring them will tend to make them go away and deprive them of the satisfaction. Thanks for the advice. It is well received.

Dan:

Forgive my cynicism, but since when has practical knowledge and
experience in a particular field of endeavor ever been a requirement
to become a political appointee? Mr. Powell became FCC Chairman
because he's a rare commodity in Washington politics: a black
Republican. And, I guess, being Colin Powell's son didn't hurt much,
either. Michael gave President Bush another way to pay off Secretary
of State Powell for not running against him in the Presidential race,
and add some "diversity" to his administration. A double-whammy.
I just wonder what kind of new nightmare we'll get in Michael's place?

Of course, in fairness to Chairman Powell, he does have a point about
the political back stabbing. However, I guess that's what we get when
we allow our government to be run mainly by career politicians who are
all beholden to special interests. I believe that the only way to correct
this situation is to never vote for an incumbent seeking his third or
subsequent term in a non-term limited office.

Not really. All questions and answers are filtered through the QPC and again through the FCC. "Killer" Q&A can be rejected.

>Then require people to take and pass that before taking any
>of the elements for specific licenses. i.e. They have to know the rules in
>detail before being tested on the theory, technical knowledge, and operating
>practices for the licenses classes.

Better yet - split the test into different subelements and require a passing grade in each. No getting all the regs questions wrong and all the theory questions right (or vice versa) and still passing.

I suggested that in my comments to 98-143. FCC went the other way. Tells ya somethin'.

It's also *not* what I wrote.

What I was trying to say was that, given the characteristics of modern ham
equipment and its popularity with hams, that there was not the same *need* for
hams to be as knowledgeable in radio *theory* as there was years ago.

I think hams *should* be knowledgeable in theory today - just as I think they
should strive for operating skills. Including Morse code skills.

But there's a big difference betwen *should know* and *need to know*.

>just as those who want to (and don't have a

>in performance to (or better than) off the shelf commercial equipment.

Maybe, Carl - but we'll probably never know because most hams simply won't do that, for a variety of reasons.

Agreed! And if someone has the interest, the time and the resources, they can do that sort of thing.

But most simply won't, because they can buy something ready built for less time, money and aggravation. And their store-bought set will have some resale value.

>The techniques are different than the old "thru-hole" methods,
>but they are really no more difficult and are certainly within
>reach of anyone who cares to learn.

I disagree. Not everyone's eyesight and manual dexterity are up to the task.
>
>(and, amateur radio is *supposed* to encourage the learning
>of useful technical skills, advancing the art, etc.)

Of course! - but the word is *encourage* - not "force down their throats".
>
>> that most of the technical
>> knowledge in the present written tests can also be eliminated as
>> a licensing requirement. I totally agree.
>
>So, you would prefer that the amateur ranks be centered on
>appliance operators (as long as they can beep fast)???

"beep fast"??? 20 wpm is not fast. 5 wpm is certainly not fast.

>That's
>the death warrant for amateur radio if it ever becomes totally
>that way.

Look around you, Carl. What percentage of hams are homebrewing their stations,
or a significant part thereof? Particularly HF and VHF-low UHF stations?

>Reducing the technical skill of amateurs to your level and
>keeping "Morse as king" may make you FEEL superior,
>Larry, but it's really the TRUE "dumbing down" of the
>amateur radio service ...

You're missing the point.

The question is not whether hams *should* be technically knowledgeable, but
whether such knowledge *must be* tested.
>
>Other than as a recreational activity in the ARS (which is fine),
>the world has passed Morse by.

Other than as a recreational activity, the world has also passed homebrewing
most electronic equipment by. Wasn't SMT developed to improve *automated*
electronic manufacturing?

>What's needed in the "pool of trained operators" is no longer
>a cadre of Morseists, but folks who have the technical
>knowledge and skill to build, field, and maintain systems that
>can meet the communications needs of EMS agencies ... and
>that's at a level of technology far beyond OOK Morse.

The current writtens don't test tehory knoweldge at anything like that level.
>
>> In what way is it
>> "reasonable and rational" for someone to know Ohm's Law or
>> even the most basic digital theory, if they'll never have to use it
>> in their actual practice as a radio amateur?
>
>Ohm's Law is a tool that can be used for many things ... biasing
>circuits, figuring out what size wire gauge is necessary to carry
>a given current with what voltage drop, and on and on ... and it's
>a simple equation, whose permutations can be learned in about
>10 minutes ... equally useful are the formulae for inductive and
>capacitive reactance, resonance, etc., etc.

Sure - if a person takes the time and trouble to learn the concepts and how to use them.

But should such learning be voluntary or should it be *forced* on everyone as a condition of being licensed? Particularly those who have no interest in it?

>These are all basic things that every amateur should know and
>understand. (Do they all? No. Should they? Yes!!!)

Agreed - but how is that evr going to happen?

>> I say it isn't, and
>> nothing could prove this better than eliminating the code testing
>> requirements for the same reason.
>
>That's absurd ...
>
>> After all, code testing has
>> the effect of exposing prospective radio amateurs to what is

>who wants to eat a salad be required to be sprayed with them
>("exposed to them") against his/her will before being allowed to
>do so? (Yes, it's an extreme and contrived example, but the
>principle is EXACTLY the same.)

No, it has nothing to do with the subject.

>> If we eliminate the code testing requirement, we therefore
>> demonstrate that basic communications skills are no longer
>> necessary to be a licensed amateur radio operator.
>
>Larry ... most folks don't WANT to communicate via Morse.

Maybe. With you as the salesman and judge of what people want, I wouldn't be surprised.....

Carl - most folks don't WANT to build their own radios, either.

>Nothing prevents you from doing so, but to assert that everyone
>must prove they can before they can do anything on HF is
>pointless and counter to the interests of the future of ham radio.
>(The governments of the world and even the IARU have come
>to realize this ... that YOU "don't get it" is irrelevant.)

They also don;t demand that hams imitate automated soldering machines...

>> I, for one,
>> would like to think that the present syllabus of the written tests
>> still represents "basic communications skills." So, which will

>> it be? Code testing, written testing, both, or neither?
>
>The sensible option ... no code testing. Adequate written testing.
>That answer is obvious.
>
What constitutes "adequate"? How are you going to defend the written tests if someone disagrees with your interpretation of "adequate"?

This isn't a straw argument - it's the next bend in the road. There's a lot of hams out there who think "incentive licensing" was a mistake. Heck, there was a proposal by QCWA some time back to give Extra privs to all pre-Nov.22 1968 Generals and Advanceds.

Consider this, Carl: The radio operating privileges of a General and an Extra are equivalent in every way except for a few subbands of four HF bands. Tell us why someone *needs* to know the stuff in the Extra syllabus in order to operate on those subbands.

How many countries have only one class of amateur license? How many have two (limited and full privileges)?

Well, things aren't always quite that black-and-white, Clint. I am certainly not a sympathizer nor apologist for either side of the arguement. Not beacuse I am firmly in one camp or the other - it's much simpler than that. And frankly, from what I've seen, some of the folks here need more than an apologist to get 'em through the day...

So, here it is - my position: I don't really care that much one way or the other. But hear me out. If code testing stays, then that's cool - status quo - where we are today. I learned it, I'm in, no sweat. If code goes - well, it's been a requirement for a long, long time, but perhaps its time to move on, much like the shipping industry did back in '99, and European amateurs are doing right now. (after all, we'd look pretty ridiculous if, say, the CEPT Level 2 operators in Sixpackistan could talk to us, but our guys at the equivalent level of licence were stuck above 30 MHz.) Either way, I learned it (5 WPM, certainly not a speed demon here...) because it was the current "price of admission" to HF. If I had to learn to bowl to get on 40M, I would have bought the shoes and gone to the alley - I had wanted to go on HF since I was a kid doing SWL stuff. So I did!

But, I really don't want to get too passionate about an operating mode - sure, I like it (and I'm finding it to be actually very useful under some conditions, and my speed is actually coming up - maybe 6 WPM now :)), but I am objective enough to see that it is not really required to operate a station. I can use SSB, and a staggering array of digital modes, and communicate all over the globe. (except with the porkbutt idiot - he wasn't there : ( ). But, because I like something, do I believe that you must too? No. Do I believe that you should be forced to learn it to get in to this part of the hobby? No, as long as it is not a legal requirement to do so. Do I believe that learning Morse makes a better amateur - well, I might have before I met some of the folks here... - seriously, I haven't seen any hard evidence to support that theory. Do I believe that because the hobby has always had a code requirement, that it should continue forever? Certainly not - although there is a lot to be said for tradition - if the majority want to keep it, I can live with that. If its time has ended, however, I am free to continue to use it, develop my skills and communicate with those who share my interest to my heart's delight. No loss there either.

In short, Clint, I'm not sure if you will understand where I'm coming from on this issue - people tend to treat it like a contest, where one side has to win, the Cowboys vs. the 49ers, my team is better, blah blah - the reality is, the world is changing, countries all over the world are dropping the requirement fairly quickly - and we really

don't have a hell of a lot of control over it. In the results of the Canadian survey that I posted to the group, for example, over two thirds of those who voted chose to let morse code drop from the requirements. And, over two thirds want to amend the testing to replace it with something else. Better practical assessment of candidates and more operating knowledge was one suggestion. I posted that survey because our two countries are quite close, and tend to think much more alike than, say, the US and Europe. It may well foreshadow a similar poll down there. Believe me, it's as passionate an arguement up here between Amateurs as it is in the States.

In short, to restate, I don't care too much one way or the other. perhaps because I didn't go through the rigourous testing that the Extras did years ago. I didn't have to draw schematics on my test, or answer essay-type questions, and pass 20 WPM Morse - many of these fellows did, though, and it must burn them up to see us get in there today with multiple choice answers and 5 WPM code. For them, no code is the final insult....("bad enough we got "Nickel Extras now....grumble grumble...CBPlussers coming soon.....grumble)

But, being objective here, it's probably a given - we all went to 5 WPM code, a while back and many said that would never happen. And if the rest of the world goes no code, then historically we will go along. Eventually. Always have. Its a community!

Now stop debating, Clint - for God's sake, you'll go blind :)

73, Leo

BTW, what's with the French stuff you posted - je suis anglais, mon petit chou....

Oh yes.... definitely.
I do wonder, however, how one is suppose to immediately
ascertain the difference when one is only reading a mere NG post.

--
PRAY FOR THE SOULS OF THE FRENCH

"say it isn't so!" ..... The french proposal going
to the United Nations pertaining to the iraqi
situation is to ask for a RETURN of
the baathist part. OH yes, you read that right...
The party responsible for gassing tens of
thousands of it's own people, defying
international laws, pileing bodies in mass
graves as an aftermath of it's bloody internal
policies and many other crimes against
humanity, is going to have a cheerleader
from the country who benifited from it's oil
contracts WITH the baathist party (go
figure!)...And, finally, the french want ALL
mention of liberation taken out of ALL
paperwork and replaced with the word
"occupation", due to the fact that they do
not like its positive connotation. This from
a country that occupied Algeria for 132 years.

Kim, the PCTA crowd has proven itself, above and beyond all
other descriptions, nothing short of totally hypocritical.

When I present evidence and facts to support the NCTA crowd's
ideas, they claim that they are all spurious and non-applicable
conclusions.

Then, in the same breath, they attempt to use such a condescending
line of thought... just like Len pointed out, they just showed that
they think of those who do not care to have morse code training
crammed down thier throats as "children".

> My point was that in all activities, the already experienced people set
the
> standards.

No WONDER you are so frustrated. Do you REALLY believe that,
in society today, that those who are the most veteran with the most
experience in a field REALLY set the standards? Colleges and
instutitions of higher learning are filled to the BRIN with
tenured professors that have little or no experience in the world outside
of the campus they teach on; politicians often hold thier offices for
decades without ever having had a real job (bill clinton).

It's a good concept in utopia, but in the real world, such is rarely
ever the case. Especially in a democracy where people are
elected into office (representatives) or appointed to offices
by those elected (supreme court justices).

I doubt very seriously anybody outside of the half-dozen
PCTA's that are herding together with you in this debate
see this line of thinking as anything more than condescending
and in fact makes you appear quite elitist. A word to the wise;
elitists are very rarely ever given the respect that they feel
they deserve- on the contrary, they usually tend to start
to arouse great levels of contempt and resentment with the
very people they feel they are trying to "help", for a lack
of a better word.

This is why the NCTA underlieing beliefs are catching on
so quickly and gaining steam.

> So far polls of hams who have passed

Just thought I'd add my two cents worth to the subject....It's about
time the FCC eradicated this ancient mode of communicaton. The FEDS
even stopped using it...Time for Amateur Radio to do the same!

CW can be coded as well. As long as everyone's o the same "page"
should work OK. Authenticate.

And RATT was
> more capable of sending LARGE volumes of messages.

Tell me about the error rate, too.

Due mainly to the
> untrained CW operators in the US Military at the time you are referencing.

So the Amateur Radio Service didn't act as a pool of trained operators
for the military?

> Ten groups a minute is all that was required of a O5C MOS back then.
>
> Dan/W4NTI

Kind of negates many of the arguments for forcing people to test for
code, doesn't it?

Mike:

Considering the infamous vagaries in the WX at Dayton that time of
year, I think an indoor venue would be best. A restaurant with a good-
sized banquet room would probably be best, since then everyone
could eat and drink whatever they wanted. Is anyone familiar enough
with the facilities available in the Dayton area to make any suggestions?

Ryan:

We'll see how many people we can get to commit to being there. As I
already said, I won't know until the vacation bids are done at the end
of the year. However, considering that Dayton usually falls during a
time of the year that is relatively free of other holidays, it should be
quite doable for me. I'm going to start looking in to a hotel reservation
in a place with a party/conference room big enough to hold us, unless
someone else already has done so and can arrange for the venue.
Let's keep this on the back burner, but with the heat turned up a bit.

Brian:

Ah, yes, Colorado. Beautiful country. However, with urban sprawl
happening everywhere in the state, and California-style liberal politics
gaining a foothold, with the high taxes that go with it, it's not exactly
a place I'd like to live anymore. It may be OK for now, but it is
going downhill faster than a bobsled.

Jim:

Like it or not, we're definitely heading in that direction. I'd like to think
it's possible to hold the line somewhere, but in light of the fact that
abolition of the code testing requirement is almost a sure thing, the
rest of the dominoes will surely fall shortly thereafter. Once they do,
we'll most likely experience a major loss of spectrum allocations in
the ARS. Ironically, that will surely happen in the regions above
500 MHz, where there hasn't been any code testing at all for over
a decade.

What do you expect, Dick? After all, I worked for the government for several decades. :)

Let me put it another way. I think the FCC is concerned about the best interests of the ARS, within the confines of reality. We have to remember the ARS is not the only pot on the stove - the FCC deals with many other services and has to balance the needs of each service against the others (and that includes the ARS). That means we're not always going to exactly what we want, exactly when and how we want it. But that certainly doesn't mean the FCC is not concerned with the best interests of the ARS or, as some have suggested, has an agenda against it. We have a massive amount of frequencies to play with. We have more modes to play with than most radio services. We have more freedoms (to build or modify out own equipment and so on) than most radio services. When you look at the whole picture, it's fairly hard to complain too much.

Don't forget BPL and all that goes with. Just because Cmsr Powell may
leave doesn't mean it goes too. The less ham radio is percieved to have
full value the less important it is to protect it and where it lives.

Maybe, but if you don't believe that very "reality" is a fast moving
target you just haven't been paying proper attention for many years.

I would not necessarily totally agree with that statement as even though I
am not a master electronics tech, I still can debug a problem with a few
basic pieces of equipment and a schematic. Also, the
electronics/electricity knowledge is important in dealing with alot of
different things in amateur radio, not just "debugging" a Icom 706 (or other
radio) radio problem.

I personally believe that the written tests need to be more stringent, as most of the tests I have had to take were definitely more than 35-50 questions, more like 100-250 range. As far as the question pool, I have no problem with the questions themselves being released, but the answers shouldn't. At least if the question pool (questions only) was that way, it would encourage people to research the correct answer. That is what I did as a final study tool, after reading and re-reading many times..... They could also incorporate "scenario" questions as well.

All we are here is merely a typeset or font! Until I either talk to the person in person, on the phone or over the air, all of these people here are merely fictional characters in my book. No way to really prove it is even them posting for that matter, and I take most negative comments with a grain of salt in that matter. To me it is purely entertainment, with the rare, occasional educational value to it.

I would agree as well, because after sitting down and actually chatting with all of these people, we might actually find out that some of these people are not really as bad as we think. At least we then could say we actually "have gotten to know" each other and not just see them for the way in which they communicate here, which may not necessarily be the way they are in person. Can you imagine that even Brucie might actually be a decent person in real life? Hell, anything is possible.

I had another idea, of which I thought would be cool..... Since we all need to practice on message handling/sending, I think it would be cool to get some type of message traffic going with RRAP people as the participants. The only problem I have is, with sending message traffic, everything I have learned from "old school" hams is that you MUST have a phone number included

with the message traffic. I personally do not wish to have my number go through the system which now is a cellphone number, as opposed to a landline number. Am I wrong in my information that within a messagegram that you MUST include a phone number????

If I am not wrong, anyone feel like sharing traffic ?? Send your interest and contact info that you wish to use to my email address of kc8pmxNO JUNK OR SPAM@diamondcs.net (remove the NO JUNK OR SPAM to reply.) I definitely can always use the practice, and what the hell, it might actually be fun!

Well, Larry, that reply is all you're going to get because that reply is the only truthful response to the issues you raised.

> It most certainly is, if the ARS wishes to continue to
> develop radio operators capable of exploiting the
> many benefits and advantages of the Morse/CW
> mode. (snip)

And why would the ARS wish to continue to specifically develop radio operators capable of using code? What benefit does it offer? Not what it offers you, but what benefit does it offer to the ARS (here is your opportunity to show your position is not just self-serving)? How are the goals and purposes of the ARS served by continued skill testing of this one operating mode? How will this (code skill testing) help to keep the ARS abreast of modern technology, insuring our continued value to others? How will this help move the ARS into the future (where we should be mainly focused)?

> (snip) As already stated by N2EY, this particular logic
> could then be applied to (snip)

Already addressed in my response to N2EY.

Sorry, but you got it the wrong way around. 'Old' Class A-amateurs (HF)
don't even know what BPL is. They are (in your terms) the 'retarded masses'.
Modern Class 'B' amateurs (technically very proficient) know what BPL is and
that also the > 30 MHz bands are to be protected.

Not that I am not interested in HF though! All amateur bands need to be
protected.

Stating that BPL does not matter anymore because no-coders are allowed to
operate on HF as well, means that you don't care about radio amateurism.
Otherwise, you'd better fight hard to keep no-coders of the HF-bands instead
of complaining about them when they do enter the HF-bands.

If you really feel that the HF bands are 'lost' because of no-coders
entering them, please give up your HF-licence and move on to another hobby.
You lost your perspective on radio amateurism.

heh heh....tell 'im you'll get back to him when he has something intelligent
to say. I told Larry that a couple of weeks ago and, except to tell him I
wouldn't be the slightest bit interested in meeting him or most others in
this newsgroup, I've not posted a thing to him since. I just can't find the
"intelligent" part of his posts.

My father was stationed at Ent AFB (now Olympic Training Center) in
1970. His last assignment. He was a Buckeye, but none of the rest of
us were. So when he got out, we moved to Ohio. I went to H.S. here
but left as soon as I could.

Ohio has urban sprawl, high crime, and high taxes, but no one seems to
notice.

Oh, yeh, we're a Republican state.

Gee, what a moron. If the guy was a BoD member at TAPR or something like that, his behavior would be understandable.

After all, he has demonstrated that he lacks the intelligence and social skills necessary to operate on either usenet or ham radio...

Hey, Big Al: Can you give us the latest scoop on what's going on at TAPR? I've noticed that the newsletter is getting really sucky, kind of like the one at TPRS did, right before they went belly-up.

Tell us about it, Big Al!

> And why would the ARS wish to continue to specifically develop radio
> operators capable of using code?

Because the mode offers lots of advantages to radio amateurs.

> What benefit does it offer?

- Narrow bandwidth required
- Can be used with a wide variety of technologies
- Capable of both manual and machine generation and recognition
- excellent weak-signal performance
- QSK (near-duplex operation possible on a simplex channel)
- only popular non-voice "audio" mode (can you work PSK-31 while
driving?)
- usable by many disabled persons

> Not what it
> offers you, but what benefit does it offer to the ARS (here is your
> opportunity to show your position is not just self-serving)?

See above. That's the short list.

> How are the
> goals and purposes of the ARS served by continued skill testing of this one
> operating mode?

Introduces new hams to a mode with the advantages cited, just as
theory testing introduces new hams to radio technology.

> How will this (code skill testing) help to keep the ARS
> abreast of modern technology, insuring our continued value to others?

The mode can be successfully used with equipment of almost any level
of complexity, so that beginners can start off with simple equipment
and work their way up to advanced technologies. And have good
performance all along the path.

> How
> will this help move the ARS into the future (where we should be mainly
> focused)?

By empowering more hams to design and build their own radios.

Dwight, how many hams do you know who have designed and built (from
scratch) entire amateur radio stations? And who use them on a regular

basis - in 2003? (Besides me, that is). I'm not talking kits, either, (my K2 doesn't count) nor accessories, but actual transceivers and such.

Do you think a kid with a sodder arn is gonna build an a 2 meter HT or a PSK-31 station as a first project?

Typical. Hey PUTZ: You are the singular "unifying force" in this
newsgroup. Utter and total disdain and distaste for your personna is
the one "policy" overwhelmingly shared and agreed upon by both the
NCTA and PCTA factions.

Congratulations PUTZ.

and we still have to put up with idiots like you, no matter the band or technology.

besides, if you look at echolink, some of the stations in there are linked to repeaters. believe me, if too many bootleggers show up on echolink, it won't be long before their accounts are terminated and they have some explaining to do (the echolink servers to track IP addresses of those who connect).

as for the technical remark, perhaps you don't realize that a computer is almost an essential part of the station these days (logging, aprs, packet, propogation predictions, etc). so don't gripe at us because of YOUR technical and mental deficiencies.

He does have the habit of trying to twist things when the discussion doesn't go his way and I simply don't have the time for that nonsense. If he doesn't want to discuss the issue seriously, he can discuss it with himself.

All those are reasons for a person to choose to use code, but not reasons for the Amateur Radio Service to continue to specifically develop radio operators capable of using this mode. Understand the difference? One is a choice based on the benefits of a mode while the other is a mandated requirement concerning a specific mode. I'm all for urging people to try Morse Code/CW. But the issue at hand is a specific requirement to do so, which I don't think offers any real benefit to the Amateur Radio Service.

Again, a reason to promote code, but not a reason to mandate it.

>
> By empowering more hams to design and build their own radios.

Electronics can clearly be taught without a code testing requirement. I'm playing around with basic electronics, obviously without those code skills. However, I'm not building a basic CW rig because it has no widespread application in a modern world. I'm repairing an old SSB radio to learn more about it, but that is clearly a minor project at the moment (my intent is to build a simple SSB radio one day). Instead, I'm now mainly focused on microcomputers, interfacing, programming, and robotics. That leaves little time for pounding out messages with a code paddle.

WA8ULX,

Please excuse everyone for being a bit confused by this. When someone pointed out earlier that your birthdate was incorrect, didn't you reply:

>> CBplusser, you dont fill it in QRZ fills it in.

Since then, two people have kindly posted instructions on how to fix it. Now, you are insulting Kim, and telling us that is was you in the first place who changed your birthdate, because its 'cute'.

Had you told us that up front, we probably would have thought so too. Now, I'm not sure what your intent was....to foster confrontation, perhaps? Or are you trying to create a new licence category - Extra Crass :)

Oh, come on, Kim. After passing all those license exams, you can't really expect Bruce to have any room left in that head to think of anything else. As it is, he had to forget all he knew for the previous exams to make room for the information for the later exams. Of course, he also had to forget all about the later exams to make room to remember his name again. And, as you can see, with that, there clearly isn't any room left for basic spelling and grammer.

Horace Ward
President and Chief Executive Officer
(309) 633-6886
horace.ward@rohnnet.com

ROHN INDUSTRIES, INC. FILES FOR CHAPTER 11 PROTECTION;
$9.5 MILLION DEBTOR-IN-POSSESSION FINANCING SECURED;
BOARD MEMBERS RESIGN

PEORIA, IL, September 16, 2003 ï¿½ ROHN Industries, Inc., (OTCBB: ROHN), (the "Company") a provider of infrastructure equipment to the telecommunications industry, announced today that the Company and five of its direct and indirect subsidiaries have filed voluntary petitions for Chapter 11 relief in the United States Bankruptcy Court for the Southern District of Indiana (the "Bankruptcy Court").

The Company also announced that, concurrent with the Chapter 11 filing, it has entered into a $9.5 million debtor-in-possession ("DIP") line of credit with the lenders that are party to the Company's Amended and Restated Credit Agreement, subject to the approval of the Bankruptcy Court, which will include funds that will be rolled forward from the Company's current credit facility. Subject to the provisions of the Bankruptcy Code, the Company remains in possession of its assets and properties, and continues to operate its business. The Company said that the objective of the Chapter 11 proceeding is to maximize recovery to creditors by facilitating an orderly sale of assets. The Company is currently in discussions with an unrelated third party regarding a proposed sale of the assets of the Company.

Upon the filing of the bankruptcy petition of the Company, but following the approval by the Board of Directors of the Chapter 11 filing, Stephen Gorman and Jordan Roderick each have resigned from the Board of Directors of the Company. Currently, Horace Ward, the Chief Executive

Officer of the Company, is the only remaining director of the Company.

Commenting on today's announcement, Mr. Ward said, "Our immediate goal is to stabilize the Company's financial situation and utilize the Chapter 11 process to enable the Company to conduct normal business operations as the Company works to complete a sale transaction."

The Company has retained the Indianapolis law firm of Ice Miller to act as its legal counsel in the bankruptcy proceedings. The Company has also retained Silverman Consulting, a national turnaround consulting firm.

About the Company

The Company is a manufacturer and installer of telecommunications infrastructure equipment for the wireless industry. Its products are used in cellular, PCS, radio and television broadcast markets. The Companyï¿½s products include towers, poles, related accessories and antennae mounts. The Company also provides design and construction services. The Company has a manufacturing location in Frankfort, IN along with offices in Peoria, IL and Mexico City, Mexico.

Statements in this press release include ï¿½forward-looking statementsï¿½ within the meaning of the Securities Exchange Act of 1934, the Private Securities Litigation Reform Act of 1995 and other related laws, and include, but are not limited to, those statements relating to sales and earning expectations, expected demand and other statements of outlook. The Companyï¿½s actual results and effects could differ materially from those currently anticipated in our forward-looking statements. Factors and risks that could cause such differences include, but are not limited to: wireless and fiber optic communications industry capital spending; the ability of the Companyï¿½s customers to secure adequate financing; elections by customers to terminate or delay previously placed orders; the effects of competition, particularly on pricing and margins; the Companyï¿½s implementation of our growth objectives in foreign markets; the Companyï¿½s indebtedness, which could restrict its operations, making it more vulnerable to adverse economic conditions and making it more difficult for us to implement its business strategy; liquidity problems that confront or may confront the Company; the Companyï¿½s inability to obtain bonding required for certain customer contracts or potential contracts; liabilities arising from an engineering problem with the Companyï¿½s internal flange poles and a testing and repair program undertaken by the Company in connection with that problem; unexpected problems and costs the Company may encounter or incur in consolidating our manufacturing operations at its facilities in Frankfort, Indiana; the Companyï¿½s Commonwealth of Pennsylvania construction project staying on its currently anticipated schedule; and regulatory changes affecting the industry in which the Company operates. The cautionary statement contained in Exhibit 99.1 to the Companyï¿½s Form 10-K for the year ended December 31, 2002 is incorporated herein by reference. Forward-looking statements are given as of the date of this release and the Company is

not undertaking any duty or obligation to update these statements
publicly as a result of new information, future events or otherwise.

Points well taken, no arguement from me on them.

Maybe the next commissioner will be on the board of Alabama Power. The
corporation that has taken 5 years (so far) to clean up their trashy noisy
lines.

Can't wait till they try BPL.

No it does not negate a thing Brian. It shows how ill prepared the US
Military was during the height of the Cold War.

The Iron Curtain countries didn't have a problem with good CW operators.
And IM NOT TALKING ABOUT HAM RADIO.

And thats all I can say on that subject.

Dan says that I never admitted to what I did in the past. This post from a few years back shows that I did.

PS: I also apologized to him for my actions!

Doc,

You owe Herb Schoenbohm a thank you for helping put Frank on the
correct path. One day Frank was on 20ssb from Herb's station. I was
on frequency and broke in to say hello to Herb. Herb said would I like
to talk with Franky, I declined. He asked why...and I told him I
didn't appreciate how he treated me on the air without him even having
a callsign (at that time). A short pause later Frank came on the air
and apologized to me. I accepted and from then on have been in contact
with him via e-mail.

As for him talking with you and some of the "others in our camp" ...he
and I discussed it and he made the proper moves..with some minor help
from me.

Frank Todd is a good young man now, and a asset to amateur radio.

fwankie toad will be on tonight, on top of his gay lover's pole. Him
and loid da toid davies are butt buddies.

fwankie is a regular visitor to lloyd's hud apartment, They were
caught by the athens, alabama police a couple of weeks ago. They were
caught in the local pickle park, lloyd said....."we were playing
leapfrog and I got stuck," fwankie couldn't say anything as his mouth
was full of jizz!

Hi Leo, and RAC did their typical job of making sure their CW
agenda has the guise of widespread canadian amateur approval.

Noone I know knew of the survey, and I strongly suspect that
if the majority of canadian amateurs had really been aware of it,
the results would probably have been different.

I have discussed the issue over the years with a number of
directors, and Jim Cummings, and cannot express
my disgust at the way it was handled.

cheers, Paul - VA7NT

Paul,

Fully agreed - I found the survey quite by accident when I was looking up sonething on the RAC web site in August, otherwise I would not have missed it too..

Was it advertised in the magazine? If so, I don'rt recall seeing it!

Hopefully, the ARRL won't try to pull the same stunt....whatever way the vote goes, it should fairly represent the wishes of the Amateur community, not a small (and perhaps biased??) sampling.

>Do me a favor, John, and tell that to K2RSK next time you see him!

Uh, time out, Larry.

Take another look at what was quoted, Larry. It does not say, "Nobody
uses CW anymore." What it says is, "Nobody ELSE uses CW anymore."

There is no longer any use of CW in U.S. commercial, government, or
military radio communications. In the maritime HF bands you'll still
find some individual radio ops chit-chatting on the ship-to-ship
simplex frequencies using CW, but that's the extent of it. CW is no
longer used for passing message traffioc ship-to-ship and is no longer
used to communicate with the shore stations (which abandoned CW three
years ago, a fact that was well-publicized in the radio magazines and
on the Internet discussion groups).

I will assume this is an honest mistake on your part and that even you
aren't so low as to stoop to deliberately overlooking the word "else"
in what I posted. The amateur radio service is the only radio service
left where CW is used by any significant percentage of the operators.
You should know that as well as the rest of us do, right?

Now, back to our regularly scheduled discussion, already in progress:

>>Valuable? In some respects, perhaps. It does have its advantages,
>>although it also has its disadvantages.
>
>Whaaaaat? I thought you just said "...nobody uses CW anymore."

That's what you get for thinking instead of reading what was actually
posted, I guess. Put your bloody glasses on and try again!

>Well, anyway, please enumerate all the "disadvantages" of the
>Morse/CW mode.

1. Use of this mode requires that the operator at the other end of the circuit can copy code. Half the hams licensed in the U.S. are at Technician. Many hams licensed at General and Extra learned the code well enough to pass Element 1 and want nothing more to do with it. Even hams who passed code tests at higher speeds no longer use it. Even if they did pass the test, chances are they haven't used it on the air (probably never had any intention of doing so, since all they wanted to do was pass the stupid test so they could upgrade and gain the privileges they were really interested in), so they probably can't even zero-beat to your signal. There's no guarantee of finding an op at the other end with any proficiency in copying the code, especially at any significant speed, which means that even if you do find a ham who went through the testing procedures recently enough to still remember the alphabet, you're going to have to send pretty slowly in order for what you send to be copied, which means that...

2. You can get the same message through faster using another mode. At 5wpm (which is the fastest code speed that any US-licensed ham is required to be able to copy), in the time it takes to send a 2x3 callsign in CW, you can send a couple of whole sentences on phone.

For that matter, in sixty seconds at 5 WPM, you can send 12 words. You can also send an entire picture in SSTV in sixty seconds - and, as we all know, one picture is worth a thousand words. :-)

3. Because of the narrow bandwidth of a CW signal, CW ops tend to operate rather close together, requiring an optional filter for most rigs to be able to zero in on one and only one signal. The same rig out of the box will have a much easier time zeroing in on one and only one phone signal - assuming that ops observe the courtesy of keeping 7kc or so between themselves and the nearest frequency in use.

4. I'm aware of at least one rig that's been manufactured over the past ten years or so that doesn't even *have* the CW mode. RadioShack, one of your former employers, sold a 10m rig like this. For all I know, there are others as well. Hard to work somebody in CW when their rig doesn't have that capability, wouldn't you say?

Want me to continue?

>>Basic? I'm not too sure of that. It was once upon a time. I'm inclined
>>to think that time is either passed, or very close to it. I don't know
>>what percentage of hams is sufficiently skilled with the mode to
>>actually use it for on-air contacts, but surely the percentage must be
>>shrinking daily.
>
>And just exactly what do you think is causing that, John?

What, reading comprehension problem, Larry? :-)

Obviously, it's because there is a growing percentage of hams who are not interested in using a method of communication that was originally conceived over 150 years ago, and descended from a method of sending messages over hardwired telegraph lines.

>>As for the code testing requirement being essential to the continued

Fine! But a full recovery still involves getting the patient off that
life-support system, doesn't it.

You pretty much got my point, Dwight. It's human nature to resist what
gets forced on us. Personality traits differ from one individual to
the next, of course, but generally, I think it is safe to conclude
that the majority of people prefer to choose their own recreational
activities rather than having them mandated by governmental decree or
regulation. I'm certainly among those in that majority.

>Morse Code/CW. But the issue at hand is a specific requirement to do so,
>which I don't think offers any real benefit to the Amateur Radio Service.

There's the rub, Dwight. Notice how the PCTAs refuse to see the
distinction between the two? I think there's a reason for that. They
know that the majority of hams is going to want nothing to do with the
code if the testing requirement is abolished . The majority of hams
NOW wants nothing to do with it, and we haven't even gotten the
testing requirement out of the regulations yet.

I think the PCTAs know darn well that if the test goes, they're going
to have fewer and fewer people to beep with as time goes on. They
accuse the NCTAs - and hams who aren't interested in CW - of being
lazy, when in fact, it's the PCTAs who are too lazy to promote their
own favored activity within the hobby, and therefore need a government
regulation to shove it down people's throats for them instead.

I think they also realize that as fewer and fewer hams use CW, there
will be less of a need for subbands, and they will stand to lose turf
if and when the frequencies are refarmed...and I really think that
this is their greatest fear: that subbands will be taken out of the
regulations and put back into the hands of hams, where the issue
belongs anyway. Do we really need regulations of that nature? I don't
believe that we do. CW is already authorized on any frequency where a
ham's license permits him/her to operate. There are no FCC-mandated
subbands on 160, and that band hasn't exactly turned into a mess
without such regulations.

The code isn't the primary issue with many of the PCTAs - it's simply
a turf war, with the code test issue being used to obfuscate their
real agenda.

> Electronics can clearly be taught without a code testing requirement. I'm
>playing around with basic electronics, obviously without those code skills.

It occurs to me that, absent a code testing requirement, there's a
good possibility that the technical qualifications of the ham

community will go up, because any time that would have been spent learning the code (under the old system) can now be spent learning something about digital electronics - or some other topic that has real-world application outside of the ARS.

>However, I'm not building a basic CW rig because it has no widespread
>application in a modern world.

This is something the PCTAs refuse to accept, Dwight.

When's the last time a state-of-the-art communications system was designed that was based on the use of telegraphy?

Today's modern communications system are designed around digital applications, and in fact an emphasis lately is on automated operation. Even within the ARS, the standard for automated store-and-forward transmission of messages and data is AX25, not CW.

>I'm repairing an old SSB radio to learn more
>about it, but that is clearly a minor project at the moment (my intent is to
>build a simple SSB radio one day). Instead, I'm now mainly focused on
>microcomputers, interfacing, programming, and robotics. That leaves little
>time for pounding out messages with a code paddle.

I find it interesting to note that the holder of a Novice license, who passed one and only one written test (prior to April 2000, when they stopped issuing new Novice licenses, this was Element 2), has HF phone privileges on ten meters. A Technician who took his tests on the same day had to pass elements 2 AND 3a, and has no HF privileges at all, unless he/she passes a CODE test - the results of which tell us nothing at all about that person's qualifications to operate a PHONE station on HF (or anywhere else for that matter).

Looking at it from the other side of the glass, the Novice is considered qualified, on the basis of having passed a code test and the easiest written test in existence at the time, to operate HF Phone on ten meters - which when the band is open propagates even a signal well below the 200 watts authorized to a Novice - on a worldwide basis. But the same Novice who is considered qualified to work the world on 10 meters, cannot work the guy down the street on the local 2m repeater because Novices have no 2m privileges.

Back to the Technician - based on that one written test (post-April 2000 Element 2), he/she is permitted to use any mode authorized to any other U.S. licensed ham, be it a General, an Advanced, or an Extra. But until that person passes a code test, he/she can only use those modes on VHF/UHF. Which means that the Tech can run 9600 baud packet on 440 with the bandwidth that comes with using that higher symbol rate, yet he/she is not qualified to use 300 baud packet (with a much narrower bandwidth) on 10 meters unless he/she passes a test pertaining to a mode (CW) that has nothing at all to do with operating packet on any frequency.

Now, what does the fact that these facts make perfect sense ONLY to
the PCTAs tell you about the PCTAs?

Makes you wonder what drives some of these folks to behave the way
they do.....and in some cases (like today's example, posting obscene
crap from an DoD network), pretty stupid.

Guess these guys aren't too Internet literate - nym-shifting might
fool some of the Usenet community, but the ISP's server logs don't
lie!

Now, if Supernews would be so kind as to TOS this 'Big Al' character,
we could get back to dealing with the usual level of nutbar that lurks
here :)

>Perhaps Len could shed some light on this.

I could, but it is like trying to teach pigs to fly...it annoys the pig and the instructor. Nonetheless, I clean off the whiteboard and explain:

In the 1950s-1960s, morse code skills were taught to FIELD RADIO MOS school students...but at (then named) Camp Gordon (now Fort Gordon, GA). "Field" radios in the US Army then ranged from the old WW2-era AN/GRC-9 two-man-pack portable to the AN/GRC-26 truck-mounted hut containing an HF-range AM/CW/RTTY station (BC-610 transmitter) and having the masts and wires for a small rhombic.

"Angry-twentysixes" were deployed in Korea during the active war period there (1950-1953) but the overwhelming mode of choice for field communications was RTTY, not morse. The GRC-26 could transmit RTTY and voice simultaneously. NVIS had not become a standard acronym yet. Despite the hilly topology of Korean landscape, VHF radio relay sets had become the "favorite" (most-used) method of radio communication of any kind there. Such VHF radio relay carried voice and TTY circuits, again the TTY preferred over manual morse code.

In the next decade, moving to southeast asia, the AN/TRC-24 (among several) was the most used radio relay equipment, again carrying voice and TTY. The '24 was easily spotted by the curious square antenna configuration that worked from 40 to 400 MHz and could integrate with Spiral-4 land cable having up to four in-line repeater amplifiers along that cable. An integrated solution to networking at higher command levels.

In the 1950s in Korea, the small-unit radio most used at first was the BC-1000 "Walkie-Talkie" designed by Motorola in WW2. The AN/PRC-6 HT was next for easy squad use, on VHF and with the built-in facility for active repeater operations. About 1952 late, the "three-band PRC-9" family of manpacks replaced the SCR-300/BC-1000s, having less than half the weight. Those extended into vehicle-mounted versions of the manpack and were initially planned as three overlapping bands in VHF intended for Artillery-Infantry-Armor units, each of those having a band. All of the "9s" family had provisions for unattended repeater operation.

For Vietnam, Laos, and Cambodia all of the mentioned VOICE radios were used plus the appearance of the almost-all-solid-state PRC-25 multi-channel synthesized portable VHF FM set (only the final amplifier was a tube stage). By 1970 or so, the AN/PRC-77 appeared which was essentially the same architecture but having all solid-state circuitry. An eighth of a million models of the '25 and '77 were produced during a decade and a half of production in several countries.

The original SCR-300/BC-1000 "walkie-talkie" was licensed for manufacture in many countries, including the UK (there known as WS-11?). The improved "9s" of the late Korean War vintage were also licensed out to other countries. Motorola's Chicago works was the pioneer in the design, beginning before WW2 (original "handie-talkie") and into the architecture of the 1950s-introduced manpacks.

US military aviation pioneered the UHF "military aircraft band" of 225-400 MHz beginning in the 1950s, notably the Collins Radio design which was channelized and had AM voice...some were still on inventory as of 1970. The SINGLE CHANNEL SSB (single user) was pioneered again by Collins Radio for the Strategic Air Command in the 1950s, the ignition point for the adoption of single-user SSB by radio amateurs.

While several HF range portable and transportable communications transceivers were in use from 1950 through 1990, all with carrier on-off control and having manual telegraph keys as part of their system, the modes of actual use were still voice. Carrier on-off control was largely restricted to semi-remote site operation from a wire-linked control point (some protection of personnel from enemy DFing and bombing of RF emitters). Various forms of voice encryption and data machine coupling appeared then.

The first of the SINCGARS family of VHF small-unit communications sets appeared in 1989. Design was led by ITT Fort Wayne, IN, and allowed both frequency-hopping and external encryption devices to defeat enemy interception. That series continues in production today with the manpack version reduced to half the bulk and weight and including internal encryption
circuitry for both voice and data. A standard US military land and air set for manpack, vehicular, or airborne use, a quarter million has been produced by ITT and the former General Dynamics Land Division in Florida.

Army land communications includes a large number of different radio relay sets (troposcatter included in my definition of that) and whole voice-data telephone exchanges, all mobile and truck mounted, deployable anywhere and capable of supplying all the needs of military communications at any level from Corps on down. The Signal Center at Fort Gordon is now the main Signal School for the US Army and other branches. Fort Monmouth is now the home of the Electronics Command, USA, and is a center for coordinating manufacturing and research in Army military communications.

The Military Intelligence Center at Fort Huachuca, AZ, has the only "code school" left (morse code cognition) and that Center trains ALL branch members and necessary government employees on various Military

Intelligence tasks. Morse code cognition is taught using commercial morse code computer programs. Such cognition schooling is only a PART of the overall M.I. electronic intelligence intercept task. A much larger activity there is the UAV (Unmanned Aerial Vehicle) training.

The old mythology of "special forces behind enemy lines reporting back intel via CW" has never surfaced in any history since the 1960s. During the first Gulf War, the "behind the lines" radios were basically the AN/PSC-2 which is low UHF, has three antenna choices (the largest is a satellite "umbrella") and was designed to handle voice and data, data to 1200 BPS using a small "chiclet" style keyboard. The deployable AN/PSC-5 is now operational with more improvements. USAF "Joint Stars" command aircraft can easily relay PSC radio comm to other sites and the directional UHF antennas defeat most field DF operations.

In the US military, HF radio use is largely considered to be just a backup mode of communications. The primary medium for communications is land radio relay, satellete relay, and small unit radio netting at VHF and higher. At fixed bases, land communications is connected to the DSN which is considered as the "government's own Internet" that handles voice and data digitally and includes encryption for both (if authorized).

There is NO morse code mode used for any tactical radio communications anywhere in today's military. There is no evidence that strategic comm (such as by Special Forces, SEALS, etc) uses any morse code modes; their known equipment characteristics concern only voice and data modes.

It's not possible to tell/explain what happens in "code classes" when there are none today...

How do YOU "know" this, DICK?

You never went to Field Radio MOS School at Ft. Monmouth (it was at
Fort Gordon, GA).

Field Radio School at Gordon had washouts and there were re-
assignments. In the United States Army.

After the first few ignored posts, it's fun.

Ah-nold the Codinator is apparently skinless.

A long time ago I explained facts, and gave a website address for the only remaining morse code test center in the US military, Fort Huachuca. That was in public view.

Arnie insisted I had refused to believe "his" statement of it. Apparently he thought MY posting was his.

He kept hammering in public that I should make a telephone call to some NCO back east to "learn all about a code test" that was required of one Special Forces MOS rating. All of that MOS information on any job description in the US Army is given ON their website...every single MOS rating. For public viewing.

Arnie kept trying to convince everyone that morse code is used today for US military communications. It is not. It's "use" is only for Military Intelligence electronic interception (Ft. Huachuca is an M.I. center). There is NO US military tactical communications done today by morse code and NO evidence that it IS used for that. I gave several web addresses for information, including the US Army's Doctrine and Training Command Digital Library and repeated mention of FM 24-24, the 1994 Field Manual listing ALL land forces signal equipment (which is linked-to by at least three amateur radio websites).

All of that was at a time when Arnie claimed to be employed by the US Army as a civilian criminal investigator.

As a direct employee of the US Army, Arnie would have had easy access to all PUBLIC release documents of the US Army.

I recommended (at the time) that Arnie visit any US Army field communications exercise to investigate the actual USE of morse code in field communications. Arnie ignored that. He preferred to "plonk" me in some "killfile" claiming some personal disatisfaction at not being "nice" to him.

So...the gist of it is that wearing blinders to the real world can cause not only physical but mental problems of cognition. Some "investigator." NOT.

If the US Army ever did hire him as a criminal investigator, I'm glad (for that branch of the military) that he does NOT "investigate" for them now.

That's really not the point. I think both of you realize this. :-)

Roll's constant repetitions of old Maxims in here and the few personal barbs he throws in are just his way of trolling for those to respond to in the newsgroup. He seems to live by such "responses" which are little more than cut and paste from five years ago.

Roll has a very strong sense of self...and considerable self-promotion (in any other place it would be called "ego").

A good example of that is his self-promotion as a paragon of ethical and moral worth of self-discipline and "motivation" on upgrading via 20 WPM and achieving an extra class license. He loves rebuilding that marble pedestal to stand on. It is as if all US radio amateurs should emulate his self-admitted wonderfulness as the role model for all others.

None of it is a REAL argument for morsemanship. It is just self-praise.

Roll's basic arguments for the morse code test are just a very long-winded version of "I had to do it so you have to do it!" Probably with a good dose of "I'm so wonderful you should all be as good as me..."

:-)

It's "sequitur." :-)

Tsk, tsk, tsk..."tangents?" I was handling sines, cosines, and tangents back in high school of 1950. Trigonometry not a problem...always got maximum marks in such subjects.

>Most of us have long ago
>killfiled him because of it though there are a couple of people who continue
>to wrangle with him.

Translation: "I think he is horrid for not expressing 'our' True Belief in the sanctity, nobility, and righteousness of morse code!"

>I never see his posts anymore.

That does not matter to the rest, does it? :-)

If you want to retreat into some magic fantasyland, by all means shut out all discourse on subjects which go against your opinions.

Wearing blinders and doing the ostrich thing is denial, and rather egotistically arrogant in such subjectivity.

Those with the courage of their convictions should not be afraid to speak out. You apparently cannot handle any rational discourse, therefore you try to assassinate another's character instead of standing up for your Beliefs.

A problem with imitating the ostrich is that it leaves the rest of you hanging out for all to see.

Let's see..."strong words" like "PUTZ!" for example (a nice little Yiddish
epithet for "dickhead").

"Strong words" like "you are ignorant, don't know anything!"

"Strong words" like implying all those opposed to the writer's opinion
is a child.

Then there's the "strong IMPLICATION" that someone "always" says
something to ruffle another's feathers. Tsk, tsk, tsk.

Michael, as a moderator, you DO have a serious problem at times with
hypocrisy.

Good luck on this one now...

Oh, they just overlook what they and thier those on thier side of the fence say. ALL that is okay, and goes without the same scrutiny that they give the rest of us. Yes, stereotypical hypocrisy.

Add to the list of names and phrases you gave the following... "jerk", "moron" and "dumb fuck".

What I REALLY like are the posts where I was called one of the aforementioned insults and then the letter was actually (I kid you not) ended with an accusation of name calling and personal character attacks! LOL

My point exactly; you described my thoughts to a word.
I just wonder what those hams out there that haven't made up thier
mind on the matter yet think when they read how the people on
THAT side of the issue behave? Denial & hypocrisy interspersed
with social outlooks that are as static as an oil painting. Yea, that's a
REAL good way to attract support for a controversial issue, isn't it?

Generally those on sinking ships look for lifeboats and lifevests
instead of trying to see what the quickest route to the bottom of
the ocean is.

Imagine a televised debate on a matter, say a political one, where you
have candidates behind either a table they're sitting at or a podium they
are standing behind.. The first candidate begans to spew out all his
ideas and what he wants to see happen and what he'd do if his
side of the issue one, and then when the other candidate stepped up
for his or her retort, the first candidate just stuck his fingers in his
ears,
rocked his head back and forth and looked up and the ceiling and
started humming loudly to himself so he couldn't see or hear anything
from the other side. Now, he doesn't know what the other side
said, and probably doesn't care....

but the important matter is THIS.. what do all the voters in the
audience think of that fellow????

makes you want to rub your chin and go "hmmmmmmmm...."

> reading comprehension, my friend.
>

and if you'll read one of my other posts I made to this very stand
you are trying to take, you'll find that nobody buys that as you
have shown a one-sided support in this issue, including your
very hypocritical scrutinizing of what the NCTA'ers have been
saying (grammer and content wise) while NOT holding the
PCTA crowd's feet to the fire. This means if you aren't
a supporter of them, your at least an apologist. OR there IS
a third possiblity; you are a personal friend to one of them
and have been communicating on the side, and he or she has
asked you to jump in here and appear as a "non-commited"
so as to give the air of being ambivalent or indifferent to the
matter at hand.

No, it's not a matter of my comprehension being poor; it's
RIGHT on the mark. In fact, i'd say that I hit the nail square
on the head, Leo. There can be NO other reason why you
have chastized certain things I have said but given those
of the PCTA that have called names and used
personal attacks.

You're just not that clever.

>
> 73, Leo

Given that:

1) the ARRL's membership represents <25% of US licensees

and

2) that the membership is HEAVILY stacked with long-time
hams (Techs have stayed away in droves - in my view because
they correctly have viewd ARRL's Morse policy as designed
to keep them off of HF)

I would, even giving the ARRL credit for the best of intentions,
submit that any survey of ARRL membership is unlikely to be
TRULY representative of the views of the majority of US hams.

And i'm telling you, guy, you can BET on this.... he's just a friend of some
sort
to one of the PCTA's who has asked him to jump in here on thier behalf and
appear as hypothetical observer. I've seen this tactic before. You have to
consider how hypocritical HE is (attacking our syntax and grammer, while
not saying a THING about the PCTA group's choice of words or
grammer).

But that's just fine. I don't mind debating with him either, it's even
EASIER
to beat for this reason because his heart and mind aren't really into it...
and if he ISN'T a ham, then it'll show through eventually but i'd hazard the
guess that long before it gets to that point you'll mysteriously see him
vanish.

5391. Re: wanna talk SHUDDER?

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-25 00:09:28 UTC
From: Leo <nomail@nope.org>
Message-ID: <hp44nv0686rruin67v0hhamck44hc4epbp@4ax.com>
Source record: 78810

It's a pity.

Poor, sad old man. Blasting off random bursts at his 'enemies' on the newsgroup. Perhaps a bout of 1950s-comms-induced PTSD awakened him from his restless, fitful nap late this afternoon. It is indeed heartbreaking to see the ravages of time on someone who was probably so vital and important in their youth. A real tragedy. Firing off 28 postings in a row, in a valiant effort to smite his those who refuse to cowtow. Fighting in the blind. The last vanguard against the sullied and ignorant opinions of the unwashed masses of rec.radio.amateur.policy, and other important theatres of combat. The pathfinder for the hopelessly dinky-dow. Dudley Do-Right, trying to save his Nell.

Still swinging at ghosts. PTSD - induced firefights in the newsgroup. Endless torment - always in danger of having his newsgroup position overrun. "Incoming !!! Incoming !!! Stand by - returning Usenet message fire !!! Budda-Budda-Budda-Budda !!!!!. Can't get 'em all, though - too many incoming messages - Can't read 'em all...they're too long !!!!!. Ambush !!!! - We've got Hams in the wire !!. Pick your targets, Men, Just hit the ones you can easily kill ! FOLLOW ME ! AIIIIIIEEEEEEE !!!!"

Frustrated. Still unable to score a hit. One shot, no kill. A hundred shots, still no kill. Oh, what would he give for a victory? - the sweet taste of conquest! What would he give to make them listen - to understand? "WHY won't they LISTEN?????????"

And lastly, the big one. Tarnishing one's honor in meaningless online arguments, in the hope that someone somewhere out there will agree. Or submit. Or convert to his way of thinking. To see things from his perspective. To comprehend his point, however small, as it is important to him! "To just DO WHAT I SAY!!!!!!!!!!"

Still searching for the right words to make himself understood. But, the right words fail him. And, tragically, losing his perception of reality, and believing that, if it doesn't have a name, it cannot be real. If you can't see it, it isn't there. Imperceptible. Not tangible. Not defeatable. Kicking a** and taking names - that's what young soldiers do, isn't it? - . But the old, the infirm, the surplus, the forgotten, and those looking at the last few miles (nay, perhaps yards) of life's long road - what is reality for them? Is it only what can be touched? Or seen? Or dominated? Or attacked? Or convinced? Oh, sweet reality - what are you, really? "WHAT IS YOUR NAME ???????? WHO ARE YOU ?????????"

And, inevitably, the question of honor - possibly the most enduring trait that defines a man, and the last one to be bartered for the short-lived rush of Usenet group acceptance. The last one to be cast off in the pursuit of newsgroup gratification. The final frontier. Down to the last dollar. Craps, you lose.

For the best contemporary definition of honor, we need only look to a famous military organization that best personifies that word:

"Honor guides Marines to exemplify the ultimate in ethical and moral behavior; to never lie cheat or steal; to abide by an uncompromising code of integrity; respect human dignity; and respect others. The quality of maturity, dedication, trust and dependability commit Marines to act responsibly; to be accountable for their actions; to fulfill their obligations; and to hold others accountable for their actions. "

But this is far too harsh a standard in our modern-day civilian world. We as a society give latitude, however, to the older members of our group. Sometimes, they lie. Not intentionally - I'm certain that they honestly believe they are reciting fact from memory, a memory that is now growing fragile and occasionally fuzzy and distorted. And sometimes, they become impatient and forget to respect human dignity (after all, society owes them a debt of gratitude for the contributions of a lifetime!, doesn't it? Of course we do!). Or to accord others the respect and dignity that they deserve. And, ironically, the older folks tend to hold others accountable for their actions, to a level that mainstream society is often uncomfortable with. Even when doing do is in violation of the rules of polite society.

But, this is not an affliction. Or a disease. Or the slightest bit unnatural. It is simply the logical, natural progression of life as God intended it to be - perhaps cruel, but it is a road that we all must travel someday. No way out!

So, Stand Down, Old Soldier - we understand! We appreciate everything that you have done for us, and we will make it our goal to make your twilight years comfortable. And happy. And fulfilling. No matter what. If you cannot always see your way clear to respecting others, or keep the old facts straight from time to time, that's OK. We understand!

We're here to help you to be all that you can possibly be, OM - if you will just let us!

Two things in life of of paramount importance right now. People to depend on. And Depends. You will never run out of either, not as long as we are here!!!!!

73 and 88, OM Leo

PS - I'm sure other folks on the newsgroup will check in with you from time to time, and make sure that you're OK. There's nothing like

reassurance to get the elderly through frightening and frustrating
times. Constant reassurance - its the only way!

160 meters will never be a problem. Very, very few amateurs have the room
to put up an effective 160meter antenna.

OK print the demographic DATA that shows that the ARRL membership is deficient in Technician class licenses. Right now you are presenting an unsupported opinion. The policy was never designed to keep them off HF. The policy was intended to require what the membership believed to be a valuable communications tool. Based on the Techs I know, just as many (or just as few) join the ARRL as is typical of holders of other license classes.

When you codebashers gonna make up your minds?? the earlier story was that techn just didn't care about HF. Must've been a few out there who did obviously, but you're scheme just doesn't square with the attitude of most Techs who only wanted VHF, (a great many of whom dropped out and didn't renew when all the family got cellphones).

Just like someone who posts here under several different AOL screen names, such as "nocwtest", "averyfine", "averyfineman", "lenof21", "lenover21", and probably some more I've forgotten.

It's also interesting that when "vshah101" showed up here and posted "anonymously", Len had no problem with him at all.

Ah, the old ad-hominem. You attack the person, not the issue. Vshah101 is against the code test, so it was OK with Len if he posted "anonymously".

Sure he does. He's "Leo".

Oh wait, now I get it. You are angry because you don't know things about him like his last name, his callsign, his job, his age, his military service, etc.

You can't use any of those things against him.

>>Now stop debating, Clint - for God's sake, you'll go blind :)

5398. FCC endorses BPL, another threat to ham radio

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-25 00:31:17 UTC
From: opcom <eccm@swbell.net>
Message-ID: <3F72521A.70F5BD12@swbell.net>
Source record: 78817
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.policy,rec.radio.shortwave

This was posted to ARLI, I don't know how many subscribe, but in spite of the numerous comments against BPL (transmitting wideband internet data over power lines, which will destroy the HF radio spectrum), the FCC seems disposed
to encourage it anyway. evil! evil! just look up BPL on the web. The noise from the radiated signals trashed the ham bands thoroughly.

Amateur Radio Station N0JAA <N0JAA@aol.com>
4:00 PM

Subject:
[ARLI] FCC Commissioner's Comments Concerning BPL
To:
bvarc@clarc.org, clarc@clarc.org, ARLI@topica.com

The following is a transcript from a recent speech given by FCC Commissioner Kathleen Q. Abernathy at the United PowerLine
Council's annual conference regarding BPL. It seems that she is all for it. It also seems that BPL is going to become a reality, regardless
of what ARRL, the military, or anyone else says. As usual, big industry wins over everyone else because they have the money.

This is from today's FCC Digest.

Paul, N0JAA

Reaching Broadband Nirvana
United PowerLine Council Annual Conference Remarks of Commissioner Kathleen Q. Abernathy
September 22, 2003 (As prepared for delivery)

Thank you very much for inviting me to speak with you. I am very excited about broadband-over-powerline technology. I
have seen it in action, and I believe it has a very bright future. It is a real honor to be your keynote speaker at this
important juncture for BPL.

As a regulator, I am keenly interested in BPL technology for a number of reasons. One of my central objectives as an FCC commissioner is to facilitate the deployment of broadband services to all Americans. I also fundamentally
believe that the FCC can best promote consumer welfare by relying on market forces, rather than heavy-handed regulation. The development of BPL networks will serve both of these key goals. It will not only bring broadband to

previously unserved communities, but the introduction of a new broadband pipeline into the home will foster the kind of competitive marketplace that will eventually enable the Commission to let go of the regulatory reins. I
want consumers to have a choice of multiple, facilities-based providers, including not only cable and DSL, but also powerline, wireless, and satellite services. Such a robustly competitive and diversified marketplace is
something I would call broadband Nirvana. We will not get there overnight, but the continuing development of BPL technology is a major step forward.

While the long-term objective is a robustly competitive marketplace that is free of regulatory distortions, a more immediate question is: What should the FCC do to help foster such an environment? Sticking with my Nirvana
metaphor, I guess the question would be, what is the path to enlightenment?

I believe the answer, in short, is regulatory restraint. It is tempting for regulators to take every new technology or service that comes along and apply the same rules that govern incumbent services. After all, regulatory
parity and a level playing field are intuitively appealing concepts. But I believe that it would be a huge mistake to carry forward legacy regulations whenever new technology platforms are established. Many of our regulations
are premised on the absence of competition, and when that rationale is eroded, we must not reflexively hold on to regulations that no longer serve their intended purpose. In fact, many of our old rules not only become
unnecessary as markets evolve, but they can be fatal to new services that need room to breathe.

The Nascent Services Doctrine applying more stringent regulations to wireline providers at a minimum must be reconsidered. As other platforms, including BPL and wireless, become more widely available, that will further
undermine the justification for regulating incumbent LECs broadband services as if they were the only available offerings. When the Commission completes this rulemaking, I expect that we will eliminate many existing rules and
substantially modify others; the central question is the degree of regulation that will remain during the transition to a more robustly competitive market.

Finally, it is important to recognize that although the emergence of new platforms like BPL will eliminate the need for many competition-related regulations, other types of regulation may well remain necessary. For example, the
FCC must implement public policy goals unrelated to competition, or even at odds with competition. Universal service and access for persons with disabilities are examples of this kind of regulation. These public policy goals
generally should be applied to all service providers, to the extent permitted by the Communications Act. The FCC also must intervene to prevent competitors from imposing externalities on one another and to protect consumers
where market failures are identified. Although, as I have noted, the Commission was right to refrain from imposing heavy-handed price and service-quality regulations on PCS services when the were introduced, it was also right
to adopt strict interference rules to prevent competitors from externalizing their costs. The same principle will apply to BPL. They key point is that, while some degree of regulation is both inevitable and desirable, we
should ensure that it is narrowly tailored to the particular governmental interests at

stake. I appreciate the opportunity to share these thoughts with you, and I would be happy to answer a few questions if we have time.

Actually you can. One that I found worked quite well on 160 was the
Alpha-Delta DX-A Sloper, actually a double sloper, which also works well
on 80 and 40.

A full size 1/2 wave dipole is of course another matter at ~250 feet.

Ah but how "well" is well. And keep in mind that there are a fair number
who can't manage anything decent on 80 or even 40. I had a nice long,
random wire (about 250') but could only get it about 10 feet off the ground.
While I was able to work stations in Kansas during the 160 meter contest, I
could get California. Yet I heard East Coast stations who were working
those West Coasters that I couldn't hear.

Dee,

As well, consider that the RAC does not represent anywhere near all of the Canadian amateurs. Their survey was, in all fairness, an open poll available to members and non-members alike.

Just one problem, though - they did not publicise it well (or at all...), which limited the votes to those who knew of it or stumbled upon it - and as Paul pointed out earlier today, this has led to the suspicion that the deck may have been stacked by RAC's leadership.

From: Dick Carroll <dixie@NOSPAM.townsqr.com>
Message-ID: <bktfft$71a$0@208.206.142.103>
Source record: 78831
Cross-posted to:
alt.ham-radio.hf,rec.radio.amateur.policy,rec.radio.amateur.boatanchors,alt.ham-radio.packet,rec.radio.amateur.dx

It won't be just hams and other minor users of spectrum below 80 mHz
who will be very seriously impacted by BPL. There are several states
whose statewice Public Service - State Police FM radio communications
systems are located on Low Band VHF, in the 40-50 mHz region. These
include California Highway Patrol and Missouri Highway Patrol, and at
least a few other state public safety and forestry organizations, as
well as many private users.
From personal knowledge of conditions drawn from many years of
personal involvment with these systems I am certain they cannot co-exist
with BPL.

I know they would all jump at the chance to move up to a trunked UHF
or higher system, but with all the state governmental budget woes that
won't be possible anytime soon.
One can only wonder what FCC is thinking here.
BPL is basically a noise generator that is attractive because it
"wires the world" in the eyes of those for whom that end is
the most important feature of advancing technology. Unfamiliar with
the workings of radio or technology itself, they have eagerly latched
onto the totally inaccurate and selfserving assertions of BPL proponants.

As I said in my comments to the NPRM, there are much better ways to
acoomplish the same end without completely ruining the HF spectrum.

Dick

PRAY FOR THE SOULS OF THE FRENCH

"say it isn't so!" ..... The french proposal going
to the United Nations pertaining to the iraqi
situation is to ask for a RETURN of
the baathist part. OH yes, you read that right...
The party responsible for gassing tens of
thousands of it's own people, defying
international laws, pileing bodies in mass
graves as an aftermath of it's bloody internal
policies and many other crimes against
humanity, is going to have a cheerleader
from the country who benifited from it's oil
contracts WITH the baathist party (go
figure!)...And, finally, the french want ALL
mention of liberation taken out of ALL
paperwork and replaced with the word
"occupation", due to the fact that they do
not like its positive connotation. This from
a country that occupied Algeria for 132 years.

Len,

Inspired by your post, I looked up the "Courage of conviction" that
you mentioned below. The only reference that I could find was on
Amazon.com:

Courage of Conviction: Women's Words, Women's Wisdom
By Linda A. Perry, Patricia Geist
Paperback / April 1997 / 1559347163
Books Similar to Courage of Conviction: Women's Word...
Compare Prices Book Details

Instead of buying one, can I borrow your copy when you are done with
it? I need to discover what these women had to say - seems to have
made an impact on you.

Korea, Japan...

We didn't need to send OUR traffic via CW, we needed to copy THEIR
message traffic using CW.

> The Iron Curtain countries didn't have a problem with good CW operators.
> And IM NOT TALKING ABOUT HAM RADIO.

See above.

> And thats all I can say on that subject.

Aw, c'mon.

Imagine a televised debate on a matter, say a political one, where you have candidates behind either a table they're sitting at or a podium they are standing behind.. The first candidate begans to spew out all his ideas and what he wants to see happen and what he'd do if his side of the issue one, and then when the other candidate stepped up for his or her retort, the first candidate just stuck his fingers in his ears, rocked his head back and forth and looked up and the ceiling and started humming loudly to himself so he couldn't see or hear anything from the other side. Now, he doesn't know what the other side said, and probably doesn't care...

but the important matter is THIS.. what do all the voters in the audience think of that fellow???? makes you want to rub your chin and go "hmmmmmmmm...."

Imagine the same debate where the first candidate makes no points on topic whatever, lies about the qualifications and personal history of the other candidate, and injects a string of personal insults as part of his off-topic diatribe. The audience just sits there looking at each other because they know that extremely rude person has just blatantly lied to them. I wonder how many votes that first candidate would get?

Brian,

You know that for a fact, do you?

Fact is, when I used to use a real name and email address on Usenet, I received buckets of spam email and personal rants from every crazy on the planet in my inbox. As such, I don't do that anymore - too much maintenance. Too many nutbars.

My QTH in Ontario, Canada, and my callsign is a VE3 one. I don't use it anywhere off the air for the same reason. On air, it's mandatory - but the groups tend to be smaller and more - um - congenial. And, anyone can surf these groups for info anytime - I'm particular who I give that info out to. Sure, anyone with a radio can hear your call and look you up - but these internet groups have a HUGE audience - and are archived forever (check Google Groups!)

The only reason for providing an address is so that people know where to write back to you - anyone who wishes to communicate with me can find me pretty easily - I'm right here, in this newsgroup.

Like it or not, that's the way it is.

73, Leo

Address your enquiries to 'Leo" - that's my name!

BPL, however, will not only emit a lot of radiated trash into the HF bands,
it will also RECEIVE a lot of radiated trash from the HF bands.

My suspicion is that a fairly low power HF transmitter near a transmission
line, even well out of the near field of the line, will wreak havoc with
BPL communication while operating well below the legal limit.

> As I said in my comments to the NPRM, there are much better ways to
>acoomplish the same end without completely ruining the HF spectrum.

As if the HF spectrum is not already ruined. Doesn't ANYONE take Part 15
seriously? If I ran the FCC, I'd make touch lamps illegal for one thing.

The FCC may be listening to "college boy" engineers.
I saw this happen too many times at government sites.

Someone has told them that "the power lines are balanced, so
there will be no radiation from them! My professor told me so,
my text book says so and that's the end of it!"

Well, as any farm boy radio tinkerer can tell you,
them books is one thing, the real world is another.

BPL *is* coming, folks. Count on it.

I live in texas where there is plenty of room to do anything
you want... and yes, my yard has plenty of room to stretch
a 160m dipole if I wanted to... but if somebody wanted
to get on 160m and hasn't the realestate, they could always
hang a loop sky wire that only require 1/4 wave on any
given side instead of 1/2 of horizontal space; i.e., half
the area needed.

PRAY FOR THE SOULS OF THE FRENCH

"say it isn't so!" ..... The french proposal going
to the United Nations pertaining to the iraqi
situation is to ask for a RETURN of
the baathist part. OH yes, you read that right...
The party responsible for gassing tens of
thousands of it's own people, defying
international laws, pileing bodies in mass
graves as an aftermath of it's bloody internal
policies and many other crimes against
humanity, is going to have a cheerleader
from the country who benifited from it's oil
contracts WITH the baathist party (go
figure!)...And, finally, the french want ALL
mention of liberation taken out of ALL
paperwork and replaced with the word
"occupation", due to the fact that they do
not like its positive connotation. This from
a country that occupied Algeria for 132 years.

I don't know... I have really no CLUE how many votes you PCTA'ers will
get, considering you are the ones most guilty of what you just described.

Everytime I started giving analogies, facts, supportive evidence and
tried to have a rational conversation, you guys didn't last 2 or 3 rounds
and
broke down into "you WILL do it, that's the way it is, sorry, quit
being lazy, shut up, etc." followed quickly by name-calling that you
YOURSELF
admitted to in another post.

That's another thing the NCTA crowd has over you... like conservatives
beating
liberals by forceing them to stay accountable, we do the same to you.

> He doesn't have a callsign, either. Wonder why all the PCTA pay him any mind?

Because he's a plant.... the way he came into the debate, "all of a sudden", and quickly jumped on ONE side and attacked it for infractions that the other
side is EASILY more guilty of (any objective observer would see that).
He's a friend or acquaintence of one of the PCTA'ers, i am quite sure of it, from either offline or from email, or another ng... and the conversation went
something like "Hey, leo, come in such-n-such ng and just start saying this and that, and THEN claim that you are not on one side or the other so that you appear like a nuetral party and not somebody that would be biased in favor of the PCTA side!"

it's very obvious. I've seen it before, there is no doubt as it's beyond even just guessing at. When you bark at one side for using "empty personal attacks and name calling" and say therefore, THAT side has the weaker support, when in fact the pro test crowd is the one that has been going haywire since we question thier supreme authority and started name calling and getting personal and THEN childishly saying "we're just going to ignore you!" the way kids do at school (by using the block sender list)... well, you see the obvious conclusion.

Don't ignore him, that's what the PCTA crowd devolves to doing in it's (non)tactics.... but, likewise, take Leo with a grain of salt and realize you are dealing with somebody who is disingenuous and basically a plant.

Very few hams appear to realize that HF is not nearly so "recycleable" as VHF or UHF, where a repeater or packet node can be on the same freq as you are, maybe 90 miles away, and you cannot even hear each other.

On VHF/UHF. thousands of hams around the world can use the same freq at the same time, without interfering with each other at all. It's recycleable. The same cannot be said, of course, about any of the HF bands. To one degree of another, all of the HF bands have a much larger "footprint" than anything on VHF or UHF... In some cases, this "footprint" is global. One QSO per planet on this frequency, thank you!

It seems to me that either this distiction has whizzed over poor Carl's head, or he is a closet representative of the electrical power industry who would like to see the already overcrowded HF bands totally trashed out, so that hams will not really mind when BPL comes in and finishes it off.

I don't really care much one way or another about morse code testing, but yes I do have a definate opinion about the idea of opening up generalized HF access to entry-level hams. It's a dumb idea that gets even dumber as our population grows.

Over a period of time, we can expect the number of hams wanting access to HF to grow, but the laws of physics will stay the same. Only so many people can reasonably expect to get on the HF bands at one time. We can extend that a little bit through the use of bandwidth-efficient modes like PSK-31, but the fact is that wide-band modes like PACTOR III and Q15x25 are getting more and more attention these days because they can do things that PSK31 cannot do, such as providing reasonable throughput and effective error-correction. People who say that overcrowding on HF is a thing of the past due to PSK31 obviously have not spent much time listening on HF, and are blowing smoke out of their shorts.

Example: An ARRL / ARES group is currently looking into linking all the major NWS EOC's around the country via HF... Their first choice in an HF mode for this purpose? PACTOR III !

I wonder how many PACTOR III stations those dweebs think they are going to get on the air at one time? Don't they ever listen on HF? One area of common ground between the few hams who can afford PACTOR III and the even fewer hams who care about Q15x25, (another wide-band HF mode) is that both groups have a heck of a time finding some place to operate on HF without getting dozens of hams up in arms about the bandwidth they are taking up. - Enough bandwidth for half a dozen or more HF Packet QSO's, or more than a dozen PSK QSO's!

They get complaints, nasty E-mails, they get reported even though they are legal, and they often even get intentional interference from outraged hams. The other night, I heard a guy on 30 meters whistling into his mike, on a freq where PACTOR III was being used. The whistling disrupted the PACTOR III QSO just enough to slow it down and reduce its efficiency without quite breaking the link. The guy was very patient about the whole thing. I listened to him whistle for over half an hour. (I was waiting for the PACTOR III QSO to end, so I could get in there on 30m with another mode.)

If it hadn't been for the "whistling clown", the PACTOR III dude would have gotten in and out of there a lot quicker! - But that is typical of what the few wide-band mode guys put up with, every day. They are not popular, for the obvious reason.

As for that ARRL / ARES group... These are guys who are making decisions that can affect many hams, and aparrently not one member of that group has a clue about operating on HF. That's not a very comforting thought. The big question in this post is, "Why don't more hams understand that HF is not really recycleable like VHF and UHF?"

So, getting back to Carl's accusation that the ARRL is trying to keep entry-level hams off of the HF bands, my response would have to be: I don't know if that is what the ARRL really intends but if that is the end result, it is just fine with me!

Not a troll at all, Sir.

I merely came to this group to post the results of the RAC Morse survey - which I did in an impartial manner. This is the policy group - thought it would be a good place to post it.

Very shortly after that, I was attacked by several of the menbers of the group, for entirely nonsensical reasons. I then tried to clarify my points for all concerned, and received another barrage of crap from a copule of simians (that means monkeys, Clint - don't look it up) who assumed that I was pro code, or not pro code, not a ham, and some moronic 'terrorists come from Canada' inferences, which were way out of line (say, didn't the US Air Force discover that they had a Syrian-born airman in their ranks spying in the secure prisoner area in Quantico recently - did he come from Canada too? Jeez.....)

I have made my position known very clearly - but there are still a few folks in this group who incorrectly assume that someone has to be Pro-this, or Anti-that. Perhaps my language was too erudite for those folks - I'll try again, in plain English:

I learned Code to get on HF. It was the law, so I did it.

I use it more than I thought I would (I like it!)

Many people operate on HF and never use CW - so it isn't really a functional requirement any more. It is a strong tradition, however, dating back to the beginning of the hobby. As Len will tell you, Marine officers don't really need swords anymore - but they all get one, its tradition.

I don't believe that everyone should be forced to learn it. If someone is interested enough to do so, however, they should be encouraged.

If the Amateur community wants to keep it as a requirement, that's OK with me. If tradition is that important to the community, I'll respect that. I have it, I'm in. If the vote says that it goes, then I'm cool with that too. Doesn't mean that I can't continue to use it.

Clear?

73, Leo

Or is a troll just someone who won't agree with you, Sir?

Ryan,

I suggest you read what I actually wrote, rather than Larry's interpretation.
You may have read it already.

My point was not that hams *cannot* take care of their equipment, but rather that there is not much of an absolute *need* for theory testing compared to years ago because of the changes in typical modern amateur equipment.

That you can troubleshoot equipment is admirable, but I bet most of that knowledge and skill came from your own interest, not from having to pass written tests.

Hello Bob, sorry for the delay in getting back to you.

There was an entire thread on it here on rrap some time back. Thread title was:

"With CW gone, can the CW allocations be far behind?"

Lots of good quotes from various nontrolling parties.

Much of the rest of the world has no subbands-by-mode, and some folks think the
USA shouldn't have any, either. (I'm not one of 'em).

Oh, we should of course be fully prepared to fight for what is ours, and even ask for a little more ocassionally. But I think most would agree it's not in our best interest to carry that too far with unfounded accusations against the FCC itself. They've treated us very well over the years and I certain wouldn't want to see that end.

I'm not at all convinced that will be the case. I think there will always be those interested in what code has to offer and thereby attracted to learning code. I think that will be a lot more casual then before, with many more new people pounding out messages at an agonizingly slow rate until they get up speed. My real concern is that the more advanced operators will loss patience with those new experimenters before they have enough time to actually get fully involved. The old timers will have to develop tactics to reduce the interruptions caused by these relatively unskilled operators (drag them off to the Novice frequencies and so on). Perhaps the Novice frequencies should be redefined as the frequencies for all using slower code speeds, with minimum speed limits posted for the other code/CW frequencies (the autobahns of CW use).

Ah, but there is the old maxim about a lie repeated often enough. At some point, Larry's messages must have a response, if for no other reason other than to address the false impressions he leaves. As for the rest of your (fairly accurate) message, I usually (though not always) tend to keep any opinions, formed as a result of psychoanalyzing Larry, to myself. The poor boy is in bad enough shape without all of us adding to his obvious mental anguish. In fact, I probably wouldn't even have said that if the anguish was not so obvious. ;-)

Math is not my forte. I got through the classes, but had to struggle every single step of the way. In fact, I still struggle with it to some extent to this day, so I'll obviously never be anything close to an expert on it. Perhaps I need to do what most do and simply avoid situations involving serious math.

When I was in high school, I absolutely hated math. And not unlike you, I tried to avoid it as much as possible. But for some reason, the light came on when I entered college. As much as we might hate it, math does play a rather large roll in Amateur Radio.

If true, since such use is now considered a serious offense, this person would be well advised to discuss the rules governing the use of military computers for private recreational activities with the facility's system adminstrator or IT security officer. DoD has already come down hard on a few violators (I read in S&S that one E-6 was sentenced to two years in jail and discharged).

If there were a "million operators on HF", there would BE no HF. The overcrowding would go even farther than BPL in making it unusable for anyone.

Duh!

Typical of the ignorant, uneducated geeks who just can't stand any sort of organization or regulation, Keith would gladly screw things up for thousands of normal, decent, intelligent hams, just to make some rather dubious "point" that nobody but another ignorant, uneducated geek would care about.

Notice how he doesn't show a callsign? These days, that is a dead give-away for the new batch of anti-ham Trolls who are currently infesting the ham radio - related newsgroups and E-mail lists.

Yes, Keith is a mother's mistake, as he grew up to be an anti-ham Troll.

And it was all monitored by computers. My father worked at one of those stations in Turkey in the mid-60's (Karamusel Air Station near Istanbu). Nobody actually listened to the initial traffic by ear. Instead, computers listened for key words and recorded conversations that might be interesting (CW messages were printed). Those messages were then sent back to the states for screening and evaluation.

>the Clinton administration, huh Troll?.

Sadly, he is more or less right. The FCC has become heavily politicized
in the past few years, and they are controlled more by political pressure
than by folks who understand the technology. Pretty much all of the folks
who actually understand the technology have left the upper reaches of the
FCC management.

And it has nothing to do with the Republicans or the Democrats... it has to
do with the FCC. We can blame Reagan and Clinton both for some of it, but
it is pretty clear that the FCC no longer cares much about the public interest
or about maintaining the airwaves as a sacred trust.

:From: Keith (kewyatt@apexmail.com)
:Subject: FCC Chairman Wants Change in Amateur Radio.
:Newsgroups: rec.radio.amateur.policy, rec.radio.amateur.misc
:Date: 2001-04-01 00:32:05 PST

April 1, 2001 -(AP)
FCC Chairman wants to eliminate Morse Code and wasted spectrum by Hams.
In a speech Saturday night to the telecommunications industry FCC Chairman Michael Powell spoke out against the use of Morse Code and the waste of valuable spectrum by ham radio operators, ham radio operators are licensed CB operators that pass a Morse Code test. The Chairman is concerned about the waste of spectrum worth billions of dollars to the telecommunications industry that is currently being used by Ham Radio operators.
The Chairman also wants a big change in the spectrum wasted in the Ultra High Frequency area of spectrum in which Ham Radio Operators hold a staggering sixty megahertz of spectrum, more then any other radio service.

"Amateur Radio operators in this frequency band only need about two megahertz to chat with each other about the weather. Cellular and portable communications are in great demand and the FCC should not allow a few thousand people to hog spectrum needed by millions of consumers."

In a detailed presentation he outlined his plan to ask the International Telecommunications Union for the reassignment of a four megahertz chunk of spectrum to the airline industry that is presently held by amateurs near the overcrowded civilian aircraft band. He also outlined the conversion of thirty megahertz of frequency for use by telecommunications providers for data systems that could be used to supply high-speed access to the internet via radio frequencies.

To demonstrate why the FCC Chairman believes the Amateur Radio Service is wasting spectrum he played several tapes of licensed ham operators using vulgar language and jamming stations in the band he wishes to convert to the airline industry.
When asked by reporters about the possible opposition to his plan by ham radio operators the Chairman smiled and exclaimed, "We are going to cut it off and kill it!"

And by that same reasoning, there's no reason to test for most of
what's in the written test, because there should be no problem gaining
technically-inclined people who want to learn by doing after the
theory parts of the written test are gone.

> that mistake by continuing to perpetuate it any longer?

Some history on "incentive licensing" is in order here...

Before 1951, there were three classes of license, two written tests and one code test speed - 13 wpm. All hams had all privileges except that you needed a Class A to work HF 'phone on the ham bands between 3 and 25 MHz. Class A required a years' experience and another written test, but no additional code speed.

In 1951, FCC reorganized the whole system into 6 classes - Novice, Technician, General, Conditional, Advanced, and Extra. Old Class B became General old Class A became Advanced. Old Class C became Conditional.

The new Extra required 2 years experience as Conditional or higher, 20 wpm code and a written that was even more advanced than the old Class A/Advanced.

FCC also announced that at the end of 1952 they would stop issuing new Advanceds. And it would take an Extra or Advanced to work HF 'phone on the ham bands between 3 and 25 MHz.

You can imagine the rush to get an Advanced before Dec. 31 1952.

But at the last minute FCC reversed themselves and gave all operating privileges to all hams except Novices and Techs.

FCC figured that hams would go for the Extra "because it was there"
and because one could get a 1x2 call after 25 years as an Extra, or
some such.

But by 1963 there were only about 4000 Extras out of a quarter-million
US hams.

So FCC asked ARRL for a plan to get more hams to upgrade. ARRL
responded with a simple plan: reopen the Advanced to new issues and
require an Advanced or Extra in order to work HF 'phone on the ham
bands between 3 and 25 MHz.

Simple, huh? No more code test unless you wanted the 1x2.

Then FCC asked for comments, got a big pile (over 6000 letters) and
incorporated all sorts of things that made the whole thing much more
complicated.
>
> >Incentive
> >Licensing was an ARRL initiative,

No, it wasn't. It was FCC's idea.

> >and it was done to ensure that the
> >Morse/CW mode would continue to be used in spite of the increasing
> >popularity of SSB and digital modes.

Wrong again. The main concern of FCC was their perceived stagnation in
amateur technical matters. They were unhappy that so few hams had gone
for the Extra, and also that homebrewing had declined sharply and
"appliance operating" increased. Personally, I think it was also
partly "Sputnik fever".
>
> Another obvious mistake...let's deliberately restrict progress in the
> ARS by clinging to archaic technology like koala bears. Real astute
> leadership from the League there...NOT!

The League did not propose more code testing - just more written
testing. FCC was hot for the 20 wpm code test.

In fact, at one point (1965), FCC proposed demoting all 40,000
then-existing Advanceds to General, and creating a new "Amateur First
Class" license that would require 16 wpm code and a new written test.
(imagine - 5, 13, 16 and 20 wpm code tests). ARRL and others fought
against that move, and it was eventually abandoned.
>

> have stayed on the cutting ege of communications technology instead of
> having made the decision to allow itself to be left in the dust.

HOW?

As far back as 40 years ago, US hams were buying instead of building.
Even EE hams. As affluence increased, equipment miniaturized and
became more complex, fewer hams felt qualified to build their gear.

>

The ultimate question is "what are the trends in participation"? Check
out the scores in the ARRL 160 meter contest - and then realize it is
all CW.
>

How old is talking?

All we have is a 5 wpm code test. That's not proficiency, it's basic
entry-level skill.

> That *really*
> encourages people to become part of the ARS and be a part of the

> many of us to even *see* let alone solder one onto a PC board.

Exactly.

And the same thing can be said of many amateurs of any license class.
Including the techno-types that the nocodetest Tech was supposed to
attract.

> These
> rigs have been designed so the owners *can't* fix them, so that they

> repairs on mass-produced PC boards.

Exactly. So why have all that theory stuff in the writtens? It's
keeping out the doctors and lawyers and regular folks who just want to
talk on the radio, not build one.
>
> Following this, the rig gets packed up and shipped back to its owner,

And some of us won't buy any rig we can't fix. Some of us still build
from scratch.

Guess what mode is most popular among the scratch-builders and
rig-repairers.

No, Dwight, it was not all monitored by computers. In fact computers
were scarce as midnight sunshine in the 60's. I KNOW some people quite
well who were both operating CW in the military and others who spent
their entire enlistment copying it on HF with headsets.

My father worked at one of those

Hams are the least of the problems. There are many other users of the HF range who will be effected other than hams. Here's just a few:

US Coast Guard makes high use of HF
All branches of the military
Many long distance marine comms are still on HF
TransAtlantic and Pacific Air Traffic Control Comms are HF
(Imagine if the ATC ground station can't hear an Aircraft call is position).

And that's just a few services who are heavy uses of HF.

George

Ham radio simply wouldn't exist if it wasn't solidly based in
mathmatical principles.

My college Calc II prof called math the ultimate religeon. He said it
was one of the very few things one could put all their faith in and
just about never be disappointed. "Obey the rules and it'll never let
you down."

Now, now, Leo, or whoever.

Didn't you just just try to attach an effeminate point of view to
Len's post by dragging in some woman's book?

Or perhaps you think that a woman's point of view has no merit?

Talk about running out of steam and attaching people.

Are we clear?

Unfortunately, that makes no difference in THIS forum, Leo.

I've expressed not only "tolerence" of NCT's, but have praised
the accomplishments of most of the one's I know, but Lennie, Brain and
a few others always ignore those. It ruins thier rants.

Any opportunity for them to cite "HYPOCRITE" and thereby APPEAR
to be "defending" themselves from some percieved onslaught is never
missed.

As a BIG example, Larry Roll, who is adamantly "pro-code", has
posted countless items on his DIGITAL activities, yet Lennie and his
minions want yo0u (and other countelss faceless readers) to believe
that he's still banging out Code with a Model T spark coil
transmitter.

> So, does that make me pro or con, for mandatory testing? Where's the
> obvious? Hmmm - there's that old reading comprehension problem

> that would make someone one feel more important and in control, huh?
> (know the feeling?)

Myself and two or three others have, in times past, tried to
"organize" collective voices on certain REAL policy issues, but they
are always thwarted by Lennie, Brain, and a handful of others who
invariably manage to make almost every post here about the Code issue.

It's really sad in many ways, becasue we have a truly remarkable opportunity of our own at our disposal, yet a very narrowminded few would rather just spit and snarl about perceived "wrongs" rather than truly move forward.

C'est le vie.

73

The lower limit of frequency allocations by both ITU-R and FCC is
3 KHz.

80 milliHertz is in the range of natural phenomena and not in any
radio regulations.

No. My "model of behavior" in here was originally KH2D, an ardent
PCTA and far more caustic than I was at the time.

The other "models of behavior" were still more PCTAs, most of whom
have left. Those PCTAs either went SK or they went to schoolyards
or old age homes to beat up on people they could handle.

All of that is back at Google archives.

>A simple Google search will easily verify that.

Everyone is welcome to search ALL of Google as far as I'm concerned.

Look at ALL of it.

Those that do will see the blatant HYPOCRISY of your claim.

PCTAs have done that in here. They are still doing it.

>The audience just sits there looking at each other because they
>know that extremely rude person has just blatantly lied to them.

That's a description of the PCTA "regulars" in here. Well done,
Arnie!

>I wonder how many votes that first candidate would get?

Billions and billions in Fantasyland.

In the case of the morse code test for US amateur radio, the FCC is
the "audience."

The FCC tallied up the public responses (your description of "votes")
and created the no-code Technician class license 13 years ago.

The FCC tallied up the public responses (your description of "votes")
and dropped the maximum morse code test rate to 5 WPM just 3
years ago.

The FCC is well aware of the decisions made at WRC-03 and the
revision of all of S25.

Clint, I see a slight resemblance to one newsgroupie in here that used several false identities...had an address in Landing, NJ. :-)

One time this poseur was an "Army officer about to be called to active duty" in some conflict, thus setting the stage for the Fake's disappearance. The same individual used another Fake identity and was going to "visit my neighborhood" to "explain things to me" but never got any farther than Anaheim, CA, some distance to the south. The LAPD got a recording of the "message" he left at my telephone number (authorized tap while my wife and I were up north visiting). The LAPD has a section that works on Stalkers, organized after one stalker knifed a young actress to death some years ago. They take stalking seriously, even with two-bit puerile fakes who don't have the guts to be themselves.

Don't misdirect. You are NOT the moderator of this newsgroup.

You TOTALLY NEGLECT the obvious postings of the barbarian
character assassin in here still calling himself "K4YZ."

You are NOT a fair judge at all, just trying to incite a Flame War by
misdirecting to certain others.

By pretense at "fairness," your singling out certain targets is an open
example of HYPOCRISY.

Clint, the PCTA have exhausted their valid reasons for code test retention long ago, well before Restructuring. All the PCTA are able to do in here is go into character assassination. And they do...
:-)

Ohm's Law is expressed in simple algebra. That is about all the "large
roll" [sic, should be 'role'] in amateur radio. That and copying someone
else's values from a QST or QEX how-to-make-it article (rare) on
construction.

Please explain the "large roll" that math plays in amateur radio.

Were you on a roll and slipped in the butter?

Clint is right, "Master debater."

This is a public-access newsgroup, unmoderated. Unfortunately it is filled with a lot of PCTAs who can't argue their "necessity" for retention of a morse code test for the hobby called Amateur Radio. Those PCTAs must go into a constant character-assassination mode instead of arguing for the subject.

NOBODY with a reasonable memory needs to "search" any archives to talk endlessly about what anyone else said. It is all out in the open.

But, Ah-nold, you are so thin-skinned that you have to mount your high hobby horse to claim some "personal injury." Maybe all that morseman-ship strips all your skin off and you can't take it among others?

>serious math.

Heh, I have to admit that, in undergraduate classes on Calculus I, II, and III, my grades were A, B, and barely C, respectively. A problem with night classes and working all day yet still trying to maintain contact with other people. :-)

In looking back at all I was required to do in actual, working electronics design details, I NEVER had to use any math more complicated than simple algebra and trigonometry to get all the hardware data and parts selection. Some low-level calculus was used LATER for project reports, on a suggestion to make the determinations "look better" for higher-level staff who never got their hands dirty on the hardware. That suggestion was from another higher-level staff person who DID get his hands on the hardware whenever he could.

There's an analogy to code testing ("back to basics") and the rampant credentialism amongst the PCTA ("have to have the certificate to be able to do 'complicated' things)...namely this: The PCTA's "back to basics" is like looking up log and trig values in 5-place tables and "doing things the hard way" (to "show" something to others apparently). I got my HP-35 scientific calculator in 1971 so that I didn't have to waste all that time on look-ups of only 5-place values; the HP-35 came up with 10-place values in an eyeblink. Spot-checking against the NBS AMS 55, "Handbook of Mathematical Functions," showed that the HP values were indeed correct to 10 places.

That same NBS monograph also explained the mathematical approximations used to derive the original 5-place numeric values as well as many more places. Each modern CPU in a PC or Mac has a numeric coprocessor section that uses one of those mathematical approximations internally...and accurate to 14 decimal digit accuracy, not just 3 (as on a slide rule) or 5 (in 5-place tables).

An ardent PCTA devotee will now make some half-assed comment about
"it doesn't apply to HAM radio." Not directly. Having to know morse
code for a hobby activity involving radio regulation by licensing is much
more PRIMITIVE than sitting down and doing a series equation to
obtain a logarithm or other transcendental numeric value.

No doubt the ardent Credentialists in here will come up with some kind of
BS about "needing degrees" to understand it all. :-)

Len Anderson

I think that many failed to note a subtle bit of wordplay I did.

Larrah apparently thinks he is a Hiram Percy Maxim reincarnate since
he drags out the 1920s boilerplate "Maxims" that St. Hiram wrote in
early issues of QST when Kode was King in New England.

Hence "Maxims" with a capital M.

Too subtle for most of the personality assassins in here. I'll have to
"dumb down" to their low level. :-)

Not shouting. Do your eyes hurt?

>> I make no bones about not being licensed as an AMATEUR and have
>> said so from day one in here.
>
>Everything isn't all about you, Len.

Apparently the PCTA think so.

Since they can't support their view of retaining the morse code test, they
attack personalities.

>> What you have is some idiot who PRETENDS to be an amateur
>> <something> in Canada and won't identify himself.
>
>Why do you think Leo is pretending anything?

She hasn't got the guts to identify herself.

Despite your pain with PREVIOUS screen names, I've never attempted
to post anything without identifying myself.

>When "vshah101" showed up here and said he was an EE and a ham but would not
>identify himself, you had no problems with that. But you are all over Leo for
>doing the same thing.

Don't misdirect into more personality character assassination.

The SUBJECT line of this thread is "1/4 Wave Dipoles."

This whole newsgroup was created to discuss-debate-argue the code
test issue.

It wasn't created for the sole amusement or daily guru column from
Jimmie Miccolis where he would sit in judgement of all others.

>> If you wish to live in a fairyland of make-believe, be my guest. Just
>> don't start mumbling about laws for that fairyland.
>
>"Fairyland"? You're much closer to Disneyland than I.

The CODE FAIRIES, Jimmie.

Walt Disney Hq complex is about 3 miles south of me on Buena Vista
at the intersection of Olive. Walt Disney Productions is not involved in
either morse code testing or amateur radio or fantasizing about days
gone by in radio when Kode was King.

Ahhhhhhh....I see. "...even EASIER to beat..."

I think that sums up most of the posts here, even those of
persons who feign "superiority-by-virtue-of-enlightenment" such as
Clint.

Practical experience dictates otherwise, but hey...When it COMES
to facts and practical expereience, that's where the Lennie Crowd
suffer the most.

> epithet for "dickhead").

So far you've not been able to disprove the assertion.

You continue to make assertions about persons and organizations
that are easily disproved via third parties.

Your assertions of "lodge hall" secret organizations,
mismanagement, and obsolesence have all been proven untrue.

You make frequent allegations of dishonesty of the ARRL or it's
staff and elected field organization, yet you refuse to provide any
evidence of any kind to support it what-so-ever.

You frequently state that your "only" intent in here is to
"debate" the validity of Morse Code testing for Amateur Radio
licensure, however your myriad of rants on government, personalities,
politics, alleged bigotry and other NON-Amateur POLICY matters show's
who the TRUE hypocrit is in this forum.

"Putz" is as mild an adjective for you as decorum permits,
Lennie, and so far you've done NOTHING to prove me wrong and
EVERYTHING to prove me right.

Live with it...you ARE your own worst enemy.

Well, since I missed it, you'll have to include me in that category also.
Since I was rushing through the messages, I wasn't paying attention enough
to catch fine details like that.

Then I was wrong to accept your apology back in 99. I must have actually
fallen for your BS.. You did notice that I stopped replying to your
e-mails, a long time ago, didn't you? Ever wonder why? I'll tell ya.

As far as Im concerned the BARF and the sister organization the Stumpjumpers are nothing but radio terrorists. And if Herby hadn't been popped and thrown off the bands you would ALL still be jamming Intercon and MM nets on 14300/14313. Your ALL A BUNCH OF RADIO TRASH.

That clear enough Franky?

Dan/W4NTI

I guess I HAVE TO SPELL IT OUT TO NUMBNUTS, eh? Ref my last post to you.
Now here is another.

I no longer believe your apology was sincere. Based on your actions and
your remaining membership in a Ham Radio Terrorist group (s).

In otherwords Franky, you have no credibility.

Now take your HO HOs and shove them up your BARFY/SJ arse.

Dan/W4NTI

Well, I haven't openly tried to avoid it yet. I can get it done, but I have to seriously think about it before I remember how to get where I need to go.

> But for some reason, the light came on when I entered

That light never came on for me. Like I said, I still have to work at it. And things are certainly not getting better as I grow older - I've clearly forgotten a lot of what I once knew.

ROFLMAO!!! I like how Waddles keeps addressing me directly, when the only time I see something from him is *if* someone happens to respond to a post of his; and most don't--or at least I don't see them if they do.

I would say that most men who are nitwits are going to be distracted by the topic of tits. Those with some intellect about them, I daresay, are way above the subject of a body part. Oh, wait--did I just mention intellect at the same time we are talking about Waddles? ;)

I never got an "A" in math. I did get an "F" once and had to take the class over. However, the remainder of my math grades were "B" and "C," and I was darn thrilled to get that "B" occasionally. I did just fine in all my other classes.

You won't get any argument from me. I probably wouldn't touch most math today without a calculator (and most others wouldn't either). And code is a primitive way of communicating. If that's one's cup of tea, there's absolutely nothing wrong with that. But it is fairly absurd to continue to require it of everyone else.

> KT4ST

I think that a lot of people who imagine themselves to be "poor" at
math are actually the result of poorly written math books and
less-than-stellar math teachers.

I had the good fortune to have an *exceptional* math teacher in high
school. He taught algebra and trigonometry. I was in his 9th and 11th
grade classes.

His attitude was simple: *Anyone* who could be in high school could
get an A in his class if they knew how to add, subtract, multiply and
divide. All the rest was practice and understanding a few definitions.
Most of all, he made you believe you could do it. "Can't" simply did
not exist in his classes.

Typical test: 40 to 60 problems in a 45 minute class. Sometimes as
many as 80. Problems like factoring polynomials, simplifying complex
trigonometric expressions, etc. And yes, some of us got perfect
scores. Not often, but often enough to know it was possible for us.

We thought he must have been some sort of math genius because he would
do things like multiplying two four-digit numbers in his head, and get
an answer that was either spot-on or very close. In a few seconds. But
when we researched his education, it turned out that he was an English
major! His real skill was not in math at all, but in communicating
clearly. And this was in a working-class school with 40-some teenage
kids.

One day he derived a rather odd looking formula on the board. "Lads", he said, "this is the quadratic formula, which can be used to solve any quadratic equation expressed in standard form. I expect all of you to know it like your name. Can you do that?" We all nodded.

And the lesson continued with how to use the formula.

Next day he walks in, points to a kid and says "What's you're name?"

Kid stands up and says "Bill Gallagher"

"Sit down!" He points to another kid, same question, similar answer.

Finally a third kid gets the idea and kind of stammers through "umm, negative b minus..."

"Sit down!"

Of course none of us could rattle it off - and he called on every single one of us.

"Lads", he said "I'm shocked and disappointed. You were supposed to know that formula like your name."

You can bet that the next day we all knew it.

And to this day, if anyone who had that teacher encounters another of his students, we will be able to rattle off the formula *and use it* with no problem. And that's not just those of us who went into engineering or science or math, but the kids who became lawyers, doctors, businessmen and policemen, etc.

That's the power of a good teacher. Imagine if they were all that good.

Of course, I had a bit of an advantage. I'd learned the elements of trigonometry (sines, cosines, and a few other things) and some very basic algebra on my own, in order to understand what was in the ARRL Radio Amateur's Handbook, build my radios and get my Advanced class license at the age of 14 - before I ever set foot in high school.

Thanks, Steve. You're quite correct - there are some remarkable opportunities which we need to explore!

What I don't understand is why the intelligent members of this group put up with all of the QRM intentionally generated by just a few troublemakers.

For example, Len is not an Amateur, (well, not a Radio amateur.... :)), and states freely that he does not have any desire to become one - yet he is involved in endless vitriolic arguements which are entirely moot in his case - no matter whether code stays or goes, he isn't part of the Amateur community, as he has not paid his dues (who in hell cares about military or commercial comms experience - this is Amateur Radio!) Realistically, Amateurs have no interest in his opinions - he has chosen not to join the community, and 'pay the dues" by becoming licenced. Quite obviously, he exists in this group only as the resident troll, bullying all who disagree with his pontifications and opinions. Look at today's barrage of feces that he posted, for example, or yesterdays -- was there a single statement made that would improve or change the state of the hobby? Any positive comments? Any news? Anything relevant at all? No - just a series of personal attacks on those who won't see his way. Who cares what his way is? He don't matter - he ain't a Ham. Just a sad old has-been who enjoys beating folks up (or trying to :)) in the newsgroup. A pitiful old erstwhile military comms operator, circa 1950s. And his buddies aren't much better....just younger clones of the same persona.

Shut them down. Men without honor or intelligence or relevance are not worth anyones' time. I've demonstrated some effective techniques that can be used to squelch QRM from these types of individuals - give 'em a try. Or, use silence as a tool - remove the audience, and adios boors. Go for it! You don't see Len dealing with my posts anymore, do you? He can't - he's been disempowered! Surplussed again. Discharged. He can't argue with logic, or intellect, or reason, and when there's no possibility of personal attack - game over! Plus, he knows that I know what he is.......he ain't fooling me!

This is rec.radio.amateur.policy, not alt.hasbeen.flamefest - let's get these guys over to the appropriate forum, and get back to discussing the future of Amateur Radio! Frankly, there are bigger issues than Code Testing to be discussed here - BPL could wipe out the hobby as we know it.......

To paraphrase Nancy Reagan, "Just Say No To Thugs!"

It was where my father worked. We lived right next to the facility and his job just about every night was to go and get those computers (or radios) going again whenever they stopped working. He had a terminal right in the bedroom to monitor it all. Again, this was in the mid-60's (1964 and 1965). I even went into the facility several times and there was only four or five guys working there (and none of them had headsets on whenever I went in). I remember the smell of electronics was strong enough to leave me gasping for air.

ah, I don't claim such, as i'll leave "enlightenment" up to left wing
liberals in government that have absolutely no clue about the world
outside of lecture halls, government buildings and lawyer's offices.

I only take the facts as they are and deduce a conclusion, rather
than take a passion-filled idea intermixed with rage against
opposition and launch a scathing attack devoid of everything
necessary to warrant a good debate and argument to back up
one's claims.

Oh, it's been done time and time again, and met rebuttles of nothing more
than insults and condescending remarks (young man, you just don't know
how easy you have it, blah blah blah) and then the hypocrisy kicked in
and we were accused of doing all these things when in fact it was your
side of the fence that was doing it.... of course, this was before your
buddy got a hold of you outside the newsgroup and asked you to jump
in and pretend to be an unbiased person who was passing objective
criticism.

BUT ENOUGH OF THAT... I know draw attention to the fact that
you are BUSTED AGAIN..... if you don't have a position one way or
the other (or so you've *CLAIMED*), then, um, why would you need to
hear "lucid and cogent points in a civilized manner" for debate and
argument if you're NOT a PCTA apologist/sympathizer/member?

You better stop while you are ahead. The more you talk, the more
you sabotage yourself... not to mention you better look over your
post VERY carefully and make sure you really meant to type
what you did and use the words you chose....

Can the FCC be sued for acting in GROSS negligence? Under the premise
that as professionals THEY SHOULD HAVE KNOWN they may be liable.

Yeah, I know you can't sue the government, but it sounds good!

I knew your real inner character and feelings would come out if
you kept talking enough, and you JUST did.

No, I will not shut up simply because I have factually destroyed
your position and then continued further to expose YOU for WHO
you are and WHAT you do.

Leo the unbiased objective reader, who attacks NCTA members
for using character attacks, said THIS on september 25, referring
to *certain members* of this NG...

"For the most part, it's an intelligent and good natured
animal - but you do have to watch out for the pricks.... ;)"

I will NOT ask you to shut up... or, how did you put it? invoke
my right to remain silent? (funny, I didn't know I had violated the
law and needed to invoke my rights)... on the contrary, I ask
you to KEEP talking and continue revealing yourself for
what and who you are. You just haven't learned.

Clint

and also, always remember this statement he made on september
25 in THIS newsgroup.... check it out and you'll see, just use a
find string search if need be, but he made THIS comment
when referring to certain people in here.. guess who, right?
And I QUOTE...

"For the most part, it's an intelligent and good natured
animal - but you do have to watch out for the pricks.... ;)"

Okay... now.. remember he said that the NEXT time he jumps
on YOUR for making "personal attacks" instead of "concise
argument and logical debate"...

I TOLD you he'd reveal himself eventually.

and you DID it again. That's the SECOND personal attack you've made,
while at the SAME time saying the NCTA crowd is the one who does it.
Along with THIS statement YOU made..

"For the most part, it's an intelligent and good natured
animal - but you do have to watch out for the pricks.... ;)"

referring to some people in this newsgroup on this same date (september
25).

You really SHOULD consider stopping and cutting your losses; the more
you speak, the more you harm your own case. I must admit, you do a much
better job at defeating yourself than 1,000 well trained debaters could.

Clint

> Actually, the reply was specifically directed at Len.

And I was replying to it anyway.

Oh, you're FREIND "leo" made this comment-

"For the most part, it's an intelligent and good natured
animal - but you do have to watch out for the pricks.... ;)"

on the same day he accused NCTA members of insults
and personal attacks.

If he's ever going to be a good debater, you may as well
also coach him on the side about how to do it
in a good and civilized manner, and not incriminate himself
by making an accusation and then turning around and
commiting that very same offense himself.

Actually, that was a fact. Character is absent in this individual -
that's why he behaves the way he does. He respects no one other than
himself - so - ergo - no character.

The other was humour. As I have already explained. And also fact!

Funny how that works, Steve! Are you going to try to make it to Dayton?

Here we have a bunch of people with different opinions that in spite of those opinions look at getting together for a enjoyable weekend that sounds like a blast. And in the middle of this, somone decides to whizz on our Wheaties.

Could it be that this would be a threat to the way he wants the group?

I'm going to agree with Scott, and by inference, with David: it's not
so simple as writing a check, but the FCC *is* being manipulated by
very powerful interests, and they're in a hurry. Not only are they
powerful because they have immense wealth, but they're all the more
powerful because they know that "Shrub" has presented them an
opportunity which won't come again in their life, and they are
determined to take every advantage of it in the short time left before
their pet goes back to his animal farm.

Bear with me for a moment: I'm moved to step back and take a look from
a wider view -

The most important thing that the Bush administration brought to
Washington is the belief, now widely held in the corporate boardrooms,
that rich people are entitled to enjoy robbing those less ruthless or
```

lucky. Lobbyists for both liberal and conservative causes have complained bitterly about the arrogance and greed that the Republican administration has allowed to fester inside the beltway: there is no longer even the appearance of democracy, and it's starting to strain the credulity of even so staunch a GOP stronghold as the religious right.

- From Reagan's somnambulance, through the first "Right Wing Revival" during the Clinton administration, up to our current economic mess, the Republican Party has been courting those with money by placing a rose between its teeth and a pistol in its pocket. The elder Bush and Newt Gingrich were, and their heirs are now, brazen and unashamed pimps for the idea that those that have shall get, and those that don't shall get screwed.

No sooner had they gained power in the House, then the GOP started to undo (and in a way that was very hard to reverse) every law, program, entitlement, and court decision which gave ordinary people a chance of living with a (little) dignity.

By the way, Newt wasn't just talking about the New Deal when he said "The great social experiment has failed" - he was talking about undoing centuries of progress, not just decades. The fact that his personal life was too personal for the spinmeisters to hide hasn't dimmed his enthusiasm for the good 'ol days: the theme of his book "Gettysburg", an fictional alternative-history of the battle, reveals an attitude that even Publishers Weekly commented on -

"The authors show thorough knowledge of the people, weapons, tactics and ambience of the Civil War, though their portrayals of historical figures like Lee, Meade, James Longstreet and Richard Ewell betray a certain bias (the Confederate men are noble and wise, the Union leaders hot-tempered and vindictive)."

In the "new" Republican view, it's not enough to move your business' assets overseas, or to "outsource" your back office tasks to third-world countries. It's not enough to (once again) utilize the dark-skinned to provide a lifestyle Nero would envy: the Old Elite feels it must squeeze the middle class until everyone with less than $1,000,000 of ready cash is living on rented land in a rented tent, owning nothing but a TV set so that The Massa can tell them how to vote.

But I digress: lets stop looking at the forest and go back to pecking at the BPL tree -

Frankly, if I was one of the old white men who run America, I'd be hard-pressed to find a downside in BPL. Consider:

1. The Air Traffic Control radio system has needed a major overhaul for decades, and BPL will provide the FAA with a perfect reason to spend Billions to trade-in every navigational aid and radio in the country, because BPL operates on some of the same frequencies and

will rendor most of the others unusable. Of course, the planes will have to upgrade as well, but airplane owners, as a class, have plenty of spare cash, and the fact that every other country and every other airline in the world will be forced to go along is just one of those "intangible benefits" that those with a certain lifestyle expect.

By the way, there will be a few dead, burnt bodies lying around while the FAA sells its new system to the Congress, but even that smell can't overpower the ordure of the Potomac at low tide, so you'd better get used to riding in the back of the airbus, paying more for tickets and maybe even thinking of flight insurance as a sensible precaution.

2. The power companies, made stodgy and unprofitable by such quant words as "service" and "obligation" and "customer", will enjoy a dramatic influx of badly-needed cash, which will arrive just in time to save them from having to admit their mistakes, reengineer their transmission systems, or (most importantly) actually work at alternative and/or renewable energy sources.

3. If they design the system well, BPL will enjoy a wealth of new options that even cable moguls don't have: a priceless data coral, with well-penned users whose choices will be limited to those favored by like-thinking men of means: every click will be tracked, every purchase planned, and every complaint laughed off. There won't be any "spam", since there won't be any advertising allowed into the system that the upper crust didn't choose to allow, and those whom exhibit anti-American sentiments or question the wisdom of Those In Charge [tm] will soon find that everything they ever put into an email is available to their boss in an electronic blacklist.

Of course, any slander or complaints about these common-sense capitalist perquisites would be nipped in the bud, and the system will Protect Our Children [tm] by guiding their tiny minds into well-mapped impressions of the hard, hard life that the rich must suffer in order to provide the servants with the benefits we should be grateful we're able to beg for.

BPL is, as its advocates have explained, needed to counterbalance the critical shortage of war movies and of Father Knows Best reruns: it will put those airwaves that have been wasted on other nations' viewpoints and a few hobbyists' toys to more productive use. Your Betters have said so, and now if you're a Right-Thinking American, you will stop whining.

"Clint" wrote in part ...

I only take the facts as they are and deduce a conclusion, rather than take a passion-filled idea intermixed with rage against opposition and launch a scathing attack devoid of everything necessary to warrant a good debate and argument to back up one's claims.

Excellent position, Clint. With that in mind, let's do some fact vs fiction debate.

On September 5, 2003 the Dakota Division Director released these survey results:

"Division members are divided on the Entry level license with slightly more of those replying saying that Morse Code should not be required for access to HF. That changes as as we move to General and Extra. Nearly 70% say there should be a Morse requirement for Extra Class licensees."

This is very close to my position on Morse testing. I believe that some HF privileges on all bands should be granted to amateurs upon entry into the ARS, and that CW testing should be required for the higher licenses, General and Extra. It would seem that this survey in the Dakota Division indicates (as I have stated many times) that a majority of hams are not strictly against code testing -- 70% seem to think that there should be some testing for the highest class of license.

Add to this the fact that CW is the second most popular mode in the ARS and that groups like "FISTS" have nearly doubled in size *since* restructuring, and I think the picture becomes clear. The support for the NCTA is not as strong as their advocates would have us believe.

About all that can be done is go to the congress. They run the FCC. Like
what happened when Powel tried increase the broadcasters chunk of the
stations. Congress got into it and gave them a attitude adjustment.

As a matter of fact, you can. Just not for monetary damages.

ARRL once sued the FCC over the 220mhz band,if you recall. It wouldn't
surprise me at all if a lawsuit did result if they go ahead with BPL;.
It's just to radical a proposal to be even sensible, much less bernefial.

Fortunately, our HF bands are interleave in between
allocation for aeronautical mobile, maritime mobile,
DoD, private fixed service, short wave broadcasting,
etc.

I do not believe that we will be anywhere near close
to being alone in this battle.

> Despite your pain with PREVIOUS screen names, I've never attempted
> to post anything without identifying myself.

Yes, you have, Many of your posts do not contain anything that indicates who you really are.

In fact, for all anyone really knows, you could be someone else who has appropriated the persona of one Leonard H. Anderson.

Has anyone on this NG actually met you in person or on the air?
>

I'm not misdirecting. 'vshah101' did not give a name or callsign, even when asked. But you had no problem with him or his anti-amateur remarks.

That's a fact, Jack ;-)
>
> The SUBJECT line of this thread is "1/4 Wave Dipoles."

So? Subject lines never deterred you from going off in other directions.

You sound threatened and angry because someone has noticed your double standard of behavior towards anonymous posters.

That's true some of the time on HF. Other times it's not. Depends on the band,
time of day, etc.
>

I think Carl quite understands the situation with BPL. In fact, he
independently observed BPL interference at the Emmaus test site and commented
at length against BPL to FCC. Excellent comments, btw, plus backed up with 'I
was there, I experienced the interference, BPL is a bad idea, period'. Or words
to that effect.

His independent confirmation of ARRL/W1RFI observation was noted in this
month's QST.

Hopefully the FCC will look at the technical lack-of-merit of BPL.

OM,

You probably won't need a calculator, at least for the reactance questions. Unless the pool has changed since I took the test, they're worded in such a way that you can eliminate two answers based on Ohm's law, and choose from the remaining two just by knowing that capacitance lags and inductance leads.

Frankly, when I realized this, I was a little TO'd ;-J. I'd studied reactance and polar/rectangular conversions for weeks in preparation for the exam.

My advice is to spend more time on directional antenna arrays and mosfet's; that's where the trick questions are.

HTH.

That might depend on the nature of the signals BPL uses. TJey could be
fairly RFI immune while causing vast amounts of itto other users themselves.

> --scott

The BPL proponents assert strongly that it's no worse than any other
Part 15 device, thus trivial. Lots of Part 15 was *never* trivial, and
I along with many others strongly opposed allowing them on HF
in the first place, but you see what good it did.
And they want the Part 15 output levels raised considerably!
What nonsense!
MY fear is that certain politicians have told officials at FCC to
"Make it happen" regardless of the fallout. IOW, the "fix is in".
If the Commissioner's speech in the quoted post doesn't indicate that
what, the heck DOES it indicate??
If that proves to be how it is, the ship will surely go aground,
("hit the sand") and it WILL be time for ARRL and others to file suit.

Dick

One thing in our favor- They can't wire the entire
planet at one time, so the early areas should be first to
experience real problems. The first time BPL causes someone
a real serious, costly problem (that WILL happen)
and the lawsuits start, that may slow down the implementation
a bit. Might even head it off. Doesn't look like an exactly
glowing business plan, anyway. And the need to rebuild infra
structure instead of throwing money at BPL was well
demonstrated last month in the NE USA blackout.

I wonder how hams are faring in the test areas. Anyone
heard anything?

Dick

5619. LEO BUSTED AGAIN!

HEY, wait a minute.. a few threads back up you TOLD me,
and I quote...

"Actally, that's a quote from your friend, Len. Note the
CAPITALIZATION of all of the NOUNS to make it clearer.

You really should investigate an English as a Second Language course,
my friend!

Leo"

Okay, so FIRST you say it's a quote of Len's (which I proved it
was NOT with a cut and paste and the time stamp so it can
be found easily).. THEN you admit it but try to dodge by
saying "it's humor, not logic"... but ADMITTING it all the same
by trying to EXLPAIN it the second time.

BUSTED!

so, in addition to being a hypocrit, you are an outright liar.

It's SO easy.
You need to just find whatever ham set you up to come in
here and do this that you've failed and been exposed.

Talk some more and incriminate yourself. :)))

Here's what we do --- we built a (legal) KW rig into a van, install a vertical-
radiating antenna, cut out the roof and replace it with a fiberglass sheet. Drive directly underneath a power line with BPL running. Run lots of QSO's, and
have at it. We're legal. Induced RF just might make them think twice about it.
Yes, I know Ashcrofts boys are reading this --- Hi, muthers -- I live at

the callbook address. Bring some beer when you come visiting.

I never named anyone as the porcupine's - uh - quills. I assumed that
you know who you are, and, well.....apparently, I was correct.

Kindly do not include Arnie in that category by referring to 'us' when
you speak to him about it, though - ....he sure ain't one!

Why must I take a side in the code debate? Or does your ISP carry
this group as rec.radio.amateur.morsecode?

It's a policy group. For amateur radio. All policies. Not just the
one you like! It's a big world out there, 'lil feller.....

Pray for a clue, please - it would be a service to the entire Amateur
community. Pray to Saint Anderson, the Patron Saint of Lids...before
its too late....

That was humour too, Clint. You can go to bed now.

Hi Gang,
Curious about this BPL. Is there a technical treatise somewhere on the web that describes exactly how this BPL will be implemented? I am having a hard time determining how it works. I live a few miles from what once was TVA's largest substation in their electrical grid/system, maybe one of the largest in the world, fed by 0.5 MV lines. Sooooo lets start with block diagrams. How does it work?

I'll assume here that you mean entry to HF privilege, not an entry-class
liscense that gets you into the hobby. - Let me know if I misunderstood you,
there.

I really don't have an opinion about retaining the morse code exams. If I
were judging the matter on the basis of the debates I've heard, I'd say the
pro-code guys have won every arguement, hands-down. - But I seriously doubt

that it will be judged on that basis, so that's kind of a moot point, isn't it? Debating points are unlikely to carry the day.

Which ever way it goes, I'll be happy to see the controversy die down. I've been reading the same four or five arguements on both sides of this issue for a long time, years of it... Mainly, I'll just be glad to see it all wrapped up, whichever way it goes.

The ARRL is getting a good start on what I would set up for entry to HF privilege with it's new certification / continuing education setup. Rather than cramming for a test from an answer sheet, I'd require the ham to pass a few of those courses. And yes, I'd make them pay a fee to take the course, just as it is now.

I'd leave the entry into the hobby about like it is. No-code tech, but I'd call it something different. That would be the only "freebee" liscense that would not require taking and passing a course of study to become certified.

I'm weird though.... I'd require ceretification for just about everything beyond basic VHF/UHF privileges. ... If you wanted to set up a packet node or a repeater for example, you'd have to get yourself certified for that. I would even have poor hams taking a course if they wanted to run over 100 watts power but then again, that's just me, and I don't seriously expect the ham community to go for my stodgy old attitude about this kind of stuff.

> >Over a period of time, we can expect the number of hams wanting access to HF
> >to grow, but the laws of physics will stay the same.
>
> "wanting access" and actually getting on the air are two different things.

The HF rigs will not be expensive much longer. Most of the expense today is not in the RF deck, it's in the rig's firmware. They won't be able to justify charging an extra thousand or two for firmware loaded up with creeping feature-isms for much longer, IMHO. It's just software.

I'll go even farther out on a limb and predict that one day we'll be home-brewing our HF rigs again, and not missing a single "bell 'n whistle" because it will be software controlled anyway. We'll just install this or that software on our computers, depending on how we want the radio to behave and what we want to do with it.

So I don't see any future in depending on high prices for equipment to act as a filter to control the number of operators on HF, or to affect the way the operators behave. I'd rather depend upon the filtering effect to be had from the education/certification process, because that is something we can directly control, and tailor to our changing needs.

I understand of course that none of this is likely to come about, but it's fun to talk about it anyway.

The usable stuff tends to be used. There are of course times when the bands are hot but hardly anybody is using them, but you don't see that nearly as often as you would have ten years ago, during the previous sunspot cycle.

Whatever the status now, introducing thousands of new operators will not improve the situation or make it less crowded.

> whoa - this snazzy digital mode is vulnerable to some yahoo whistling into
a
> mike?

Yes, I could see the PACTOR III station having to constantly re-adjust its link parameters. Usually that happens in response to the existence of resends. All of that slows the link down, reduces effective throughput.

All digital modes are vulnerable to noise, most often reacting by a reduction in throughput. In severe cases, it is impossible to make or maintain a connection. In that respect, it is comparable to voice or CW. Noise degrades and slows down the ability to transfer info... A lot of noise will shut you down.

> >
> >If it hadn't been for the "whistling clown", the PACTOR III dude would have
> >gotten in and out of there a lot quicker! - But that is typical of what the
> >few wide-band mode guys put up with, every day. They are not popular, for
> >the obvious reason.
>
> So what's the cure?

A rational digital network would use the high-throughput, wideband stuff only for a limited number of long-haul links, organized in much the same way that AMSAT controls the proliferation of SATGATE BBS stations. Once I was going to sink several thousand bucks into a SATGATE station, but AMSAT told me that I was too close to an existing SATGATE - a station located over 450 miles away in west Texas. I could build the station if I wanted to of course - but I couldn't be a part of the network.

With the wide-band stuff, the idea is to limit its use to where it would do the most good... Overseas routes, and coast-to-coast routing. Long-haul stuff. The slower, narrower, cheaper stuff goes for the more numerous statewide and regional links, with VHF/UHF taking up the slack for smaller states and for metro areas in the large ones.

That would be rational - but our present system is anarchic, not rational. We could inject a bit of rationality into the process by requiring education and certification in order to operate as a part of the network. They have been doing this in Europe for quite some time and as a result, their digital network is at least ten or fifteen years in advance of ours. I don't think we'll do that though, so we'll just have to keep muddling along as best as we can.

It's a fact that the money, just like the spectrum auction fees,
will not stay with the FCC, but go directly into the bottomless
black bag called the General Treasury Fund, as The Congress mandates.

Who do you think is pulling the FCC's and The Congress' strings ??

About 20 years ago, Dane Ericksen, N6AJY, who became a senior
engineer with one of the big broadcast engineering consultant firms
after working for me at the FCC for 10 years, and who is a long-term
officer with the Society of Broadcast Engineers, submitted a Petition
for Rulemaking requiring that one of the then-seven Commissioners
have a degree in engineering, parallel to the Rule requirement that
an attorney practicing before the Commission must be admitted to
legal practice in one of the States or the District of Columbia.

His petition was flatly turned down without even getting an RM
number.

D'wanna Terry is a Division Chief, two levels below the Commissioners. The Bureau Chief - her boss - is also clueless. His job is to honcho spectrum auctions. At one time one became a Division or Bureau Chief by working in the next lower job and getting things right, but that was a long time ago. The present crop are all "revolving door" appointments who, in general, do not have any prior Commission experience other than ability to do what the Eighth Floor wants them to do.

At one time, each Commissioner did have an engineering advisor who was a senior engineer and knew what the technical problems and issues were and so advised his boss. The last Commissioner who had one was Jim Quello, one of the "good guy" Commissioners some 15 or so years ago, a retired broadcast executive who was the author of the phrase "If you think that you can buy my vote with a ham sandwich, you got the wrong guy".

My kind of guy.

Do you mean the way CBers made channel 5 unwatchable 25 years ago?

I don't know much about BPL, but I think the TV analogy might hold. Given the bandwidth of BPL, there must be dozens, maybe hundreds of channels on the powerline. Can every one, or most of them, be wiped out? I'm thinking somebody came up with some pretty robust ways to deal with interference.

But what if it does stop BPL? BPL isn't being backed because it's a technically elegant system. It's being backed by politics. Rural areas were critically important in the last Presidential election, and any candidiate would love to say something like "MY OPPONENT IS STOPPING ONE FORM OF HIGH SPEED INTERNET DISTRIBUTION ON BEHALF OF HIS PALS IN THE TELECOMMUNCATIONS INDUSTRY, BUT I PROMISE TO BRING IT IN, RIGHT ON YOUR POWER LINE, AS SOON AS I'M ELECTED!!" Of course, that would be a political misrepresentation, but politicans get away with worse every day. Politics turns into a numbers game.

How many politicians or bureaucrats are saying anything negative about this goofy scheme? Politicians may not know physics, but they do know how to count.

(not responding directly to this post but in general)

I was thinking recently about this whole BPL thing, and was thinking that if it is going to affect the amateur bands, that logically it would affect other services such as public safety, governmental, and possibly even military and aviation frequency allocations as well.

My thinking is, if my logic in the above paragraph is indeed true, then wouldn't educating and getting those groups to lobby against BPL be more effective rather than just us as a group collective?? Seems to me that those organizations would have more effective "pull" with the FCC than we would.

Am I wrong in this thinking or ???

No problem - I found it. As I explained in your previous post, this
was my error - I saw the text from Len that you attached at the
beginning of the message, and assumed that you were attributing that
to me.

Copy below:

Leo

Note the capitalization of the words in Len's post - that's what I
replied to you on. Your quote from me was actually below that - and I
missed it. Sorry. If you read my reply carefully, you will see that
I do not capitalize any of my comments. Should be a good clue to the
error that occurred (read carefully, please!). But, my friend, you
have tried to jump on folks for making mistakes before, and here we go
again!

To clarify, here's a wrap up of this thread so far: (and referring to
the quoted message above:)

- Len wrote the capitalized buffoonery. As usual. Simila merdae, differo diem.....

- I wrote the 'porcupine' comment. It was intended as tongue-in-cheek humour. It is also quite true (ask the group!)

- I misread your posting, and erroneously thought that you were attributing Len's comments to me. I apologized.

- 'Hypocrisy' means "insincerity by virtue of pretending to have qualities or beliefs that you do not really have." I state my beliefs clearly and honestly in every post. They are mine.

- 'Hypocrisy' does not mean pointing out that some members of this group were accuratery described by the metaphoric porcupine comment. That too is my belief. And others, as you have seen.

- 'Capitalized' means using all big letters in your words.

- You were writing in support of Len's buffoonery. As usual. Simila merdae, differo diem ad nauseum.....

- Porcupines are good natured animals. They have quills. The quills are sometimes called pricks.

- So are obnoxious, loud and arrogant people :) They are not porcupines, though. Just pricks. They are not considered to be good natured animals.

- You seem to see this issue as some sort of victory. It is not. The only issue currently being debated is the manner in which you and a few others deal with issues. I could not care less whether code testing stays or goes. This is beyond your comprehension. But, this group is about amateur radio policy, not just code testing issues!

- English isn't your strong suit. You should read carefully before you answer postings.

- Me too. :)

- You posted this issue three seperate times, in a childish attempt to declare a victory that cannot possibly exist, as discussed above.

- You will misunderstand most of the above.

- The majority of readers of this newsgroup will not.

- Tomorrow, you will post further buffoonery. About code testing, and nothing else.

- Big Al will reply to this message with Ho Ho. Or Ay Yi Yi. Or both.

- The people of Texas are probably very grateful that you are not a lawyer. People on Death Row are probably very upset that you are not a D.A.

All is right with the world.

Sleep well,

30, Leo

I posted something similar to this in a different newsgroup, but I wonder if based on the logic that the interference could also affect other services such as emergency services, aircraft frequencies, and even military frequency allocations, it would seem to me to be important to persuade those groups to pressure the FCC against the whole BPL thing.....

Yes, the equipment has changed, but I still see the need for some knowledge
in that direction.

I would honestly say a little bit of both. I have always been a tinkerer
since almost back in the toddler days, which usually drove my parents
completely nuts!!!!! I just gotta know how something works or I am not
satisfied!! :)

Actually, the VE groups need to push the issue since they are (for the most
part) the persons responsible for administering the tests etc. That needs
to be a collective effort between the arrl, w5yi and any other VE groups out
there, if they could get together and WORK TOGETHER in that respect at
least.

and, like your buddy arnie who set you up as a plant in this newsgroup
in the FIRST place, I now thank YOU for admitting your hypocrisy
the way HE did when he admitted to calling people jerks shortly
after accusing the same people of "name calling".

You guys make it so easy.
No WONDER your losing the morse code test debate; the
FCC is a real government entitiy in the real world and you
won't get anywhere with them by name calling and insulting
them.

bzzzzzt, nice try.

There is no debate on my posting style. Debates include at least two opposing sides to an issue who are argueing thier points to try to get an unbiased third party observing to accept thier reasoning. The debating here that sparked him being planted as an unbiased third party that nobody is accepting is over cw testing.

And don't think anybody buys the porcupine anology; he already admitted to having done it as an insult, but tried the explain it away as humor. You're too late to save him on that one. You guys may have prearranged this ordeal of his but you haven't done a good-follow through on coaching one another on what you're going to say before you post.

Clint

Oh no you didn't. Don't try to claim that you had no idea to what
I referred because I cut and pasted the VERY remark I was referring
to; there was NO doubt to what I was referring to.

You've been caught in a lie and are trying to wiggly your way out
of it. That's why they say "what a tangle web we weave when first
we practice to deceive". You're already snared in your own deception
and falsehoods and are getting tangled with every remark you and
your co-partner in this failed venture make.

Clint
>
> Let me know when you set up the ESL course - maybe I'll go with you
> ;)
>
> But, in answer to your post - that is not hypocrisy at all - its a
> fact. This group contains several trolls who try and dominate every
> thread, and twist it around to a code argument. You are one of those
> trolls.

You're the one that has jumped in here and started making accusations
that I have proved you've made. Too late on that one. And the only
people that would agree with you are people who are on you and
arnie's side of the fence, and as they are people with a biased
belief beforehand, they are not credible witnesses as such (not
hypothetical objective observers), therefore to say "ask them if
you are a troll" is like asking the democratic party if you want
to know if the republicans are bad politicians... it's called a
self-fulfilling arguement as well as circular thinking and not only
biased but not logical.

Well, i've pretty well destroyed your attempt and it's been fun
but continuously doing so really holds no more merit than
stealing candy from a baby.

If you want to continue to say things that conflict with
previous things you've said and make yourself out to
be more and more of a hypocrit, not to MENTION
proving that you are nothing more than a plant and
most likely one of Arnie's, then please feel free to do
so. Empty, meaningless one-way conversations may

not be the original purpose of newsgroups but there is certianly plenty of precident for it.

If you ever do decide to get your ham radio license, we look forward to seeing you on the air. While this newsgroup sounds pretty "spiney" and has it's share of sharp seeds, the airwaves are fun.

How do you know, Len?

There are more hams today than ever before. Telegraph keys, CW-only transceivers and related equipment are still popular items. Contest scores and participation are up.

Perhaps the percentage of use is decreasing, but the total use may be increasing.

Let's see - a 160 meter square loop is about 140 feet on a side. Many hams don't have enough room for a full size 80 meter dipole......

The loop will also be a cloud-warmer unless it is very high up. Much better off with an inverted L.

Just for reference, Leo...

Back on January 19, 2000, Len did say he was 'going for Extra right out of the
box' or words to that effect. Back then he was posting here as 'Lenof21'
(aol.com) . That was over 3-1/2 years ago.

Of course he did not say *when* he was going to do it....

More like 12 years, anyway.

btw, didja see where a US and a Czech ham had a successful EME QSO on 24 GHz? Used relatively small dishes and less than 100 W at each end of the QSO. Pretty snazzy bit of homebrewing to put together the required stations.

And the mode used? One guess.

Incorrect. I have repeatedly pointed out Steve's behavior as counter
productive. It has become obvious, however, that you and he have some sort of
reciprocal provocation agreement. You proke him and he responds.
>
> You are NOT a fair judge at all, just trying to incite a Flame War by
> misdirecting to certain others.

What did I write that is not true?

'Vshah101' show up here and posted anonymously. Nasty stuff, but he was anti-codetest

You defended him and had no problem with anything he wrote.

It is a fact that no one who agrees with you can do any wrong, and no one who disagrees with you can do any right.

You keep proving the following profile over and over again, Len:

No matter what job, educational level, employer, or government/military service that a radio amateur has, if said radio amateur opposes Mr. Anderson's views, he/she will be the target of Mr. Anderson's insults, ridicule, name-calling, factual errors, ethnic/racial/religious slurs, excessive emoticons and/or general infantile behavior.

;-) ;-) ;-) ;-)

> Why would you need a Calculator, none of the Questions are that tough

They're only tough if you try to understand the material, but if
you're just going to memorize the questions and answers, then you're
right.

You would only need a calculator if you were going to work through a
problem, but if you're just going to memorize the questions and
answers, then you're right.

Were you an amateur radio operator during any time that Ham Radio
magazine was being actively published?

If so, then you have no excuse for not being published in Ham Radio
magazine.

> Furthermore, PLEASE cite for me ANY reference otehr than that
> FAILED magazine where Lennie has ACCOMPLISHED anything.

One accomplishment is enough. It is 100% higher than your
accomplishments.

> Further yet, please show me where Lennie's work was original.

It was originally published.

> Can you show me ONE refernece in Amateur Radio where his ALLEGED
> work was cited as reference in some project?

Again, cite me your published work, original or otherwise.

>
> AMATEUR RADIO, Brain...Not maritime...Not Army...Not Commercial.

I see, you can bring in your supposed military and CAP anecdotes when
they suit you, but not Len. That is a double-standard.

> Specific question that can be answered YES or NO...Do you know
> the difference between AMATUER RADIO and any other radio service?

Marine radio is not Amateur Radio.

Civil Air Patrol radio is not Amateur Radio.

Both have been talked about here on this Amateur Radio Policy group,
BY YOU!

> > > And despite the amount of effort you put in to trying to make

No, that is not it Frank. You just don't get it, do you? Being a member
of the BARF and SJ crowd is not the best thing for ham radio. When you
understand that, we can go from there.

The transmission lines are radiators. As such they will also receive.

Power lines are right up next to the rigs. The RF from the radios will trash the BPL. Probably by causing drop outs and adding lots of extra delays. Basically it will make BPL useless anywhere near a ham station.

It probably wont take a KW to trash BPL. Just needed to communicate on HF.

Just for kicks, I borrowed a tuner from a friend over the weekend. This is a homebrew job. Hooked it to the 40 meter dipole and loaded the KWM-2 into it on 80 meters. Made 5 contacts, 3 out of state, all good copy on both ends. Guess you just don't know how to do it dannyboy.

OK, let's say it does slow or even stop BPL near a ham station. Why
wouldn't the FCC restrict amatuer operations around BPL areas?

He does seem very contemptuous of amateurs, though, because they do
not have the depth of experience or operating knowledge of commercial
and militart licence holders such as himself. Assuming that he does -
he may be a poser.

Technically, he may be able to pass the Extra without the need for
further study, but what would he do with it? He seems to be equally
contemptuous of conversing with people, which is a requirement to
enjoy the hobby.....

>you really are.

There YOU are MISTAKEN.

I've listed my employers in here and I've given names and callsigns to
friends who are radio amateur licensees. My bylines in Ham Radio
magazine carried the same USPS address I have now.

Since you won't accept any e-mail attachments from me, the only
recourse for you seems to be a lot of flame war ignition attempts and
not bother to check anyone out.

>In fact, for all anyone really knows, you could be someone else who has
>appropriated the persona of one Leonard H. Anderson.

Think whatever you imagine.

I am listed in the Southern California white pages...my postal address
is not secret...you can hire a private investigator and have my neighbors
interviewed. No problem. You can also find yourself in a civil court
or (in some government districts) being investigated for harrassment.

You have enough raw data to ascertain who is who. You don't want
to. You would rather have your little jollies in here making your
"opponents" look bad.

>Has anyone on this NG actually met you in person or on the air?

Not that I know of...but then I don't know who all the readers are since
they don't post. :-)

Start with KD6JG. Work on to W6MJN, then N2JTV.

Several more know me but there are over 600,000 licensed radio
amateurs who are NOT in this newsgroup.

That's irrelevant to your little "cause" in this message, isn't it?

You want to "run" this newsgroup because you are here so much and
spend so much time posting.

>I'm not misdirecting. 'vshah101' did not give a name or callsign, even when
>asked. But you had no problem with him or his anti-amateur remarks.

YOU are MISTAKEN again. ERROR...you bad.

Some individuals in here post against YOUR and PCTA viewpoints.
That does not make them "anti-amateur."

You think of yourself as "representing ALL of US amateur radio" through
your expressed opinions in here. You don't. You "represent" only
opinions and viewpoints of a small group of PCTAs who wish to be the
elite of the US amateur radio community...one way or another.

You don't "own" US amateur radio and never did, therefore you don't have
ANY judgement value about who is "anti-amateur" or even "pro-amateur."

>That's a fact, Jack ;-)

Yes, Morrie, what I just wrote IS fact.

>> The SUBJECT line of this thread is "1/4 Wave Dipoles."
>
>So? Subject lines never deterred you from going off in other directions.

I posted IN this thread about dipoles. It's in Google if you've not
saved it to your HD.

YOU and some anonymous person want to use any thread as a
character assassination venue so that you can "get even" for all the
alleged "wrongs" committed against your radiogod personna.

THAT's a FACT.

>You sound threatened and angry because someone has noticed your double
>standard of behavior towards anonymous posters.

Not a problem to me. You MANUFACTURE a situation and try to exploit
it so that you have an excuse for talking bad about someone who has
opposite viewpoints to yours.

All you need to do is search Google for a lot of PCTA general harrassment
such as from the hundreds of postings by "K4YZ" that go un-answered
because that kind of posting only serves to make the harrasser happy.

>> This whole newsgroup was created to discuss-debate-argue the code
>> test issue.
>
>And other things. You are not the moderator, Len. Much as you want to control

YOU ARE NOT THE MODERATOR EITHER, JIMMIE.

LEARN TO LIVE WITH THAT.

>> It wasn't created for the sole amusement or daily guru column from
>> Jimmie Miccolis where he would sit in judgement of all others.
>
> It wasn't created for the sole amusement or daily guru column from
>Leonard H. Anderson where he would sit in judgement of all others.

Are you "threatened" by all those others in here who have opposite
opinions from yours? Are you feeling "superior" because you espouse
the standards and practices of US amateur radio of over a half century
ago? Are you so intimidated by those who have the courage to think
for themselves AND to speak out?

YOU sit in judgement on everyone who does not consider morse code
testing as necessary. A very consistent judgement, a condemning
judgement as if you are a holy radio god.

That's really a rather common syndrome of the PCTAs. They allow only
ONE viewpoint...theirs.

All other viewpoints shall be put down, destroyed, those who voice them
shall be harrassed, hunted, and so forth until they stop.

That's a lovely example of dictatorial totalitarianism, the arrogance of the
squatters who feel they "own" the hobby.

That reflects badly on the US amateur radio community when you PCTA
act that way. You are unable to present counter-arguments to NCTAs so
you call all their arguments "illogical, mistaken, or plain wrong" and then
want to harrass, intimidate, and humiliate them.

YOU may not think such is "anti-amateur." Someone attacked your Ego
Turf and you think "anything goes" in "fighting" them.

I'd call that Elitist, Arrogant, and Dictatorial but the Turf Fighters would
get

angry again...so I won't call it that.

I wonder what the FCC would call it if anyone there chanced to look in and read what the PCTA think, say, and do in here?

Arnie is defending his Ego Turf, Clint.

It's a fairly standard way he does it. Just another PCTA who can't get along with NCTAs who do NOT worship his mighty macho morsemanship.

This "Leo" doesn't really exist as any sort of Man.

He (or she) has no real interest in any subjects. "Leo" is just playing with people in a unique form of sociopathy brought out by the Internet's anonymity. It's a juvenile form of harrassment but gives this person much glee for getting away with it. By choosing the PCTA side, "Leo" gets support and encouragement from the PCTA regulars in here.

"Leo" is only involved with bashing personalities. "Leo" doesn't care about any debate, discussion, or argument on any subject. He or she just likes to hide in anonymity of the Internet and work out his or her frustrations of daily whatevers by bashing anyone he or she picks.

"Leo" feels secure in the Internet anonymity. He or she must get some feeling of "power" by remaining unidentifiable, to be able to hit on anyone. It isn't reasonable discourse on subjects. It is just a perverse form of aggression, of getting back at anyone without being physically hurt. It is that person's little fantasy world at work in the mind.

What is ugly about that sort of psychological perverseness is that it reflects badly on the lofty, noble principles that ARRL keeps saying about amateur radio. It is rule by a mild form of terrorism, of the very

"thugs" he (or she) complains "others" are doing.

"Leo" tries to project "power" with the inference that anyone disagreeing with his writings will be subject to harrassment, humiliation, or constant barrage of denigration. He (or she) is "powerful" yet without any power except to drive everyone away in disgust or extreme irritation.

What I find mildly curious is that the PCTA regulars are all "on his side." The PCTA like that for they are frustrated at the turn of events of recent history that is against their particular cause. What the PCTA regulars don't realize is that the syndrome of this "Leo" can just as easily turn against Them if they do not condone his or her statements. :-)

In article <hio6nvc53pdg9fpkq87hj5efarc8qr97s2@4ax.com>, Leo <nomail@nope.org>
writes:

>Thanks, Steve. You're quite correct - there are some remarkable
>opportunities which we need to explore!
>
>What I don't understand is why the intelligent members of this group
>put up with all of the QRM intentionally generated by just a few
>troublemakers.

Of course...in the Orwellian Truthspeak of the PCTA, all who do not
love, honor, and obey the PCTA principles are "false, misleading, or
nonsense" and should be opposed to ALL that the NCTA are for...

There is only ONE side that is noble, good, and true...the PCTAs.

Anyplace else that is considered dictatorial, totalitarian.

To this invisible, unidentifiable "Leo" it is Truthspeak for he (or she) is
a mighty "force" for all that is good, noble, and true. Not.

>For example, Len is not an Amateur, (well, not a Radio amateur.... :)
>), and states freely that he does not have any desire to become one -
>yet he is involved in endless vitriolic arguements which are entirely
>moot in his case - no matter whether code stays or goes, he isn't part
>of the Amateur community, as he has not paid his dues (who in hell
>cares about military or commercial comms experience - this is Amateur
>Radio!)

This is just a newsgroup for debate, discussion, or argument. In this
"Leo" situation it is a place to Hide while NOT trying to be reasonable
about any subjects.

"Leo" constantly targets personalities, not the subjects. He (or she)
cannot stand up for what they actually believe so they HIDE, secure in
their safety from physical or mental harm. That is not courage of
conviction. It is just cowardly harrassment of others for personal
pleasure, having nothing to do with the subject of code testing.

In the United States the morse code test for an amateur radio license
is a federal regulation required now by the FCC. Since we US citizens
have the Constitutional Right to petition our government for the redress
of our grievances (First Amendment), ALL US citizens can reasonably
discuss and debate that particular matter of policy.

"Leo" claims to be Canadian, is therefore NOT subject to the same
Constitutional Rights guaranteed by the US Constitution. "Leo" has NO

Right whatsoever (except under Canadian law) to have ANY say in US law. Yet, he (or she) claims some sort of (invisible) "right" to determine who shall say what in an unmoderated newsgroup about the Law of the United States of America.

"Leo" states that non-amateurs (apparently the overwhelming majority of humans not licensed in any administration's amateur radio service) are "ineligible" to speak about US Law concerning the USA's amateur radio regulations. Oddly, many of the PCTA insist that non-amateurs cannot speak or address their government even though those PCTAs are citizens of the USA. That is also illogical, dictatorial, totalitarian.

>Realistically, Amateurs have no interest in his opinions - he
>has chosen not to join the community, and 'pay the dues" by becoming
>licenced.

That is a mental aberration of this "Leo."

There are no such "dues payment" required under US Law, certainly not in the regulations of the FCC, the radio regulating agency for civil radio in the United States of America.

"Realistically," radio amateurs licensed in the USA are under USA law.

"Realistically," over two hundred thousand US radio amateurs became licensed as no-code-test Technicians since 1991. "Realistically," they are all lawfully licensed US radio amateurs who did NOT subscribe to any PCTA commandments.

"Leo's" alleged "realistic" statement is nonsense, nothing more than a perverse statement of territorial imperative ("turf") which is based on nothing but his or her personal opinion...which is solidly rooted in the PCTA mythology of might of morse.

"Leo" has NO data to verify that amateurs are all on his (or her) side. It is perverse personal opinion only, of a single individual hiding under a pseudonym.

>Quite obviously, he exists in this group only as the
>resident troll, bullying all who disagree with his pontifications and
>opinions.

More Orwellian Truthspeak. Falsehoods labeled as "truth of all" when they are just personal opinions.

"Leo" accuses those of opposite opinions as "bullies" when he (or she) is supremely guilty of the same.

>Look at today's barrage of feces that he posted, for
>example, or yesterdays -- was there a single statement made that would
>improve or change the state of the hobby?

Apparently the above statement of "Leo" is another "rational, civil discourse" of the PCTA regulars in here.

Anything against their viewpoints is a "barrage of feces." :-)

>Any positive comments? Any
>news? Anything relevant at all? No - just a series of personal attacks
>on those who won't see his way.

So far, this invisible "Leo" hasn't come up with anything but a lot of individual personality attacks.

"Leo" doesn't seem interested in anything but flame wars. Is that the spirit of US amateur radio? I think not.

>Who cares what his way is? He don't matter - he ain't a Ham.

Did I state the PCTA view of "Leo's" is dictatorial, totalitarian? Yes. One more statement of his (or hers) to prove it.

Perhaps Industry Canada has some rule or regulation requiring amateur radio licensing in order to discuss, debate, or argue Canadian law? No such thing is required in the United States of America...open discourse is a fundamental Right of citizens of the United States.

>Just a sad old has-been who enjoys beating
>folks up (or trying to :)) in the newsgroup.

I am just arguing for the elimination of the morse code test for any United States amateur radio license. So do many citizens of the USA, both licensed radio amateurs and those not licensed in amateur radio.

I am quite sure (by example of years in here) that the PCTA cannot abide by any changes in the US amateur regulations that threaten their rank-status-privileges achieved through federally tested morse code ability.

I am also quite sure, again by example of years of PCTA statements in here, that the PCTA have no interest in any "promotion" or "betterment" of US amateur radio except for themselves. They show little care for any US citizens entering the hobby to do anything but exactly as they had to.

>A pitiful old erstwhile military comms operator, circa 1950s.

Chronologically old, of course. :-)

Somehow living a long life is anathema to the "forever young" PCTA.

"Leo" seems to ignore an entire career spent as a civilian as an electronics design engineer, very much a professional in terms of accepting monetary compensation for services rendered. :-)

>And his buddies aren't much
>better....just younger clones of the same persona.

Tsk, tsk, tsk...more dictatorial totalitarianism and provincial eliteness.

>Shut them down.

"Calm, rational, civil discourse." :-)

>Men without honor or intelligence or relevance are
>not worth anyones' time.

Only the anonymous are "with honor or intelligence or relevance." :-)

Dictatorial. Totalitarian. Elite.

>I've demonstrated some effective techniques
>that can be used to squelch QRM from these types of individuals - give
>'em a try.

"Calm rational civil discourse" in action. Become anonymous!
Harrass those who think differently! Force everyone to become PCTA
by ANY means! :-)

>Or, use silence as a tool - remove the audience, and adios boors.

"Hasta la vista, baby?" :-)

Sorry, Canadians can't run for Governor of California. Make a few movies
first and you, too, can become a "terminator." :-)

>Go for it! You don't see Len dealing with my posts anymore,
>do you? He can't - he's been disempowered! Surplussed again.
>Discharged. He can't argue with logic, or intellect, or reason, and
>when there's no possibility of personal attack - game over!

Apparently "Leo" is so anonymous that his sense of reality is also
anonymous.

>Plus, he knows that I know what he is.......he ain't fooling me!

This "Leo" is one sick puppy... :-)

>This is rec.radio.amateur.policy, not alt.hasbeen.flamefest - let's
>get these guys over to the appropriate forum, and get back to
>discussing the future of Amateur Radio!

"Leo" thinks the "future of amateur radio" lies in emulating the standards
and practices of the 1930s.

>Frankly, there are bigger
>issues than Code Testing to be discussed here - BPL could wipe out the
>hobby as we know it.......

Tsk, tsk, isn't the Brass Pounder League the heart and soul of amateur
radio of today?

>To paraphrase Nancy Reagan, "Just Say No To Thugs!"

NO, "Leo." :-)

They'll modify the rules so it fits their agenda. remember, the FCC
will do anything that can make them $$$$ for the US Treasury.

But, Alter Kocker, the points that I make are lucid and cogent.
Something that you seem incapable of achieving.

Unkike the drivel and vitriol that you contunally post. And, if you
cannot attack someone personally, you are impotent. Out of ammo.
Powerless. Where is it written that only comments from people that you
can find in QRZ or in a phone book are valid? A Vue Shtet
Geschreiber, Len?

You are not a Ham. Your opinions don't matter here. Game over. And,
who is to say that you are who you say you are? And would you be any
more real than the disembodied voice of idiocy in the newsgroup that
you are right now? Not likely. Who knows? Who cares.

As Descartes said, "I think, therefore I am". (You won't find him on
QRZ either :0) In this newsgroup, I'm as real as you are. Anytime
you wish, you can find me here. And, if you wish to attempt an
intelligent discussion some day, look no further.

And in honour of your fondness of Yiddish, I leave you with this wish:

Er Zol Vaksen Vi a Tsibeleh, Mit Dem Kop in Drerd.

And soon.

Not a very convincing arguement at all. All emotion and bluster - but
no fact. Your anger and lack of character is driving your comments,
not intelligence. What you cannot see does not exist - like a child
putting their hand over their eyes, and believing that they are now
alone. Now that's brilliant! ;)

But, you make quite an interesting spectacle of yourself when
dominated by superior intelligence and wit.

Please go on, Alter Kocker - you are making a complete fool of
yourself!

Uh huh. The BPL folk have important freinds at the FCC. Do the hams? If
so, why has this BPL thing gone this far?

Well, hopefully, they can still read their own rules and regulations there at the FCC. You see we are the authorized legal service. And BPL is the unlicensed part 15 activity. Part 15 devices must accept interference from the licensed users. Hams.

Course again, we are dealing with lawyers. So anything goes.

Not sure if you misunderstood ME or who it was Rene! I was posing a question of why Big Al has a fascination now for what seems another man who someone else pointed out was referred to as Pork Butt at some point in time. He - in a previous post - alluded to "you" - being a fag..... So, I was questioning HIS reasoning there, when it is HIM who seems to have the fascination with men - NOT YOU (Rene). So I TOO am wondering the same thing here.. I question no ones sexuality here except BIG ASS er I mean BIG AL's. I don't hear anyone else singing the Pork Butt song.. I bet his room is full of Porky the pig and Miss Piggy pictures and stuffed animals. He probably has a stuffed animal of each and rubs it on his dong too! The only wet dreams here are Big Ass er I mean Big AL doing Miss Piggy. Probably the only thing that will give him any attention sexually.

In the words of John L. and Paul M. "I get by, with a little help from
my friends".

There have always been concerns about the incestuous relationships
between regulators and the industries they regulate. These concerns
have intensified during the current administration.

Foxes and henhouses.

Happy trails,
Gary (net.yogi.bear)

And, my friend, who exactly are you? How do we know that you are who you say you are? Proof? Military history - were you really a marine? Current valid radio Licences held? you are not a Ham, so we can't check you on QRZ either. Who has verified you? Anyone can point to a large city phone book and claim to be someone. Has anyone talked to you on the air? Is there anyone who has even met you on this group?

I submit that you, Sir, are as anonymous as I. People know as many confirmed facts about me as they do about you! On the Internet, no one is necessarily who you think they are!

You, Sir, are an expert in the area of Usenet terrorism - for quite some time, you have freely attacked anyone who does not think the way you do. In fact, all you posted for the last three days were personal attacks!

To quote a famous idiot, is that what you would call a pot/kettle/black scenario?

THEY are the law. If they decide the public need for this kind of
broadband internet access outweighs the need of a few hams to
chit-chat...well...

Politics is quite an interesting thing. What's Right isn't always
clear-cut, and doesn't always go, even if it is.

We're probably talking about a majority of lawmakers who neither
understand radio nor the internet. They're likely to see, "guy with
freaky-ass radio equipment is stopping hundreds of my voters from
getting internet access, and this should be illegal." Or, worse, "Guy
who is giving me no money is interfering with organization that is
laying on the dough."

A united voice speaks better to the government, which is why ARRL is
asking for backing.

well, to get the record straight, the analogy I used was calling
you CW nazis... not much difference but I did want to get the
facts straight.... and the intolerant, non-bending, "do as
your told and shut" mentality pretty well makes it an accurate
analogy. Insulting? yes. Then again, I never take "do as your
told" agendas lightly, nor do I treat them with kid gloves
or ATTEMPT to spare thier feelings. "Lieing down and
taking it" isn't what this nation was ever, or is still about, and
neither is my day to day ways I deal with life, especially with
the "we don't like change, and that's what we had to do,
so you should to!" without any reasonable back up or factual
evidence why it SHOULD be so.

Get your facts straight. There are 300,000+ hams licensed to operate HF and another 300,000+ hams licensed in the VHF and higher only category. Note that BPL will also trash 6meters and 2meters.

Right now and under the new power level proposal, BPL must meet Part 15. This means that it legally cannot cause interference to any authorized or licensed radio service and must accept interference from any authorized or licensed radio service. Therefore any problems in BPL must be resolved on the BPL side under current regulations. It would require changes in both Part 15 and Part 97 to restrict operations around BPL areas. Plus don't forget the non-ham spectrum users. The FCC will have a heck of a time telling commercial AM radio, FM radio, and over-the-air TV broadcasters to shut down.

You can use scientific calculators but you must demonstrate that all memories are empty and that you have no equations programmed in. It would be a good idea to take your calculator manual and show them the page that describes how to erase all memories and equations and then do so right there so that they can observe.

If could be that in some cases, the VEs are unfamiliar with scientific calculators so that the only way they can be sure that you have nothing programmed is to limit it to simple calculators.

However, the test standards set up by the council do allow scientific calculators.

I've made no unfounded accusations against the FCC, merely pointed out the
following facts:

1) The FCC regulates all radio spectrum users and devices that may emit
incidental radio waves. Their job is to balance all requirements not attend
to the welfare of ham radio.
2) History has shown, by various documented actions on there part such as
reallocating spectrum to commercial users that hams don't necessarily have
priority.

Now I am not saying that the FCC should give us preference over all other
users. It was never their purpose. What I am saying is that any one who
thinks the FCC will "look out" for hams is overly optimistic or uninformed
of the overall scope of the FCCs job.

Therefore it is up to the amateur community to "squeak" whenever necessary.

Do keep in mind that finally some newspaper, under the Freedom of Information Act, finally did do a recount of all ballots in Florida. Some six months later, the results were published and showed the election results would have been unchanged. Naturally this was printed as a filler at the bottom of the last page of the paper. It was available somewhere on line, but it's been so long ago now that I now longer have the URL and it may have been taken on the site by now.

Yes, that's the question. If a currently legal amatuer radio operator could
shut down high speed internet access for a given area, is there any reason
the FCC couldn't change it's current regulations, and put in new
restrictions on amateur radio?

>Plus don't

I'm sure the FCC wouldn't restrict any of that. The TV networks, radio
networks and all the people who watch and listen won't let them.

There is absolutely nothing wrong with people being happy where they are.
But we get two different stories out of some people. Techs crying because
they aren't getting HF privileges and Techs not upgrading because they are
happy where they are. If the latter is the true case, then there is no need
to make any changes in any portion of the test requirements and NCI has no
reason to exist.

For some reason, this reminds me of the old joke by Rodney Dangerfield where he notes that when he was a kid, his parents tied a porkchop around his neck so that the dog would play with him. 8^)

Well interference caused by hams will be small potatoes compared to the
power that some of the commercial broadcasters are allowed to use. That
will compromise BPL over a much larger area than any ham station ever could.
If BPL ever comes to my area, I'm within a few hundred yards of some of

these broadcasters so the BPL users will never even notice my signal since they'll be constantly torn up by the commercial stuff.

I expect the BPLers would trap the broadcast frequencies. If the
interference from established broadcasters is still too high, they simply
won't offer service in that neighborhood.

But I don't think RF is the biggest problem for BPL. Overhead power lines
will only intercept a small percentage of the RF, and re-radiate at least
half of that. I think noise sources plugged directly into the power line
are going to cause far more problems.

Could very well be. If one of the neighbors has welding equipment, that can
really put a lot of noise onto an electrical line. It takes a lot of
filtering to keep that out of your radio and no doubt would do a good job of
interfering with the Internet signal.

Yep. Under current rules that matters. But if you read the fine print in some of the petition and comments by BPL advocates, that's something they'd like to see change. And if they can get such an idiotic scheme as BPL past the Final Five, that little detail should pose as no real show stopper....

HAW!

For some reason I am reminded of an unknown comedian who used to talk about how
bad his mother's cooking was:

"We had the only dog in the neighborhood that would beg at the table for
Bromo-Seltzer"

"In summer, there were usually bugs on the screen door to the kitchen. But our
bugs were on the inside, trying to get out!"

"I was 14 before I realized that pudding wasn't supposed to have bones in it"

Then there are the lightbulb jokes and the yomama jokes.

Do you think that a person can have only one writing style?

I agree that a person can have more than one writing style. In this case; however, Len would have to work exceedingly hard to destroy any semblance of writing ability. I believe he has too much of an ego for that.

I'm not sure that BPL will suffer so much at the hands of outside
interference. Remember, these are not analog systems, and will no

doubt be adaptive such that they can operate in noisy environments far better than any analog system. So while operating speeds may drop BPL may well go ahead and function acceptably sucnh that the end user won't realize it is being intefered with.

I don't know any Tech+'s or, for that matter, any hams who think like that, DICK. Here's an invitation:

If there is anyone, *anyone* at all on this newsgroup, who thinks they'd like to get on HF and will once the CW part of testing is done away with, then please submit your thoughts now. And, if there is anyone, *anyone* at all on this newsgroup who believes that they like the status of their class of license--in this case Tech/Tech+--and figures they'll stay at Tech+ because they like it and enjoy VHF to the exclusion of HF *until* they can get their HF privileges without CW testing, then please submit your thoughts now.

Dick, I am telling you right now before anyone posts a thing: I don't think you'll find more than a couple of folks who think like you state above. I don't think you'll even find two. Yet, your broad paintbrush sees *everyone* who is a Tech/Tech+ thinking like YOU think.

Brian:

Funny, I've not heard many arc welders on the air lately. Everyone must
have switched to MIG/TIG.

BTW, I've never claimed to have any particular skill at welding. I would
have to learn and be tested in this useful skill before I could effectively
employ it.

>operators capable of using code? What benefit does it offer? Not what it
>offers you, but what benefit does it offer to the ARS (here is your
>opportunity to show your position is not just self-serving)?

Dwight:

I've already answered that question many times, but the short form is that without code testing, there is no incentive for radio amateurs to learn the code at all. And, this is hardly self-serving, since, the last time I checked, I'm not the only licensed amateur radio operator in the United States.

>How are the
>goals and purposes of the ARS served by continued skill testing of this one
>operating mode? How will this (code skill testing) help to keep the ARS

>will this help move the ARS into the future (where we should be mainly
>focused)?

Retaining continued skill in Morse/CW has no negative effect on the development of technology in the future. That's an NCTA red herring.

Dwight:

Ah HA!!! So, the fact that amateur radio operators DO use CW *is*
relevant to the code testing debate, and the fact that that the other
radio services which don't, isn't! Thanks for finally clearing that up.

Dwight:

Well, that's quite a roundabout way of admitting that you don't know what you're talking about when you insist that other radio services which don't use Morse/CW have some relevance to the ARS. And since you can't logically support your position, it's easier for you to bail out. I understand. Just keep in mind that you've single-handedly demolished one of the NCTA's favourite arguments.

Dwight:

Yeah, in a way, you're right. In order to remove the usual NCTA spin placed on everything you post, I guess I do have to "twist" things in the right direction.

>If he
>doesn't want to discuss the issue seriously, he can discuss it with himself.

Sooo, you, like Kim, are going to admit defeat as well?

Kim says my posts lack intelligence. I guess, from her POV, that may be true. She obviously defines "intelligence" as being in agreement with her, or supporting whatever she says or does. I can, therefore, understand why she would want to avoid further debate with someone with whom she would have to make an effort to defend herself. I'll say one thing for Kim -- she knows how to look into a mirror and see a lost cause.

bzzzt

substituting your opinion for facts.
logic says that if this case is true, then all cases must be true; no ham
would learn ANY mode if not forced to be profeciency-tested on
it first.

Just don't take it personally and get vendictive and beligerant on the
air when the remove the testing.

well, if you listen to fellow PCTA types then the only conclusion
is that it IS a governement subsidation.... JUST like the farm subsidies
where the government artifically keeps the prices of food propped up
by buying all the excess crop that isn't sold at a given price instead
of letting the free market determine it.

In terms of ham radio, when the PCTA types say "it's the only
incentive to get people interested in CW, therefore we have to
make people learn it" you are essentially saying "if that product
(morse code) isn't purchased willingly at market price (as
to whether or not the individual is INTERESTED in learning it
in the first place) then the governement (FCC) will subsidize it
by purchasing the excess that doesn't sell (make the remainder
of the hams who don't want to learn it do so against thier will).

Pretty clear analogy.

If you look at it as a welfare program, then all the same it is
equally deserving of criticism.... if a system can't make it's own
way and sell itself and perpetuate itself, you never do it any
good by artificially keeping it alive, it'll never stand on it's own
two feet proverbially speaking.

The government, by the way, STILL buys insande amounts
of helium due to the strategic value of blimbs & derigables
and pumps it underground in northern texas. Yes, you read
that right.. WWI technology is being subsidized due to the
fact that it was ONCE useful, but since it's STILL on the
books as a government hand out, it's STILL purchased in
mass quantities

Larry,

Before you and Dick and others start calling this "the NCI agenda" ...
remember, NCI does NOT have any goal to do away with Morse
USE or to restrict it ... ONLY to eliminate the TEST requirement.

Dwight:

Your concern re: my "mental anguish," though unfounded, is noted and appreciated. I think that if you got to know me in person, you'd find me to be someone who is exceptionally free of "mental anguish." In fact, I would dare say that if there is any "mental anguish" in this forum, it would seem to have been expressed almost exclusively by the NCTA's, who, after all, started all this out of their anxiety at the prospect of being tested for entry-level (by that, I mean up to 20 WPM) proficiency in the Morse code as a part of the licensing process in the ARS. I, for one, do not have anxiety, and I am trying my best not to cause it.

Yeah, but.... TV is going High Definition and will be moving up out of
BPL range by the time it matters. AM BC is going digital and besides it
would be pretty easy to notch AM BC and FM BC bands out of BPL. Not so
easy to notch the several ham HF bands also and still keep BPL working
on track. And the notching might not be effective enough to work right
for hams.
I can't see assuming that the broadcasters won't make their own
deal and thus avoid their own confrontataions with the powers that be,
leaving the rest of us to swim alone in the shark-infested waters.

Our best hope is the opposition of other HF users- military, aviation, marine. Also the many low VHF users, some of whom are statewide police organizations, including the California and Missouri Highway Patrols. A few years ago there were several others. California has well over 5,000 mobile unit users and Missouri around 2000. That doesn't include base station nor repeater operations, which ups the count considerably and which would be even more adversely impacted. They can't move to a location away from the BPL noise as a mobile unit might.

Dick

5770. Re: 1/4 Wave Dipole

Newsgroup: rec.radio.amateur.policy

Certainly a half wave dipole is better than a short one, but if you use a tuner to make the short one work, you'd best be using ladder line. You have no idea how lossy coax will get with a 10 to 1 SWR ratio.

You must have misread what was said. If you understand what is going on, it is a no brainer and you don't have to memorize the question/answer books. I'm not sure what the question is exactly, but roughly one question states: if you have a 100 ohm pure resistance in series with a 50 ohm capacitive reactance, how do you express the impedance?

1) 50 + j100
2) 50 - j100
3) 100 + j50
4) 100 - j50

Come on, put any numbers in there. You don't have to figure anything.

73 from Rochester, NY

Too bad Google doesn't go back that far. It would be interesting to see who really "started all this" in these newsgroups. Of course, I suspect it was a member of the pro-code crowd - since the FCC started dropping code years ago, the no-code crowd would have had little reason to even bring the subject up. The pro-code crowd, on the other hand, started complaining before the FCC even changed the rules (the rumor of a rule change was enough).

There is no defeat to admit to, Larry. I presented the facts. You were unable to respond without twisting the truth. That pretty much ended the discussion. However, I'm more than willing to continue if you have something worthwhile to say. Of course, you don't really have to say anything intellegent, just something worthy of even a passing reply.

Relax. I wasn't talking about you. I was referring to what I said in the message you first responded to (how some people were doing so).

> What I am saying is that any one who thinks the FCC
> will "look out" for hams is overly optimistic or
> uninformed of the overall scope of the FCC's job.

Now it's my turn to object. I never suggested anything of the sort. Instead, I said the FCC has treated us (ham operators) fairly well over the years, which does suggest they do have our best interests in mind to some extent when they make rule changes. That's a long way from saying they're uniquely looking out for us.

But, again, why should there be "incentive" for hams to learn code? Notice that I'm not asking why a person would want to learn code on their own. Instead, I'm asking why there should be an effort on the part of the ARS or FCC to promote (boost, encourage, or push) this single operating mode (it's the only mode specifically skill tested)? You have yet to answer this question, and almost seem determined to avoid it.

> Retaining continued skill in Morse/CW has no negative
> effect on the development of technology in the future.
> That's an NCTA red herring.

I didn't say it had a negative effect, Larry. Instead, I asked you how this (code skill testing) will help to keep the ARS abreast of modern technology, insuring our continued value to others? I also asked how this (code skill testing) will help move the ARS into the future (where we should be mainly focused)? If you don't have an answer those questions, fine. Just don't attempt to twist what I said.

Google (http://groups.google.com) can be a revealing database when used to check up on a poster's history. Take for example the three entities who call themselves "Ed Norton," "Firebottle," and "Les Locklear," and who have an obsession with trashing someone named Lloyd Davies.

They have the following things in common: (1) they claim to know one another (Firebottle even claimed that Ed Norton hangs out with Les on weekends); (2) they all have AOL accounts; (3) they all have Google accounts, and (4) they all post through Keesler AFB from time to time.

Here are a few of the message IDs which are archived on Google and which contain the supporting information. You can retrieve the message itself by putting the message ID into the form on the advanced search page at Google. Once you have the message, click on "original format", and then take a careful look at the NNTP-Posting-Host header. It identifies the computer which had connected to Google's machines in order to make the post.

Keesler AFB often uses Ft McPherson's proxy server, and so it arises as the NNTP-Posting-Host in those cases. Here are a few messages posted by "Ed Norton" via the McPherson route (IP address 198.26.120.13):

Message-ID: <999c58d3.0302050507.235363ea@posting.google.com>
Message-ID: <999c58d3.0301220427.5ac785b1@posting.google.com>
Message-ID: <999c58d3.0208140417.417b9d96@posting.google.com>

And here is a message that "Ed Norton" posted directly from Keesler via IP address 131.22.200.54:

Message-ID: <999c58d3.0301270810.218de3f1@posting.google.com>

"Firebottle" likes the McPherson route too, as can be seen in:

Message-ID: <edaa3c2a.0301130628.26862bd@posting.google.com>
Message-ID: <edaa3c2a.0301130622.35a242d5@posting.google.com>
Message-ID: <edaa3c2a.0301150542.56b0ab39@posting.google.com>

And Les Locklear also posts through Keesler, as recorded in
Message-ID: <cbf9555c.0301140634.421d12b5@posting.google.com>

Les also connects to Google through Ft McPherson, as indicated in
Message-ID: <cbf9555c.0301131014.ea9f7a5@posting.google.com>

-...-

So what does this mean? The simplest explanation for the great
commonality among those three posters would be that they are all the
same person. If not, and the sock puppet operator is, as he claimed,
a friend of Les', then I'd say that with friends like that, Les
doesn't need any enemies.
-.-.-.-.-.-.

Hey! How about one of us sends these posts to the server to see what
happens? I think it would be a great way to see if Les/Firebottle/Norton and
his other sock puppets can be dealt with on one fell swoop.
Losing Les could hardly be considered a loss. The poor old man injects much
rhetoric but says so little anyway, so who would miss him?
I don't think Lloyd would....

Trying to twist what I said again, Larry? I never said anything about the other radio services having any relevance beyond the fact that many once used code (which was relevant to the ARS at the time) and their present lack of code use (which has relevance today). If you choose to ignore that past and present relevance, that's certainly your prerogative. However, by doing so, your position has simply lost touch with reality.

Don't pay them too much attention, Bruce. Neither JJ nor TwIT realizes they were NOT using a 1/4 wave dipole. If they had been, neither would have gotten a signal out of the back yard.

If the *antenna system* took a load and performed under the circumstances they describe, then both JJ and TwIT were loading the outer surface of the coax shield, and *that* was doing a major part of the radiating.

Of course when one side of a 1/4 wave dipole is attached to the braid of the coax with no decoupling, then the dipole is no longer a 1/4 wave dipole! What it becomes then depends entirely on the feedline length as well as other local factors. So then it will probably take some load, and maybe even load up to full supplied power, as JJ described. At that point it's a crap shoot-you don't know *what* you've got! For sure it ISN'T a 1/4 wave dipole! But the uninformed will think their "1/4 wave dipole" worked just fine!

If JJ had used a good isolation choke or 1:1 balun to decouple the coax from the 40 meter dipole at the feedpoint the tuner would have balked big time, and all that RF would have bounced around inside it, and made itself known quite loudly in the form of arcs. The KWM-2 finals might have sparked a bit, too.

Been there, done that, seen it happen, got the RF burns.

As I said earlier, they weren't using a 1/4 wave dipole, they just thought they were.

All this stuff is in the books.

Dick

Porkbutt is the ex-WB2OTK Rich Whiten out of Easley, South Carolina, USA.

73

Frank K3EKO

==========

Yes, Porkbutt IS the ex operator so named. He made himself infamous during his years as an overbearing, selfish, and overpowered Ham op on 14.313. Rich is not missed save by a few of his malingerers.
The band is a better place without him.

And Frankie, why can't you and Dan just get along? Yeah, Dan is garrulous, he is known to be a pain in the ass at times, but why promulgate it with your inane comments?
Do you take pleasure in needling Dan? Why?
Dan has his schedule full enough as it is...he has to deal with jammers and the likes of David Tolassi and Dumbass Donnie. There is no need for you, Frankie, to be tossing your two cents worth into the already confused foray.
Frankie...ever pull your dictionary off the shelf and read the definition of "maturity"? Perhaps you and Dan should both do so, but most of all, YOU should do so Frankie.

One thing still eludes me in all of this. Why the Hell are all of you guys so set on attacking Lloyd? He doesn't really upset the cart all that much, but yet you guys persist in attacking him at every turn. What gives? Is this a "pile-on" mentality whereby all you macho Ham geeks attack the weakest of the weak? Like sharks going for the scent of blood? Playground Bullies? Cowards? Pussies? Whassa matter? Lloyd doesn't use a pocket protector for his fifteen multi-colored ball-point pens? Doesn't wear his callsign on his baseball hat? Doesn't run around with six HT's on his belt? Doesn't have six antennas on his SUV?
Face it...look at all the posts allegedly made by Lloyd...there are many. You guys don't know the real Lloyd from the sock puppet Lloyds, nor do you care to find out, if you can.

Give Lloyd a break, whoever he is. It is beyond your areas of expertise to cull out the real Lloyd from the anonymous Lloyds.

Maybe one of these days you freaks can take off your aluminum helmets with the rubber duckies mounted on them and join the real world.

Frankie...stop messing with Dan. Change your diapers and move on....

How do you know? Without membership data, this is pure speculation on your
part.

>(Techs have stayed away in droves - in my view because
>they correctly have viewd ARRL's Morse policy as designed
>to keep them off of HF)

Again, pure speculation. Without membership data, it's impossible to know how
many members are of any license class. Even harder to discern is why some are
members and some aren't. For example, I have heard many Techs say things like:

- "$39 is too much money for the magazine"
- "The ARRL is a national organization, and my focus is local and regional"
- "QST is too technical"
- "QST isn't technical enough"
- "There's not enough stuff about what I'm interested in"

ARRL's Morse code test policy is derived from what members want. If enough nocodetest hams join and elect directors who support their views, the policy will change.
>
>I would, even giving the ARRL credit for the best of intentions,

I submit that any survey of NCI membership is unlikely to be
TRULY representative of the views of the majority of US hams.

>Personally, I'd like to see practical operating knowledge become part
>of the licence procedure.

There are a few questions about operating procedures in the US tests. I presume the Canadian tests are similar. But a new ham can get all those questions wrong and still pass the tests.

>Not for the sake of testing , or making the
>licence harder to get, or screening out the incompetent and
>unmotivated - but to ensure that when you do get the licence, you
>have an excellent idea what is required to actually use it. Like
>driving a car, for example - if folks got their licence based entirely
>on the written test, we might not all be reading this post right
>now.....:).

But if it's not actually part of the test, there's no guarantee that it will be learned.

In the bad old days, almost all hams started out listening to the amateur bands - if for no other reason than to get code practice! Many hams were experienced SWLs before they got licensed. Others "discovered" ham radio by hearing AM ham stations, back when it was common for broadcast receivers to have SW bands. So they had a lot of "listen time" before the test. That's a lot less prevalent today.

It is my understanding that in the UK, part of the licencing process is *mandatory* attendance and a passing grade at an approved training course. Doesn't matter if a prospective ham is a child or a grizzled graybeard witha Ph.D. in EE - the course is *required*.

How about this approach:

Two typical ham rigs are set up so that the operators of each one cannot see or hear each other. The rigs might be connected to dummy loads which are located adjacent to each other. (The idea is to permit a "contact" from one rig to the other, without putting much of a signal on the air). The testee and a VE sit at one rig, and another VE sits at the other. The testee is given a sealed envelope and a few minutes to get familiar with the operation of the rig. (The operating instructions for the rig would be available at any time).

When the actual test begins, the testee opens the sealed envelope and a timer is started. Inside the envelope are a set of instructions telling the testee to go to a specific frequency and call the VE at the other rig, make contact, and send the enclosed formal message. The VE at the other end has a similar sealed

envelope, but with a different message, which is to be received by the testee.

The idea is to test the actual radio operating skills of the testee under controlled conditions. There would be a time limit, too. (That's what the timer is for). The testee would have the choice of CW, voice or a digital mode for the test.

Time limits and exact instructions would vary with the mode and the class of license being tested. Higher class tests could have shorter time limits, longer messages, and more complicated instructions, such as having to change frequency at a certain point in the contact, having to pick the frequency from a list that includes "wrong choices", etc.

Scoring would be on the basis of mistakes. If a word in the messages is missing or misspelled, that's a mistake. If nonstandard procedure or phonetics are used, each deviation is a mistake. If the time limit is exceeded, each minute over the limit is a mistake. Exceed a certain number of mistakes and the test is failed. Asking for a repeat of a missed word would NOT be a mistake.

Typical exams (but not the exact exams themselves) would be available as study guides. Audiotapes of typical tests could be used for study as well.

Yes, it's a bit more complex than a straight code receiving test, and requires some equipment and two VEs to conduct it. (Perhaps the VE at the testee's position isn't really needed). But it could be done quite easily, and in such a way as to test real operating skills. The rigs used need not have lots of features, and QRP power levels would be more than adequate. Or a "rig simulator" that's really a gussied-up intercom could be used.

Is there any real reason such testing could not be done? Is it expecting too much that a prospective ham be able to pass such a test? I think not!

Waddya think?

And without Morse skill, that project had no practical use once the lab was
over. With Morse skill, it could have been a very useful transmitter.

There's a big difference between a lab experiment that is done purely as a
learning tool, and a practical project that not only helps someone learn *and*
results in a useful radio device.

Jim,

As in the US tests, there are indeed a few station operating questions on the Canadian exams. Our Basic exam consists of 100 questions, with a pass mark of 60%. You're right - it is possible to miss all of the operating questions (and more!) and walk out with a licence. I'm told that the test requirements have gone from very difficult (drawing schematics and essay-type questions back in the Fifties ans Sixties) to multiple choice questions and published question pools today. Perhaps because the equipment has evolved to the point where it is more of an appliance today (my HT sure is - select a frequency and talk! Not much radio theory needed there...)

Your proposed practical test is an excellent idea. It creates a real-world operating scenario to test the applicants' ability to operate a station, and would be a step in the right direction for ensuring that the new licencee has the skills, both theoretical and hands-on, to set up and properly use his or her radio equipment. Might increase the role of the local radio clubs too, as they could set up for both the hands on training and practice sessions to prepare folks for the tests.

A definite improvement over the status quo, in my opinion anyway!

And it's been all downhill since that. There are so many Winston Smiths
out there these days that a non-revisionist would be much harder to find.

What??? Make them *WORK* for a license??? Whadda ya think this is, the
old Soviet Union or something??

For a fact applicants would have to spend some time around active hams
first, instead of just on the CB band. It's probably no surorise that
so many of htem show up on ham radio using CB operating procedures and
lingo.

ARRL Bible, Book of Morse, Chapter 1, Verse 1
Don't worry about it, for it is writter;
And behold, for in the sky I saw a pale rider sat upon a pale horse. The
horse'e name is Codefree, and the rider's name is Capt. Carl.

And it will come to pass that Capt. Carl shall strik down the demon that is
BPL just as had done to the Godless Know-Coders.

As ye shall spend the rest of thy days in peace, without QRM or Morse Code.

If TwIT knew anything about my books she'd at least have
a clue to where to find a clue. I gave up on that long ago.

Maybe some newcomer reading here might have learned why
a 1/4 wave dipole is something hams don't try to use.
At least among those who understand why. If you want to
load your feedline and use it as part of the antenna,
fine. But one should be more careful about what you name it.

Exactly!

It used to be that unless you knew how to tune up a ham rig, it was very easy
to transmit out of band. Not a problem with 'modern' ham gear anymore.

Thanks!

This is not a new idea - I first proposed it here on rrap more than 5 years ago. It did not get a welcome reception from certain folks. They noted that no other radio service requires a practical operating exam for the license....

You might want to google up a certain nonamateur's response to the idea...

And while you're at it, you might like to look up my suggestion for replacing the code test with a Smith Chart test. The words "quillpenners" and "nochartists" should bring it right up.

So true, if Karl the nut is so great, he better hurry up and get busy on
striking down BPL.
It makes you wonder if the FCC in there plan to put BPL in place, saw Karl as
someone they could use to take the attention off of BPL and put it on CW.

"Virtually all??!?" You gotta be kidding, Dick!

In the seven years of its existence, NCI has gathered (at most) a few thousand members who are US hams - out of ~685,000 possibles, ~200,000 of whom are Technicians. And a lot of NCI members are neither newcomers nor Technicians.

FCC got how many comments about restructuring that were from Techs who were against the code test? No more than 1,000.

That's very true. But, those other radio services (military,
commercial) have other built-in means to ensure operator competency
and adherence to the rules - the employer has a great deal of control,
as it is his equipment that these licenced personnel operate.

>You might want to google up a certain nonamateur's response to the idea...

I did - and I'm not at all surprised - that gentleman stands as a true
beacon of light for xenophobes everywhere ;)

>
>And while you're at it, you might like to look up my suggestion for replacing
>the code test with a Smith Chart test. The words "quillpenners" and
>"nochartists" should bring it right up.

I did - interesting thread! Smith charts are an excellent way to
visualize the complex impedance relationships on antennas and lines -
I remember them from College, but haven't played around with them at
all since. My thoughts are that it's probably overkill for someone
who just wants to get in to the hobby and operate an 'appliance' type
rig with a Basic (or Technician, for your folks, I suppose...)
licence. But, it's a valid suggestion, much though went in to it, and
it is obviously well deserving of *intelligent* debate!.

I do not see how augmenting testing to encompass new technology, or to
'raise the bar' on licence testing qualifications in the interest of
creating better and more competent Amaueurs is quill-pen type
thinking. Would these folks prefer that we just give operating
privileges away for free? My view of current testing is that we're
already close enough to doing just that right now....just listen to a
novice Amateur on HF asking for a signal strength report while he's
working a repeater, and you'll see what I mean.... ;)

I personally don't mind at all if code testing is retained for HF
access - but it is becoming obvious from observing the rest of the
world that it will end someday. And probably soon. And that's OK

too. However, many other countries have chosen simply to drop CW entirely and hand over HF access to their licenced Amateurs, with no further requirements in place. I, for one, don't believe that the hobby is well served by this approach.

Hopefully, if and when the time comes, we'll have the option to put something in its place to truly improve Amateur Radio as an avocation.

Appreciate your reply!

>improve the situation or make it less crowded.

To a certain extent, the crowding is needed, because it shows that we need outr
bands and because it acts as an incentive to use more spectrum-efficient
methods.

If the 'phone bands weren't crowded, there'd be a lot less reason for hams to
use SSB instead of AM.

OK, fine. That means "somebody" has to be in charge, and make wideranging
decisions on who gets to use, say, PACTOR III and who doesn't.

That person or group isn't going to be very popular.
>

Echoes of the old Trunk Line system.

How "wide" are we talking about, anyway? Aren't all amateur HF data modes in
the non-phone/image subbands limited to less than 1 kHz bandwidth,, or
something like that?
>
>That would be rational - but our present system is anarchic, not rational.

>we'll do that though, so we'll just have to keep muddling along as best as
>we can.

In case you missed it, some time back ARRL petitioned FCC to "refarm" the
80/40/15 "Novice" subbands into more 'phone space. Some of us opposed that
move, and proposed something very different: Turn the "Novice" subbands into a
"developmental wilderness" where all sorts of modes would be allowed. Like
highspeed data, digital voice, whatever. And existing modes too. Tailor made
for PACTOR III.

I think its very funny, I can see it now, Captain Karl and his fruitcakes finally get HF Phone, then find out they cant talk to anyone unless they use CW.

I bet you are right!
Capt. Carl is just a sock-puppet for the broadband cartel. Now what will all
the "engineers" do when they can't hear shit on HF?

This is too funny.....

Kim is using a DXCC antenna IIRC. That isn't a quarter wave antenna. As for JJ, I suspect you are correct that the coax was radiating if he got a signal out. That might get a signal out, but it isn't a good thing at all.

Anyone care to take this one over to rraa to see what they have to say about it? There are some very good authorities over there.

The 40 meter dipole does have an HF 1:1 balun at the feedpoint.

> The KWM-2 finals might
>have sparked a bit, too.

Why? As far as the M-2 was concerned, it was seeing a good match, courtesy
of the tuner (that is one function the tuner performs in case you didn't
know). There was no arcing anywhere...have no idea what the swr was on the
feedline, but that is not the point. The point is, I did get a signal out
and made contacts, all with good readability on both ends. I have never
claimed this would make a good antenna or that one should operate such, just
proved that it can work to some extent. I thought you were smarter than
dannyboy but guess not.

5820. Some thoughtful comments from another forum on the code/nocode debate

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-27 23:51:32 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <8opdb.8103$yp6.195867@nnrp1.ptd.net>
Source record: 79228

I thought I'd forward the thoughtful comments below from
e-ham.net ... they say a LOT. (name/callsign omitted to
at least partially protect the innocent ...)

Carl - wk3c

****
For the last 25 years I have been in the US Coast Guard serving as
telecommunication technician. I am now a instructor at the same course.
I started off as a Morse Code operator in New Jersey. I grant you I
graduated at the near bottom of my Morse code class but still passed the 40
wpm requirement easily.
I also was sent to 9 months of antenna and radio theory and fundamental
classes. Upon graduation billions of years ago we all were required (simply
because the instructor was a Ham Extra Class type) to take the Morse code
and written tests. My class had 37 folks in it. On a windy Saturday in New
Jersey in winter 1978 we all went and took the Ham radio test and all by
simple virtue of having studied Morse and electronic theory and fundamentals
for almost a year left with our Extra licenses.
So in 1978 37 of us got "forced" into Ham radio and to this date - 22 still
are active (three of my class passed away, and I think one is in jail) but
the point is that we are still active running MARS stations, teaching in
service schools and running C2 systems for the DoD and doing so as Hams and
Coast Guard Instructors.
A few years ago the Coast Guard decided to do away with the Morse
requirement for us to learn as newbies - and for good reason - No one ever
used it for emergencies. Technology had developed a means to communicate
request for assistance via HF voice, FM, AM, TacSat. And the trusty
cellphone. I mean - in my opinion only a fool would trust sending a morse
code message that his ship was sinking - people wanted to call on a phone -
ask for help - and hear a warm friendly voice on the other side saying help
is on the way.
Two weeks ago 28 Coasties graduated from the DoD Signal center at Ft
Gordon - they had over a year of telecommunication training, satellite
uplink/downlink, antenna theory, computer ops, you name it - but what they
didn't have is any morse code. So how many of the last 3 classes that have
graduated have became Hams - ZERO. The reason is simple - they simply don't
see a need to study something that the US Govt (both the FCC and Coast Guard
and DoD) themselves have stated was not necessary.
One of the seaman that was asking me about how to become a ham told me that
to be forced to study the code to get a license was like a surgeon being
told he had to learn about Ether because that's how they use to do it back
in the civil war or a skipper having to learn how to pilot a steamboat
because for the longest time that was the naval tradition - and he has a
point - morse code was around and was an acceptable form of communication

when Steamers and biplanes were the norm but technology has changed greatly. But here it is today - the 21st Century and we are judging folk on their capabilities of being good Hams based on a 19th century art form.
Do I believe in tradition - of course -- but tradition shouldn't be the basis of restricting new technology or ideals.
Do I still use morse - yep, do I scream and yell at my new students because even though they can design an antenna system with a coke can and chewing gum that can talk to someone 1000 miles away but must be inadequate because they don't know morse code - No.
Bottom line is that there are a ton of great folks out there that would be a great benefit to Ham radio but just don't want to, or can't learn the code.
And just for the record - for the last two classes I asked "how many of you guys use CB radios" - to date the number is Zero. I had one girl in the telecommunication class raise her hand and ask "What's a CB?". so the argument that if we open the airwaves up to these fine Americans that have served for over a year learning the best in radio theory and fundamentals that they are suddenly going to invade your air space and start talking CB is just ridiculous.
Anyway . my two cents worth.

What a pile of crapola ...

Read "It Seems to Us" (Dave Sumner's editorial) in Oct. QST ...
Read my comments on BPL, either on the FCC ECFS or at
my personal web page at http://home.ptd.net/~wk3c.
Ask Ed Hare if I've been supporting him in the battle against BPL.

Also, I will be lobbying FCC OET and the Commissioners in the
coming weeks against BPL ... and I've been out in the Emmaus, PA
BPL "pilot" area with local reporters SHOWING them just how bad
BPL really is (after showing them what S0-S9 signals sound like on

a quiet band away from the BPL area so that when they see/hear the "wall to wall" S9+ "hash" from BPL they understand just how bad it really is.

So don't give me this "sock-puppet for the broadband cartel" crap.

And how do you expect CW to get through S9+ noise that's uniform
across all of the HF bands?

Bruce ... normally I simply ignore you, but it is time to tell you
directly that you are a total idiot.

If I gave you an hundred dollars cash and took you to a "rent/buy a clue
store" where clues were 5 cents each, you still wouldn't be able to get a
clue,
so why don't you just go back to CB and stop being such a world-class
AH amongst hams?

So you have a tuner that can match 50 ohms to 10K or higher
at the far end of a run of coax through a 1:1 balun???
I don't think so, JJ.

Again, whatever you thought you were doing, you were *not*
loading a 1/4 wave dipole. And that poor balun is surely toast.
And if it's not, that just proves that it wasn't in the load path and
you *were* loading up your feedline.

Believe whatever you wish. I know you can't load a 1/4 wave dipole
in that manner, and definitely not using coax feedline.
There isn't a tuner that I know of that will handle that
extreme a mismatch.
If it's taking load it isn't acting as a 1/4 wave dipole. THAT
was the initial point.

Hi Brian,
Thanks for the pointer. It appears that the BPL folks are going to cozy up to the 13KV or less power lines, with internet fiber back to the head end. This will be like your baby crib monitor on steroids. I was wondering how they pump the 2-80 MHz through the step down transformers. The literature mentioned a "high pass" filter around the transformer. I read this as a high voltage, low uF cap. The relatively high inductance "pole pigs" normally isolate households from noise stuff. If you think you have trouble with touch lamps in the neighborhood now, just wait until they add the "high pass" filters around the transformers. Never mind Ed Hare's attempts to show how the power lines along the street radiate. The very walls of your house, your christmas tree lights, etc. would radiate 2-80 MHz.

I remember back in the day when the early CATV providers used cheap braid shielding on their cable lines. Their Channel 18 was quite unusable in some localities due to 2 Meter Ham traffic. Of course, that interference was a two way street also. Imagine what my DXer friend down the street would do to the internet grid with his 10,000 watt erp into the BPL powerline/internet coupler. What a hoot!

Don't you love Commissioner Kat's remarks. Essentially: "Suspend the rules!, Let this fledgling technology flourish! Do they have a sound plan? H**l no! If we get down in the middle of the deployment of this

enterprise and there are problems we will solve them as we go! Just throw some tax payers money at it!" Hey, this fits right in with the current administration, the Tauzin, Dingell committee, etc. and besides, Commissioner Kat will be retired and sucking on a six figure lobbiest job by then. Be afraid, be very afraid. --Maybe some sort of "Homeland Defense" argument would be effective in beating this thing back.

73,
Clay N4AOX

Good example of the NEW CBHAMS. By the way why dont you call it a Rhombic, or
Sterba Curtain, or maybe even QUAD, or A Yagi, heck call it what you want, you
still dont have a CLUE.

Heres the solution to the BPL problem, it it makes you wonder why someone as done it yet.
First stop messing with FCC, these Clowns have all ready made up there minds. Look at the Present Dumbing Down, which as been brought to us VIA the FCC Morrons. So believe me they could care less about Hams. And stop waisting your time sending in your comments to the FCC. If anybody in there right mind thinks they care about 1800 comments you kidding yourself.
The solution is Simple, go to there Bosses, I dont mean anybody in the FCC I mean the FCCs Bosses. Tell them how you plan on Voting the next time out if this passes. Be sure and bring up Homeland Security in your comments. This is the only thing that will stop this. If you dont think so, remember the Head Man at the FCC recently got his hands slapped and told he would change another screw up he recently made.

I'll have to actually Google it if I can work up enough non-apathy
on the subject.

> Much of the rest of the world has no subbands-by-mode, and some folks
think the
> USA shouldn't have any, either. (I'm not one of 'em).

I'm totally in favor of an enactment that would create CW
'preserves', starting with the current allotments and then rationally
expanding them, even, if it would cool the jets of the more obnoxious
PCTA's. (not that that will happen.)

That aside, I'm rather disappointed that you couldn't name at least
one of the 'regular' NCTA's as being in favor of eliminating the CW bands.
Maybe one sticks out for ya...

BINGO, just as i've said many times.... the PCTA accuses the NCTA of doing all the crying and whimpering and flame war starting, but WHY would the NCTA have to do that since the tide of events in on thier side? It can only be logically concluded that the PCTA'rs were screaming against what they see as an injustice (in thier view of things).

Facts are, a person is FAR more likely to call a dealership and complain if he feels the car he just bought was a lemon, than to call it and compliment them
if the car they just bought was a real bargain and exceeded thier expectations.

The pro-code crowd, on the other hand, started complaining
> before the FCC even changed the rules (the rumor of a rule change was
> enough).
>

What's WORSE is that most of them won't debate anymore after starting the crying fits, they put the people on ignore that try to discuss the matter with them..... how's THAT for reasonable?

Just imagine how bad it's going to get when the last vestiges of it are removed entirely.

I'll admit stupidity if you can explain how and why that antenna worked as a quater wave dipole.

I already presented some fairly comprehensive data on why it wouldn't. That was pretty basic stuff.

That a quarter wave dipole antenna would work is fairly extraordinary.

Present your evidence and your theory/rationale.

>Carl - wk3c

Carl:

I've never referred to the no-code testing agenda as the NCI agenda.
The "NCI agenda" would seem to be to simply remove the requirement
for prospective HF-privileged licensees within the ARS to learn and
be tested at the entry-level in a useful communications skill of
proven value to radio operators serving a primarily backup role. Thus,
the NCTA and, by association, the NCI, merely panders to the lack
of motivation and initiative which is common to those who desire
valuable communications privileges without the need to make the
effort involved.

Dwight:

It was definitely the NCTA's who originated the code/no-code (testing) debate on Fidonet, then Usenet. At least, it was they who threw the first slings and arrows at the pro-coders (PCTA's) and making all the now famous accusations of us being politically-incorrect in every possible way, contributing to everything that is wrong in this world, and seeking to keep the ARS technically archaic. I was there from the beginning, so if you weren't, you'll just have to accept the word of those of us who were.

>
>
> There is no defeat to admit to, Larry. I presented the facts.

Dwight:

Which facts would those be? I haven't seen Fact #1 come out of you yet!

>You were
>unable to respond without twisting the truth.

What truth? You never spoke any "truth." You only presented typical, boiler-plate NCTA strawman arguments.

>That pretty much ended the discussion.

Due to your lack of ability to offer anything of value to the discussion.

>However, I'm more than willing to continue if you have something
>worthwhile to say.

Fine. Propose a topic, and we'll give it a try. However, I believe you've pretty much used up your quota of boilerplate NCTA red herring strawmen, so you'll now have to actually make an attempt to dredge up something original. Good luck.

>Of course, you don't really have to say anything
>intellegent, just something worthy of even a passing reply.

Now you're starting to imitate Kim's whine. You should consider watching that, it's a very bad habit to get into, if you're concerned about your future credibility.

>FCC to promote (boost, encourage, or push) this single operating mode (it's
>the only mode specifically skill tested)? You have yet to answer this
>question, and almost seem determined to avoid it.

Dwight:

I've also answered that question numerous times, but here it comes again:

The Morse/CW mode is the only mode which requires the operator to acquire a physical psychomotor skill in order to utilize that mode. Therefore, it makes sense to test for a prospective operator's ability to receive Morse code at some level, in order to ensure that this mode can continue to be effectively employed and it's benefits and advantages conferred upon the user. It's a fairly simple concept to understand, which makes one wonder why the NCTA's fail to grasp it.

>> Retaining continued skill in Morse/CW has no negative
>> effect on the development of technology in the future.
>> That's an NCTA red herring.

> I didn't say it had a negative effect, Larry. Instead, I asked you how
>this (code skill testing) will help to keep the ARS abreast of modern
>technology, insuring our continued value to others?

The above is a non-sequitur, since there is no need for use of the Morse/CW mode to "help keep the ARS abreast of modern technology...". Your statement is illogical and assumes facts not in evidence re: the negative effect of Morse/CW use on the development of other communications technologies within the ARS.

>I also asked how this
>(code skill testing) will help move the ARS into the future (where we should
>be mainly focused)?

Again, non-sequitur. This is a strawman argument offered in place of something more logical, well-reasoned, and relevant. There is no connection between Morse/CW testing or use and any possible deleterious effect on the development of other communications modes. This is merely, as previously stated, one of the NCTA's more famous but totally worthless "red herring" arguments.

>If you don't have an answer those questions, fine. Just
>don't attempt to twist what I said.

No need, you're doing that quite nicely yourself.

>>
Attention All Amateurs...
ARRL Rebukes FCC Commissioner's BPL-Related "Broadband Nirvana" Remarks
(Sep 25, 2003) -- The ARRL has strongly objected to FCC Commissioner
Kathleen Q. Abernathy's suggestion that Broadband over Power Line (BPL)
technology will contribute to what she described as "broadband Nirvana."
Addressing the United Powerline Council's annual conference September 22

recommended a combination of regulatory restraint and the elimination or
substantial modification of existing rules as steps along the "path to
Enlightenment." In a terse response faxed today on behalf of the
League's 155,000 members, ARRL Chief Executive Officer David Sumner,
K1ZZ, asserted that Abernathy overlooked some significant issues in her
Nirvana analogy.

YOU CAN EMAIL MISS ABERNATHY AT THE FOLLOWING ADDRESS AND I URGE EVERYONE TO
DO SO.

They don't "fail to grasp" what you're saying... they only point out the
fact
that the one has nothing to do with the other anymore. Yes, testing morse
code ensures that "it's benefits and advantages [are] conferred upon
the user", just like a contest of shuffleboard proves whether or not
the knowledge and sychomotor skills to play shuffleboard are inherint
within a person to play shuffleboard. The line of reasoning at this point
breaks down with all you PCTA people because you then try to make
the erroneous leap to the conclusion "therefore, it's necessary to continue
testing it for ham radio licenses."

Not many of your crowd seemed to have had a problem all through
the years for disabled people to have an exemption for high speed morse
code testing (if you had a physician's endorsement you didn't have to
prove you could send & receive morse code over 5wpm)... why did
none of you guys have the guts to stand up and say "well, the only
conclusion you can draw is that disabled & crippled people are not
real qualified hams" or "if you are disabled, you cannot ever be anything
more than a fake ham"? or how about "since the testing of morse code
is so necessary for ham radio, there should be NO exemptions for
people with hearing disorders because they can't possibly EVER show
the correct skills for being ham radio operators?"

You didn't, showing yet another error in PCTA logic. The only conclusion
a person can draw from this is that you subjectively and selectively apply

the requirements necessary for showing you have "the right stuff" to be a
ham,
and by doing show outright admit that it's more just a simple case of
personal choice and bias more than true, ground level basic needs.

AH, self fullfilling argument... by simply you saying so, it must be true.

Well, it just doesn't stand the light of reason to say that those opposing
the code testing were the first to raise hell when it was quite obvious that
the tide of events were going thier way. It just doesn't make sense. It
would
be that group of people who felt thier interests were being attacked that
naturally would want to raise debate about it and therefore, the law of
averages
says that some of those would be rather sharp, offensive and a little on the
dark side.

> Homeland Security in your comments. This is the
> only thing that will stop this. (snip)

It hasn't been done because it won't work, Bruce. First of all, we're (ham operators) only a speck on the political spectrum. Even if we all voted exactly the same (not very likely), we don't have enough numbers to effect elections in any significant way. On the national level, our numbers are about equal to the voting block of a single mid-sized city (in a country with hundreds of cities). On the local level, the hams in a single state are rarely enough to change an election there. Finally, we don't contribute any great amount of money to elections. In other words, taken all together, we don't have any political muscle to throw around.

As for the 1800 comments, have you read those comments? Most are opinions without solid facts. In other words, they lack substance. Only a very small number have anything firm to support the anti-BPL position. Compare that to the technical materials and studies provided by BPL supporters. I warned about this problem weeks ago. We're not giving the FCC enough to hang it's hat on to oppose BPL. If we want them to oppose BPL, we have to give them a solid reason to do so (a reason they can demonstrate to others).

As for homeland security, we're not doing a whole lot when it comes to homeland security. If you talk about that, are you prepared to explain what we're doing and who we're doing it for? What government agency do we work for while participating in homeland security activities? Who in the government is in charge of our homeland security operations? What are we specifically doing for homeland security?

As much as I'm opposed to BPL, I don't see how we can stop it at this point. We should have started our efforts two or three years ago. We should now have solid, preferably long term, studies to back up our claims. We

should have technical materials showing the real impact on specific frequencies and on specific radio services. I'm afraid it's too late to start all of this now.

Actually, once code testing is gone, the pro-testing crowd is not going to have much to say. I'm sure they're going to continue complaining about the new operators, but even that is going to have increasing irrelevance as their numbers continue to go down and new operator numbers continue to go up. Sadly, the pro-coders don't even seem to realize that all this is their own doing - their own behavior is responsible for their declining numbers (and perhaps, to some extent, even the removal of code testing). After talking to some of the pro-coders in this newsgroup, very few new operators are exactly inspired to continue talking to them (on the CW frequencies or elsewhere). By driving new operators away, they have insured their own decreasing numbers. And those decreasing numbers have seriously undermined support for code testing.

All good things.

>A few years ago the Coast Guard decided to do away with the Morse
>requirement for us to learn as newbies - and for good reason - No one ever
>used it for emergencies.

Morse Code was phased out of the maritime services so that the shipping companies would not have to staff their ships with skilled radio operators whose sole duties would be radio communications.

The maritime radio services exist only because ships need communications, not because the shipping companies or crews like to mess around with radios.

>Technology had developed a means to communicate

Not exactly an unbiased opinion...

IIRC, the last use of Morse for a maritime emergency was on December 31, 1997, involving MV Oak.

It should be noted that the newer systems have a much higher false alarm rate than the old manual Morse system.

>Two weeks ago 28 Coasties graduated from the DoD Signal center at Ft

>point - morse code was around and was an acceptable form of communication
>when Steamers and biplanes were the norm but technology has changed greatly.

Sure. But modern MDs don't use ether, steam has been largely replaced by diesel and gas turbines. Hams, however, still use Morse code extensively.

>But here it is today - the 21st Century and we are judging folk on their
>capabilities of being good Hams based on a 19th century art form.

Not true at all. Was there no use of Morse code in radio in the 20th century?

>Do I believe in tradition - of course -- but tradition shouldn't be the
>basis of restricting new technology or ideals.
>Do I still use morse - yep, do I scream and yell at my new students because

>they don't know morse code - No.
>Bottom line is that there are a ton of great folks out there that would be a
>great benefit to Ham radio but just don't want to, or can't learn the code.

Maybe. We've had a nocode ham license for 12+ years now - and yet none of the students wanted that license, huh? The satellite systems used for maritime distress, GPS, etc., aren't HF systems either.

>And just for the record - for the last two classes I asked "how many of you
>guys use CB radios" - to date the number is Zero. I had one girl in the

>that they are suddenly going to invade your air space and start talking CB
>is just ridiculous.

Sure - those folks.

>Anyway . my two cents worth.
>**********
>END QUOTE FROM E-HAM.NET
>
The writer ignores the biggest differences of those 25 years:

1) Back in '78, the students learned Morse Code as part of their CG training, so there was no other training needed for them to get Extra Class amateur licenses. Today, they would need to put in some of their own time, and a bit of effort, learning Morse at 5 wpm for that test.

2) There was no instructor today FORCING them to take the test. In fact, an instructor who tried to do that might be in trouble.

An amateur license is not a license to engage in commercial, maritime, military, broadcast, public safety or other nonamateur radio communications. It's a license to engage in amateur radio, using the amateur radio frequency allocations. And radio amateurs do use Morse code extensively.

Larry, as much as you want to claim victory in this debate, you haven't shown anything I've said to be untruthful or shown any facts I've presented to be inaccurate. You've tried to wiggle out from responding to those facts by offering irrelevant arguments and attempting to twist what I've said, but you've had no success with either tactic. At the same time, you've presented nothing solid to support code testing. In the end, you were not able to support your position or undermine my position. This is consistent with the overall code testing debate, which is exactly why code testing will eventually be eliminated in this country.

You didn't answer the question, Larry. I asked why why there should be an effort on the part of the ARS or FCC to promote (boost, encourage, or push) this single operating mode (CW) and you responded with garbage about "physical psychomotor skill." One has absolutely nothing to do with the other. There are skills needed to operate every mode, but those skills are self-taught. That is not the case with Morse code. When I pointed that out, you talked about an incentive to use CW (incentive by the ARS and FCC). At that point, I asked you why there should be an effort on the part of the ARS or FCC to promote this single operating mode. You brought this subject up, so please do answer the question - why should there be an effort on the part of the ARS or FCC to promote (boost, encourage, or push) this single operating mode (CW)?

> The above is a non-sequitur, since there is no need for use
> of the Morse/CW mode to "help keep the ARS abreast of

> assumes facts not in evidence re: the negative effect of
> Morse/CW use on the development of other communications
> technologies within the ARS.

If you're going to argue that Morse/CW has no negative effect on the efforts to help keep the ARS abreast of modern technology ("one of the NCTA's more famous but totally worthless "red herring" arguments," you said), it was not unreasonable for me to ask if CW has a positive effect on the efforts to help keep the ARS abreast of modern technology. You've answered my question (CW is irrelevant in that regard), so we can now move on.

Do you honestly think so? I disagree.... at least for a stretch of time,
anyway.
It IS human nature, depending on each man's capacity and staying power,
that is, outright fortitude, to eventually back off when they see that they
have
lost or are paddling up stream... and the time this takes, as I said,
depends
on the nature of each person's character... So, in the long run, I agree
with you;
they'll drop off in staggered two's and three's and dozens.. but for a while
it'll be pretty nasty and, quite frankly, since the issue will be over I
wouldn't see
much point in continueing to debate them. You only think they're getting
vicious and nasty NOW, just wait until they find thier security blanket has
been taken from them in the name of "grow up, you're not a child anymore".

>Sadly, the pro-coders don't even seem to realize that all this is their
> own doing - their own behavior is responsible for their declining numbers
> (and perhaps, to some extent, even the removal of code testing). After

> elsewhere). By driving new operators away, they have insured their own
> decreasing numbers. And those decreasing numbers have seriously undermined
> support for code testing.

And on that point i'll agree with you totally, 100%. Within this newsgroup,
as you
said, they not only do NOT inspire any sort of good will feeling or give
forth
the same warm fuzzy glow feeling that the new hams found or thought to have
found when they entered the community. One even posted "i'm appalled",
saying
he/she felt that what was SUPPOSE to have been a community of "friendly and
cooperative hams" had quite it's fair share of conflicting personalities and
ideology. It's very sad. If the old gaurd hasn't understood or seen by now
that

the mentality of "you're a child and stupid, you need to do what we say"
(and,
in so many words, this is exactly what the collective thinking of the PCTA
has
been) isn't going to attract new hams, then they also don't realize the
fundamental
error that is resident within them, and that is THIS... a continued agenda
such
that they uphold will do far more to destroy ham radio than any change in
testing requirements OR indirect problems (such as the current BPL
controversy)
will EVER do. If you don't believe me, just look at grey haired old white
men's
clubs and what is happening to them, the ones that ARE left that is.

I have tried my darndest do continue to post, for the benifit of the
undecideds
and the new hams that don't quite know where thier ideological compass
points
to in this hobby yet that the problem isn't the mode of operation itself. I
have
even stated that my first many QSL cards were covering contacts made in
CW. The newbies and undecides see now that the problem resides in the
PCTA, for the PCTA will not argue the true debate but attempt to spin
and twist it into something different... like many who support an erroneous
idea, they attemp at ever turn in the road to turn the argument on it's
axis and aim the very people instead of the issue. My honest feeling,
due to my personal beliefs about human beings and thier psychology,
is that the newbies will react (and have been doing so) toward this in a
negative way (as far as the PCTA crowd's interests) and, in so many
bloated but passionate words I have repeated just what you have.

The PCTA have themselves to blame.

My $.02 worth

WELL said Dwight.

If you look at the core error in WA8ULX's reasoning, as
you have pointed out, you'll see the core reason they
are losing the testing debate as well. It's really sad, the one
I agree with and the other I do not- that is to say, on the
one argument I am on the opposite side of the fence than
they but on the other we share sentiments... however,
as you pointed out, they refuse to change tactics and
keep with a warplan that is little more than just a static
in the ear of the FCC.

I myself came into the BPL story too late as well..
And when you consider the mega bucks i'm sure the
exploiters of the BPL are going to be willing to shell
out in terms of legal fights & retained lawyers,
political contributions *ahem*, etc., I think we
were are on the losing downhill end of it now. As you
said, things may have been different a long time ago
if a more factual, logical approach had been taken. The
same way they are losing the testing debate.

> you meant is......

No, I'm just very cautious about what I say, Dick. After years of writing in these newsgroups, I know any word, no matter how minor, can be blown out of proportion or even twisted to suggest something I never intended. Because of that, I'm very careful about the words I choose and the way those words are placed in a sentence. Of course, there is a benefit to the readers also - they can be assured I often mean exactly what I write.

For example, in that last sentence, the word "often" was added. With that, I'm suggesting the sentence above is not always the case. Of course, like others here, I do occasionally write things that are provocative or intended to pull someone's leg. However, that is usually obvious (out of character or not in my normal writing style) and rare (even more so if the topic is serious).

I suspect most others here, including you, do the same thing to some extent. However, because it is so consistent, perhaps my effort to do so is a little more obvious. Or perhaps it is obvious because I do it so poorly. Whatever the case, it serves me well.

Probably for the same reason loading up house plumbing will work, or loading up a coat hanger, or whatever. With a tuner, and with other apparatuses in use or not, coupling--whatever you want to call it--if a signal gets out, it gets out and that is all that counts *sometimes.*

I did that in the very message you replied to (quoted above). You're
point is? As you see, I talked about both the past and present code use by
other radio services and any relevance of that to the ARS. You tried to
twist the focus only to the present, ignoring anything about the past . Of
course, since both are relevant, it would be inaccurate to talk about one
(present code use) without the other (past code use). Not willing to
participate in such a discussion, I asked to to widen your focus to include
all of the relevant facts. You refused to do so, repeating your question
solely about the present. It was at that point, and only at that point, the
discussion fell apart. Again, I'm more than willing to continue the
discussion, but only if it is an honest discussion with all facts
considered. However, if you want to twist facts, you can do so on your own.

Y'know what? Speaking of words. The whole CW issue is defended (by many) as being the defense of some premier communication mode and that is usually enhanced by some submission of why the mode should be revered. However, aside from that--when the meat and potatoes of the argument (not debate) comes into play--the only defensible reasoning that is issued from there is that it "dumbs down" the ARS not to have the CW test, or that "lids" will come into the ARS, or that....well, you know them all.

I submit, again, that the hidden among the fervor for the appreciation of CW is the main idea that CW is a filter (no pun intended) to keep people out of the ARS. There's two reasons that's bunk. One: no one should be kept out of the ARS--let them get their license and stand or fail on their merit. Two: it's quite obvious that just because someone's passed a CW test--indeed beyond that: that someone operates CW at high speed even--it does nothing for proof of being a good ham, more technical ham, or intelligent ham.

Basically, when the "dumbed down" rhetoric is puked back up--we all know what the real reason is for the desire of CW testing to stay around: these folks believe in its power to filter out folks who act just like them.

I wouldn't be too sure of that, those old cable systems used 100%
analog technologies. If these BPL goobers use spread spectrum schemes
even a monster signal on a discrete frequency might not have much if
any interference effects on BPL.

> by then.

I normally stay away from "political politics" in this NG and stick to
the usual code test politics but I gotta state that as a lifetime
moderate Republican I've about had it with the current
administration's slash and burn tactics across the board. All of 'em,
environmental issues, the Iraq disaster, the incestuous cowboy
cronyism and now this BPL crap. Just for openers. I haven't voted for
a damned (wash my mouf') Democrat for forty years but I'm warming up
to the concept.

> Be afraid, be very afraid. --Maybe some sort of "Homeland
> Defense" argument would be effective in beating this thing back.

That angle might be our only shot at killing this thing. There are a
number of heavy-duty federal agencies using the HF spectrum for very
important purposes and those folks are quietly running studies and
tests on BPL and it's potential impact on their operations. We'll see.

There are so many holes, inaccuracies and downright lies in that
piece that it deserves no credibility whatever.

N2EY wrote
>
> The writer ignores the biggest differences of those 25 years:

Indeed those are all true, and consider this
little gem I just learned:

...even though the UK has dropped mandatory Morse testing, they are
still testing for it and retain 4 classes of licenses and they have
different call signs for each class so you can tell which station has a
CW license:

Class A has 12 wpm test and grants calls with M0 prefix

Class B licensees pass the same written test as Class A, but not CW,
and they now get full HF privileges. Their calls are M1 prefixes

Intermediate A (like Novice) has 5 wpm test and grants frequencies
above 144 MHz. They get calls with a prefix 2+Letter+0 (any letter
is possible)

Intermediate B has same written test as Intermediate A and no Morse.
They get call with a prefix 2+Letter+1.

Apparently many are still trying to get a call sign indicating they have
CW skills. (a rather low form of incentive licensing, but still
incentive licensing).

Both the NCVEC and NCI petitions incorrectly state that the UK has
terminated all Morse testing. This is not the case and their petition
suggests that the FCC go beyond what other administrations have done.

Looks like NCI and NCVEC are permeated with obfuscators and zealots
who will go to most any length to hide the truth, doesn't it?

That's because they generally have a very weak arguement without any real
pillars of facts to build on, so at every possible chance they get they
dodge and divert the topic of the conversation. I've had them go as far
as simply attack my spelling and grammer, for lack of anything better
to reply with.

BRAVO, well articulated.

I couldn't agree more; with each line of reasoning they use a very good
fact is brought up to disprove it and yet THEY devolve down to "go ahead,
present some facts and we'll discuss it"..and, well, this HAS been done,
they just ignore it.

So you're suggesting that 1978 era hams who didn't study Morse
specifically
to obtain an amateur license (ie., they were "forced" to learn it at
<20WPM in a military training program) are less desirable hams than
those today who learn 5WPM (QRS PSE) on "their own time and effort"?

Sunuvagun!

Good luck on this one now!

With all kind wishes,

That's an excellent and very admirable point... and it should continue as
a one of a person's many underlieing codes and guidelines to determining
his or her beliefs and concepts.

It's just sad that, in this case, there are multimillion dollar corporations
and
corrupt politicians fighting to get it done; there was no such resistance
when
it came to vanity call signs.

You know very well, or you should, that the ARRL send it a very comprehensive report on that subject. Both the initial comments and the latest round.

The ARRL is the best, and only, organization that can do a thing to help us against BPL at this time. Its all we have. And I think they are doing a fine job.

The FCC is staffed with a bunch of pro business lawyers. THAT IS THE PROBLEM. They don't have a clue of what they are doing.

If you want to change the thinking at the FCC. Then writting your congressman is the ONLY way to do it. Since the congress controls their purse strings.

The only other alternative would be to take it to court. Make use of the green peace bunch to sue for the destruction of a natural resource, the HF spectrum. etc.. Any port in a storm.

I would advise against a mass-mailing campaign to the Commissioner's
direct e-mail address.

The last time the FCC Commissioners got "mail-bombed" by hams
all it did was PO them.

They have staff and a comment/reply comment process ... which
have been used and will continue to be used.

ARRL has done an EXCELLENT job on their technical materials
and the video is a very compelling demonstration of just how bad
the interference really is.

We are just at the "Notice of Inquiry" stage now ... please don't
flame the FCC (and particularly the Commissioners) ... that will
just cause more harm than good.

I believe that NTIA will come down hard on our side on this.
The US Govt agencies that they represent have a LOT of HF
channels that they use and will want to protect ...

I'm not saying "shut up and don't comment" ... all I'm saying is
that the response needs to be measured, polite, and appropriate.

I'm quite sure there are many of us who share many of these thoughts.
In fact just last night I did a bit of preplanning on the letters
I plan to write to my three congresspersons, the local rep. and both
senators. It's gonna go something like...

"Folks, your base of support
out here in the hinterlands, upon which you MUST rely for any
future electoral success, is getting fed up with Republican
pandering to the big money interests to the virtual exclusion of
all else. Here's a very good example:::"

(quote the NPRM on BPL)

"The people who are behind this proposal know full well the extent
of the extreme PROVEN damage it will do to the vital High Frequency
and Low VHF radio spectrum, yet they insist on forcing it
onto all other users with no regard to its destructive effects.

Those effects even go to *very* seriously impacting
Public Safety communications here in our own state.

If this abomination is approved,
and we all know that it is FCC appointees of the current
administration who will see it through, you can be sure
that in the fall of 2004, the door will be opened to
the exit of large numbers of current supporters of this
and a number of other atrocities caused by extreme
Republican politics.
I haven't yet mentioned the horribly
expensive mess in Iraq (both in American lives and dollars).
The lack of in-depth advance planning is obvious.

Come on, folks. You don't *really* want us to vote Democratic,
do you? We sure don't want to!"

All the Demos really have to do is bring forth a candidate
who actually IS a candidate instead of the circus they've
shown so far.
That is, if such a candidate exists. I'm certainly not referring
to a carpetbagging Senator Hilarous from New York nor the rogue
ex-General who was fired from his NATO post-by a Democrat.

If not we may be in *big* trouble.

I have no confidence in Homeland Security causing anything to
happen that would work against the Big Money interests. Look at
what the current admin is doing on border security -- ignoring it!
- hoping against hope that posture will lead to a few more Hispanic
votes, which *ain't* gonna happen anyway. "Show and tell" won't fix
anything. They're still carrying weapons through airport security
gates. No telling what's in the air freight cargo bay.

Nope, $$$ rules. The most effective move would be to convince
the BPL proponents themselves that the plan is a money sink and
just another Iridium. But that won't happen as long as their
own techies and the FCC drones are pushing it fullspeedahead as
The Next Big Thing.
Just look at the economic activity in the tech-mfgr sector that
it'll bring-investors spent $22 billion on Iridium for nothing.
Republican/Techie Nirvana, as Commisar Abernathy said.

Can you imagine what a Carl Stevenson with no interest in
ham radio would be doing right now?

I agree that the ARRl is doing a decent job on this issue.

My fears regarding BPL go along these lines:

1) Business wants it. This means that the Republicans, in general, are for
it. It certainly means the FCC Powers-That-Be are for it.

2) Providing broadband access to as many as possible, as cheaply as
possible, is an issue that appels to Liberals. This means, in genral, that
the Democrats are for it.

3) The ARRL has a fairly small percentage (what is it, about 33%?) of
registered U.S. hams as members. This reduces its effectiveness.

4) I doubt that many politicians see BPL as a make-or-break issue for their ham constiuants. That is, how many hams would vote for (or against) someone based on votes relating to BPL? How much money (soft and hard dollars) would increase (decrease) solely based on votes on BPL? If my assumption is true, then the ham community's voice is further reduced in effectiveness.

5) The power companies have done a fine job of defining the issue in a way beneficial to themselves: Which is more important: Cheap, widespread access to broadband or a hobby playground for hams? To tell the truth, if that were the issue, I would support BPL.

6) The ham community's voice, weak enough already, is further reduced by fights over secondary issues. As is: BPL is good because it will serve the No-Coders right. I don't think the power companies could say it better.

To win this issue, we need to try to redefine the issue. We need to be saying:

Cheap Broadband for everyone is EXTREMELY important and we will do nothing to stop it. Here is how to best achieve this......

BPL, in addition to interfering with long time and important users of the HF spectrum, suffers from the following technical problems which makes it ineffective as a broadband solution ....

This is the only way to kill BPL, waisting time with the ARRL or The FCC is a lost cause.

I certainly agree, but added to other known issues it could well
be the defining factor.

How much money (soft and hard dollars) would
> increase (decrease) solely based on votes on BPL? If my assumption is true,

It would make a huge difference if BPL were the only or even the best
solution to that need. It is neither. It just happens to be the one
that was settled on by the power line people's techies.

I certainly agree. But you have to wonder just how effective any
alternate voice can be in the face of what we've already seen.

Dick

You know Jim, the more I ponder this paragraph, the more I think you may just have hit on an important way of grading the dedication (and therefore "value") of any given amateur licensee. Just by examining their involvement in the military, we can assign them a scientific "grade of merit" based on whether they got a free pass based on being forced to learn code or not forced.

Merit Zero (0.0): Draftee who was forced into the military and then was forced into Morse school.

Merit Zero-point-one (0.1): Draftee who was forced into the military and then volunteered for Morse school to get a cushy non-infantry job.

Merit One (1.0): Volunteer who joined the military by judicial suggestion ("Boy, come back for sentencing in 10 days, unless you're in the military by then, in which case the charges will be dropped.") but was forced into Morse school.

Merit One-point-one (1.1): Volunteer who joined the military by judicial suggestion ("Boy, come back for sentencing in 10 days, unless you're in the military by then, in which case the charges will be dropped.") and then volunteered for Morse school to get a cushy non-infantry job.

Merit Two (2.0): Volunteer who joined the military to avoid the draft and was forced into Morse school.

Merit Two-point-one (2.1): Volunteer who joined the military to avoid the draft and then volunteered for Morse school to get a cushy non-infantry job.

Merit Three (3.0): Volunteer who freely joined the military and then was forced into Morse school.

Merit Three-point-one (3.1): Volunteer who freely joined the military and then volunteered for Morse school to get a cush non-infantry job.

Merit Four (4.0): Person who declined to volunteer for the military service and learned Morse on his own time and effort. (Hello, Jim)

Merit Four-point-one (4.1): Person who fled the country to avoid military service and learned Morse on his own time and effort.

.... or maybe I've got that all bass-ackwards.

>>
>>"She"? How do you know Leo is female?
>
> How do you she isn't?

"Leo" is a male name. Unambiguous.

You have a history of calling people by the wrong gender as an insult, Len.
>
>>> Despite your pain with PREVIOUS screen names, I've never attempted
>>> to post anything without identifying myself.
>>
>>Yes, you have, Many of your posts do not contain anything that indicates who

>>you really are.
>
> There YOU are MISTAKEN.

No, I'm not.

You have made posts that include no identification other than your screen name.

>
> I've listed my employers in here

So what? Many of those references are decades old.

>and I've given names and callsigns to
> friends who are radio amateur licensees.

So? You could be one of them.

> My bylines in Ham Radio
> magazine carried the same USPS address I have now.

How do we know they are *your* bylines? We know that *someone* using the name "Leonard Anderson" wrote some articles 20-odd years ago for a now-defunct fanzine, but how do we know that *you* are that same "Leonard Anderson"?

> Since you won't accept any e-mail attachments from me,

Hold on a sec.

Some time back you sent me and a few others several *unsolicited* emails with large (megabyte) attachments and no explanation of what the attachments were. Rather than waste the dialup connection time required to download what could have been viruses, I chose to simply delete them.

You later described what was in the attachments. Nothing in those descriptions was relevant to "proving" your identity.

> the only
> recourse for you seems to be a lot of flame war ignition attempts and
> not bother to check anyone out.

What's to check out? I'm not claiming that you are a fake.

I'm simply pointing out that you *could be* a fake, and that every claim you make against Leo could also be made against you.
>
>>In fact, for all anyone really knows, you could be someone else who has

Amazing, NCI supposedly has all these Techno Whizzards just waiting to get on HF whenever the Code goes away.
I would think that all those Techno Whizzards would have a way all ready set up to be able to deal with BPL.
Come on Karl, get your Techno Gurus working on solving this problem so we can all share HF. Karl this would be an easy way to prove the No-Code Techs are worthy of HF.

Dick,

The best chance you would have to make your comments known would be to write the radio stations that were blotted out. Believe me, the broadcast companies have *much* deeper pockets than amateur operators. They would take a dim view of having their advertising dollars evaporate due to BPL cutting down their coverage. I am quite serious about this.

Dick Carroll mentioned that some AM broadcast stations were virtually obliterated in Allentown, Pa. In that case, everyone noticing interference on broadcast band (AM) stations should complain to the stations involved. Believe me, commercial broadcasting (especially since the FCC allowed a few powerful groups to buy up most of the broadcast stations) has much deeper pockets than amateurs and would likely not hesitate even a moment to bring lawyers and Congress into the mess. Don't complain as a ham operator, however; complain that you can't hear some particular programs from the station due to all of this "interference". Let 'em figure it out :)

I couldn't agree more; with each line of reasoning they use a very good fact is brought up to disprove it and yet THEY devolve down to "go ahead, present some facts and we'll discuss it"..and, well, this HAS been done, they just ignore it.

Oh Really? I brought up a very factual survey along with two other facts concerning CW and you refused to respond (other than to say you wouldn't respond) I asked you in another thread to explain a little bit about some of the new technology that you say you know so well (and we CW'ers don't) I'm *still* waiting for an answer on that one. It seems to me that when facts are presented, *you* are the very first one to run away and hide, not the other way around.

Here is a copy of the other thread -- I'll give you one more chance to answer:

"Clint" wrote in part ...

I only take the facts as they are and deduce a conclusion, rather than take a passion-filled idea intermixed with rage against opposition and launch a scathing attack devoid of everything necessary to warrant a good debate and argument to back up one's claims.

Excellent position, Clint. With that in mind, let's do some fact vs fiction debate.

On September 5, 2003 the Dakota Division Director released these survey results:

"Division members are divided on the Entry level license with slightly more of those replying saying that Morse Code should not be required for access to HF. That changes as we move to General and Extra. Nearly 70% say there should be a Morse requirement for Extra Class licensees."

This is very close to my position on Morse testing. I believe that some HF privileges on all bands should be granted to amateurs upon entry into the ARS, and that CW testing should be required for the higher licenses, General and Extra. It would seem that this survey in the Dakota Division indicates (as I have stated many times) that a majority of hams are not strictly against code testing -- 70% seem to think that there should be some testing for the highest class of license.

Add to this the fact that CW is the second most popular mode in the ARS and that groups like "FISTS" have nearly doubled in size *since* restructuring, and I think the picture becomes clear. The support for the NCTA is not as strong as their advocates would have us believe.

As I explained in my first paragraph, we simply don't have the numbers. Therefore, we're not going to be able to go around screaming we're a constituency with the hopes that alone will convince the FCC to support us. We're going to have to provide cold hard facts and I've seen little of that in the opinions I've read.

If the truth was known I could care less about the CW thing. The NO- CW thing is coming, no QUESTION about it. The No Written Test will follow. As I predicted when the 1st No-Code thing passed, there would 3 Steps to converting Ham Radio into CB. The 2nd step is almost here. The third step will follow shortly.
Good Luck CBplusser, I sure hope you enjoy your BPL HF privilages.

You can't really mean that! I do not support continuation of
the Morse test, but to suggest that we should just hand out
licenses to anyone regardless of demonstrated qualification
and let them "stand or fail on their merit" is the silliest
notion I have seen here yet.

That's like saying "let anyone get their drivers license
and stand or fail on their driving record" without having
passed a test.

And I applaud them for that effort (that's why I'm a member). However, it is one report in a pile of reports submitted by various companies, all showing exactly the opposite conclusion. The ARRL didn't give the FCC a thing to hang their hat on (a single "ah-ha" that proves those other reports wrong). Instead, it simply contradicts them.

> If you want to change the thinking at the FCC. Then writting

Let's turn that around at little, Arnie. I haven't seen Clint going around claiming to be superior. Instead, it is those in your circle claiming to be the superior hams. Other than code, what skills or knowledge of technology can be found in the pro-code crowd that cannot be found among the no-code crowd? From what I've seen, there are just as many highly skilled individuals in the no-code crowd as there are in the pro-code crowd, working in just as many professional careers. So, if there is no real difference between the two, why do those like yourself continue to support, or at least nor object to, the superior ham position of some in this newsgroup and elsewhere? The only possible answer I can see is that you also consider those like yourself to be superior hams.

The idea of using a random length of wire or the rain gutter is a time honored method of making an emergency/stealth or just plain experimental antenna. Tuners often make these antennas work - some ok, some not so well. And a large part of the not so good operation is when the tuner can't match the antenna.

My MFJ949 tuner manual has several lengths that the user is encouraged to avoid. According to them they are the worst possible line lengths:

160 meter dipole - 130 feet

80 meter dipole - 66 feet

40 meter dipole - 32 feet

If you do the calculations, you'll see what fractional wavelength those antennas are for the respective bands.

note: if anyone looks up the MFJ info, they will see a few other frequencies also on the "do not use" list. These are odd multiples of 1/4 wavelength, so I left them out of this discussion. But in general, its a related problem - odd multiples of 1/4 wave are not so hot to use.

They note that if you have trouble tuning an antenna on a frequency you want to use, you should shorten or lengthen the antenna by 1/8th wavelength. Then you should be able to get the tuner to match things up.

I imagine she said that within the context of this discussion, Hans (the removal of the code test, with the written tests intact). In that regard, "let them get their license and stand or fail on their merit." I happen to agree with her. We shouldn't be trying to exclude anyone just because of who or what they are (CB'ers or whatever). If they can pass the written tests and meet the citizenship laws, they should be allowed to participate. If they screw up later, that is the time to force them out.

No thanks necessary, Carl, you did a very good thing. I hope it has some
effect.

The code *test* debate pales in insignificance besides the threat of widespread
implementation of BPL. What good is any license or test for same if the bands
are so full of digital noise that they are mostly useless?

Also, having been without electricity for over 38 hours in the wake of
Hurricane Isabel, it seems to me that the electric energy utilities need to
focus more on their core business of providing juice and not further complicate
the operation and maintenance of their distribution systems by trying to use
them as a "broadband" data network.

(Hurricane Isabel was hardly a hurricane by the time it got here [Radnor Township] and damage other than electrical outages was very minimal. The electrical outages, however, were widespread and longlived.)

Don't hold yer breath, he's too full of nonsense to actually do anything serious like comment on BPL. But don't be too hard on Bruce, Carl - according to qrz.com, he's 305 years old.

>on the other hand, the way
>he comes across, we'd be better off if the FCC never, ever, heard from
>him.

AGREED! (shouting intentional)

The BPL battle is only beginning. Given Com, Abernathy's comments, the whole thing is obviously being driven more by misguided business interests and technically-ignorant investment than by sound engineering principles.

While we're on the subject, check out this bit of info:

"regarding the current BPL discussions you might well be interested to visit

http://www.bbc.co.uk/rd/pubs/whp/

where whp067 (meaning "White Paper" no 67) has just appeared providing a hell lot of the infos regarding the impacts BPL (or PLT or PLC as it is called in Europe) does have on HF reception in a typcal suburban or downtown area. The above web site also provides a bulk of audio files taken within such an area where BPL was / is in use. While the experiments were made using HF broadcast band reception (with those really big signals there...) it is all to easy and obvious what that would mean for any ham band reception (you can bet it's gonna be damn worse...)

Also, I put some files (both audio and video ones) on my web site at

http://www.qsl.net/dl5qe

regarding BPL (PLC, PLT) interferences.

The (British) Radiocommunacations Agency has a report on PLT measurements made at Crieff at:
http://www.radio.gov.uk/topics/research/topics/emc/edcrie_2.pdf

(thanks to G0CLV for the above)

73 es tnx for your anti-BPL efforts

Jim, N2EY

I'll tell you this Arnie. CW is far from dead. I played on CW ALL weekend. Some in the Alabama and Texas Qso parties. And then most of the day today on the Classic Exchange.

It was , as they say, wall to wall.

I guess what Im saying, and trying to be polite to the detractors (dummies to lazy to learn Morse code) is don't confuse them with the facts, the are to stupid to learn....and like I always like to say. Ya just cain't fix stupid.

Perhaps you think those that know/use Morse are superior to you. I don't
ever recall seeing anyone that advocates Morse saying they felt superior.

I know I don't feel that way. However I do feel those that don't play on CW
are missing a major part of the enjoyment they could get from having a
amateur license. But thats their loss not mine.

If you thank that is imparting a superior attitude, I say Dwight that you
have the problem, not us.

My best advice is add any post to your killfile that has
the words CW, PCTA, NCTA or code testing as a
subject.

The reason is you're probably tired of the PCTA trolling,
and quite frankly the only reason I hang with the debate
as long as I do is in the unlikely event I run into a fresh
mind with an angle I myself didn't think of, making
me rethink the whole debate. Unfortunately, however,
most of thier posts on *that* side of the argument
drive you further and further away from sympathizing
with it, especially when the condescending attitudes
start to vomit themselves up.

Other than that, you will find nice posts regarding
antennas, meeting on frequencies, and other
topics.

You and your ilk 'may have' had a point with the cw set at 20 and possibly
even at 13. But 5 wpm, a multiple guess, given by volunteer examiners
without all the strain and stress of a FCC session, can not be serious now.

All it comes across is as; Im just too lazy to take 2 weeks of ten minutes
a day to memorize the Morse characters. Good grief at 5 wpm you could copy
every third word and guess the test to completion.

Give it a rest.

Your EXACTLY right, those are my true feelings. I think its just perfect for all the No-Coders. Not only will they be able to get there No-Code Extra, and all of HF, but the beauty of it is, they will have so much noise to deal with, they will not have any one to talk to. What a just reward for all there WHINNING. I cant wait.

It's not the inductance.

One of the reasons Edison was against AC distribution was the very real
possibility that a step-down transformer could experience a
primary-to-secondary short that would put truly enormous voltages into your
house wiring. If the transformer also experienced a simultaneous open
secondary, the results could be disastrous. This is also why they don't use
autotransformers in the stepdown role.

The Ancient Ones at Westinghouse solved that one by inserting a grounded copper
shield between primary and secondary, so that any short had to go through the

screen. This screen also greatly reduces capacitive coupling of noise and other
junk through the transformer.

Bypass all that with a capacitor or filter network and the noise racket alone
will increase even if BPL is turned off. I don't wanna be around when a fault
or lightning hit occurs...

I think perhaps the cooler heads at FCC may be simply taking their time and
allowing limited testing so that:

a) the election is next year and there may be some changes up top

b) the opponents have maximum opportunity to make measurements and observations

c) the truly rotten business model for BPL kills the whole mess. (You think
those filters will be inexpensive? I don't, and they're just one component).

All this talk is really irrevelant. Why? Because once BPL is implemented,
ham radio is dead. All that will be remotly usable would be some V/Uhf,
that is not plagued by harmonics of the square waves.

Forget weak signal work. Its over.

Absolutely. I know I did and I know there's enough sense in this newsgroup
and across the ARS to see this, know it, and understand it for what it
really is. And, I think it probably applies to at least 1/2 of the pro-code
side.

Let's turn that around at little, Arnie. I haven't seen Clint going around claiming to be superior. instead, it is those in your circle claiming to be the superior hams. Other than code, what skills or knowledge of technology can be found in the pro-code crowd that cannot be found among the no-code crowd? From what I've seen, there are just as many highly skilled individuals in the no-code crowd as there are in the pro-code crowd, working in just as many professional careers. So, if there is no real difference between the two, why do those like yourself continue to support, or at least nor object to, the superior ham position of some in this newsgroup and elsewhere? The only possible answer I can see is that you also consider those like yourself to be superior hams.

On the contrary, Dwight. He has claimed in one of my threads that we are nothing more than knuckledraggers who don't understand modern technology. I listed some of the communications equipment I used at work and asked if he could explain the technology (no answer as of yet). Then I post a survey and two additional facts related to CW and he doesn't respond to that one either. For someone who says that we (CW types) are lost in a by-gone era and don't have any concept of modern communications technology, and that he bases all of his decisions on the facts, he doesn't seem to know a lot about modern communications technology or seem to think that facts contrary to his position are valid. That was my point. I'm not going to hold my breath waiting for him to respond -- nor will I accept his "I live by the facts" statement.

That's a pretty big brush you've got there, Clint. Please reference *any* post I've made where I said, or implied that I consider no-code hams as children. I'll wait here.

I'll tell you this Arnie. CW is far from dead. I played on CW ALL weekend. Some in the Alabama and Texas Qso parties. And then most of the day today on the Classic Exchange. It was, as they say, wall to wall. I guess what Im saying, and trying to be polite to the detractors (dummies to lazy to learn Morse code) is don't confuse them with the facts, the are to stupid to learn....and like I always like to say. Ya just cain't fix stupid.

I find it interesting, that when I present a set of facts that is contrary to the NCTA position, Clint decides that I'm not worth responding to. This after he says that he bases all of his decisions on the facts. You and I (and a lot of NCTA folks) know that CW is far from dead -- the numbers say just the opposite. But, I guess once you've dug yourself a hole, it can be hard to get out of sometimes.

Agreed, Carl. I suspect that by the end of this sad tale, many amateurs will think much better of the NTIA. Rather than mass emails, right now an interesting and very good experiment might be to do a little HF direction finding.Trace the "mystery signals" to their source. Write it up in a reasonably good fashion, and it might make for some more damning evidence against BPL.

Ryan,

That effort is already in the works ... NTIA is making their own measurements in BPL pilot areas ... I don't believe that they can help but come to the same conclusions as Ed Hare and I have as to the level of interference in the Emmaus, PA pilot area (Ed has visited other areas, I happen to live near the Emmaus pilot area).

We are not alone in the battle. (Thank God!)

No, he isn't. But that's about all the positive things I can say about
him. But I don't think he is exactly a shining example of a NCTA -
unless you agree with the pejoratives he like to call us.

Unless you happen to agree with them, of course. You don't think we're
N***'s do you???

So in the end, he bears a striking resemblance to some of the more
passionate CW'philes. Just a different side

Instead, it is those in your circle claiming to be

Do you really think so, Dwight? I would have to say that in principle
that the more knowledge a ham has, the more likely he or she will be a
superoir ham, but that goes for the whole spectrum of what we want a ham
to know, not just the Morse/CW part.

I have in the past objected to some of the more vitriolic posts by some
pro-coders.

I think you paint with too broad a brush.

Mike,

You don't have to DF ... you can clearly tell just by listening when
you're approaching, in, and leaving the BPL area ... and you can
see the couplers they use to get the signal around the transformers.

I suspect that Clint was actually referring indirectly to some of my posts as I have used the parent/child analogy and student/teacher analogy. However he likes to take this as meaning a superior and/or condescending attitude. He fails to be willing to admit that the less experienced should take the advice of the more experienced while they develop sufficient background to make informed choices. He has obviously missed my posts where I have clearly said that if I were interested in satellite work, I would go consult the most experienced satellite operator in our local club, who happens in this case to be a Technician. I am more than willing to respect his expertise. I would willingly, in this area, be the "child" or "student" in learning this activity. If I doubted what he told me about satellite work, I would first wait until I had equal experience before challenging his experience.

However, Clint wants to challenge the issue from a point of inexperience and feels that he should be taken seriously.

Hash: SHA1

The debate on BPL has raised a lot of important issues, and has
also generated a lot of comments by Internauts both with and without
ham licenses. Here's my opinion, FWIW.

It's not so simple as writing a check, but the FCC *is* being
manipulated by very powerful interests, and they're in a hurry. Not
only are they powerful because they have immense wealth, but they're
all the more powerful because they know that "Shrub" has presented
them an opportunity which won't come again in their life, and they are
determined to take every advantage of it in the short time left before
their pet goes back to his animal farm.

Bear with me for a moment: I'm moved to step back and take a look from
a wider view -

The most important thing that the Bush administration brought to
Washington is the belief, now widely held in the corporate boardrooms,
that rich people are entitled to enjoy robbing those less ruthless or
lucky. Lobbyists for both liberal and conservative causes have
complained bitterly about the arrogance and greed that the Republican
administration has allowed to fester inside the beltway: there is no
longer even the appearance of democracy, and it's starting to strain
the credulity of even so staunch a GOP stronghold as the religious
right.

- From Reagan's somnambulance, through the elder Bush's first term, and
continuing with the "Right Wing Revival" during the Clinton
administration, up to our current economic mess, the Republican Party

has been courting those with money by placing a rose between its teeth and a pistol in its pocket. The elder Bush and Newt Gingrich were, and their heirs are now, brazen and unashamed pimps for the idea that those that have shall get, and those that don't shall get screwed.

No sooner had they gained power in the House, then the GOP started to undo (and in a way that was very hard to reverse) every law, program, entitlement, and court decision which gave ordinary people a chance of living with a (little) dignity.

By the way, Newt wasn't just talking about the New Deal when he said "The great social experiment has failed" - he was talking about undoing centuries of progress, not just decades. The fact that his personal life was too personal for the spinmeisters to hide hasn't dimmed his enthusiasm for the good 'ol days: the theme of his book "Gettysburg", an fictional alternative-history of the battle, reveals an attitude that even Publishers Weekly commented on -

"The authors show thorough knowledge of the people, weapons, tactics and ambience of the Civil War, though their portrayals of historical figures like Lee, Meade, James Longstreet and Richard Ewell betray a certain bias (the Confederate men are noble and wise, the Union leaders hot-tempered and vindictive)."

In the "new" Republican view, it's not enough to move your business' assets overseas, or to "outsource" your back office tasks to third-world countries. It's not enough to (once again) utilize the dark-skinned to provide a lifestyle Nero would envy: the Old Elite feels it must squeeze the middle class until everyone with less than $1,000,000 of ready cash is living on rented land in a rented tent, owning nothing but a TV set so that The Massa can tell them how to vote.

But I digress: lets stop looking at the forest and go back to pecking at the BPL tree -

Frankly, if I was one of the old white men who run America, I'd be

hard-pressed to find a downside in BPL. Consider:

1. The Air Traffic Control radio system has needed a major overhaul for decades, and BPL will provide the FAA with a perfect reason to spend Billions to trade-in every navigational aid and radio in the country, because BPL operates on some of the same frequencies and will rendor most of the others unusable. Of course, the planes will have to upgrade as well, but airplane owners, as a class, have plenty of spare cash, and the fact that every other country and every other airline in the world will be forced to go along is just one of those "intangible benefits" that those with a certain lifestyle expect.

By the way, there will be a few dead, burnt bodies lying around while the FAA sells its new system to the Congress, but even that smell can't overpower the ordure of the Potomac at low tide, so you'd better get used to riding in the back of the airbus, paying more for tickets and maybe even thinking of flight insurance as a sensible precaution.

2. The power companies, made stodgy and unprofitable by such quant words as "service" and "obligation" and "customer", will enjoy a dramatic influx of badly-needed cash, which will arrive just in time to save them from having to admit their mistakes, reengineer their transmission systems, or (most importantly) actually work at alternative and/or renewable energy sources.

3. If they design the system well, BPL will enjoy a wealth of new options that even cable moguls don't have: a priceless data coral, with well-penned users whose choices will be limited to those favored by like-thinking men of means: every click will be tracked, every purchase planned, and every complaint laughed off. There won't be any "spam", since there won't be any advertising allowed into the system that the upper crust didn't choose to allow, and those whom exhibit anti-American sentiments or

question the wisdom of Those In Charge [tm] will soon find that everything they ever put into an email is available to their boss in an electronic blacklist.

Of course, any slander or complaints about these common-sense capitalist perquisites would be nipped in the bud, and the system will Protect Our Children [tm] by guiding their tiny minds into well-mapped impressions of the hard, hard life that the rich must suffer in order to provide the servants with the benefits we should be grateful we're able to beg for.

BPL is, as its advocates have explained, needed to counterbalance the critical shortage of war movies and of Father Knows Best reruns: it will put those airwaves that have been wasted on other nations' viewpoints and a few hobbyists' toys to more productive use. Your Betters have said so, and now if you're a Right-Thinking American, you will stop whining.

Capt Karl just hates to see his CBplussers loose out. He knows his constant complaining to the FCC has let them sneak this end. While Karl and his CBplusser Buddies, have been diverting the attention to giving all his CBplussers buddies a FREE RIDE.
I think what really makes Karl upset is the fact that he now knows he has been used by the FCC. The FCC played Karl like a fiddle.
Come on BPL let me be the first customer.
THANK GOD FOR BPL.. How about us starting a "No-Code BPL Group"?

>"physical psychomotor skill." One has absolutely nothing to do with the
>other. There are skills needed to operate every mode, but those skills are
>self-taught. That is not the case with Morse code.

Dwight:

Bingo. You finally stumbled on the truth. To be able to effectively employ the Morse/CW mode, prospective amateurs need to learn and gain reasonable proficiency in what is, for most, an unintuitive communications skill which requires a fairly challenging learning experience. The simple fact is that most prospective hams, like myself at one time, can't be bothered to undergo this learning experience, and find it easier to attempt to do away with the requirement instead.

>When I pointed that out,
>you talked about an incentive to use CW (incentive by the ARS and FCC). At

>operating mode (CW)?

In order to retain the ability of radio amateurs to USE this single operating mode, as already (repeatedly) explained.

>> The above is a non-sequitur, since there is no need for use
>> of the Morse/CW mode to "help keep the ARS abreast of
>> modern technology...". Your statement is illogical and
>> assumes facts not in evidence re: the negative effect of

>NCTA's more famous but totally worthless "red herring" arguments," you
>said), it was not unreasonable for me to ask if CW has a positive effect on
>the efforts to help keep the ARS abreast of modern technology.

It is a well-known fact that some of the simplest homebuilding/kitbuilding
projects available to radio amateurs are CW transmitters. As I can relate
from personal experience, building something that actually works and
gives one the ability to communicate on-the-air is a very motivating
learning experience, which usually leads to more advanced technical
involvement. Moreover, in a lot of the more uncommon modes used
by radio amateurs (EME, for instance), the Morse/CW mode is usually
the only type of modulation that works with any kind of useful reliability.
The value of Morse/CW is well-known to QRP enthusiasts, of course.

>You've
>answered my question (CW is irrelevant in that regard), so we can now move
>on.

I never said that, Dwight -- that's just your own self-serving "spin." And,
in the usual Usenet pattern, you lie, you lose.

Feel free to try again if and when you can get it right.

Dwight:

I don't whine or nag. I have a strong belief in my position re: code testing, and I am able to state it with clarity, passion, and conviction. You, Kim, and most of the NCTA appear to be limited to name-calling -- in addition to "whining" about well-spoken PCTA's such as myself. I believe you're long overdue for an examination of conscience.

>point is? As you see, I talked about both the past and present code use by
>other radio services and any relevance of that to the ARS. You tried to
>twist the focus only to the present, ignoring anything about the past .

Dwight:

This is quite entertaining. Here we have a card-carrying member of the NCTA, a group which has spent the last dozen years or so blaming us ever so politically incorrect PCTA's of keeping the ARS securely locked up in the "past," and now you're trying to make the "past" code use of non-amateur radio services somehow relevant to the present-day issue of continued code testing. Having memory problems?

>Of
>course, since both are relevant, it would be inaccurate to talk about one
>(present code use) without the other (past code use).

One of the leading arguments *against* code testing throughout this debate has always been that the use of (Morse) code has been deemed to be irrelevant in non-amateur radio services. Now, all of a sudden, Dwight Stewart ups and declares that just the opposite is true. Talk about your neck-snapping turns of events…

>Not willing to
>participate in such a discussion, I asked to to widen your focus to include
>all of the relevant facts.

I have given the "relevant facts" ad nauseum. I suggest you stop wasting my time and start Google-ing.

>You refused to do so, repeating your question
>solely about the present. It was at that point, and only at that point, the
>discussion fell apart.

The discussion fell apart because YOU had nothing new to offer; now you're trying to place the blame on me. Classic NCTA pattern.

>Again, I'm more than willing to continue the
>discussion, but only if it is an honest discussion with all facts
>considered. However, if you want to twist facts, you can do so on your own.

I haven't twisted a damn thing, Dwight, and you know it.

A learning experience that can be accomplished without a license exam (Boy Scouts routinely did it), therefore not an argument supporting a code testing requirement.

> In order to retain the ability of radio amateurs to USE this
> single operating mode, as already (repeatedly) explained.

You still haven't answered the question, Larry. I asked why there should be an effort on the part of the ARS or FCC to encourage (boost, promote, or push) this single operating mode (CW)? Or, to put it another way (and use your own words), why should the ARS or FCC make an attempt to "retain the ability of radio amateurs to USE this single operating mode?" Again, this operating mode offers nothing today beyond simple recreation. So I guess another point might be to ask why the ARS or FCC would require testing of all for a primarily recreational operating mode?

> It is a well-known fact that some of the simplest homebuilding/
> kitbuilding projects available to radio amateurs are CW
> transmitters. As I can relate from personal experience, (snip)

And I can relate from personal experience that electronics can be learned easily without building a CW transmitter. Ramsey alone has more than a dozen radio-related kits worthy of consideration by those seeking electronics skills. So, while building a CW transmitter is certainly worthwhile for those interested in CW, there are other avenues for those not interested in CW (a fact that undermines any association this may appear to have with a code testing requirement).

Larry posted this claim of superiority well more than twenty times in this newsgroup alone. He specifically and repeatedly claimed that those with code skills are "superior" to those without. He even used the word "inferior" to describe those without code skills. Throughout it all, none of the pro-code crowd raised a single objection to his position and several openly agreed with it.

Actually just about everyone who dislikes someone who insists on
forcing his uninformed opinion on them. especially where the person
cannot document any practical experience in that discipline.

> How do you she isn't?

"How do you she isn't?"...Gee, Lennie...One of those typos that
manifest when you are angry that you are always alleging...???

> >Yes, you have, Many of your posts do not contain anything that indicates who
> >you really are.
>
> There YOU are MISTAKEN.

No, he's not.

You have a screen name "Len of 21" that says absolutely nothing
about who you are. Who's Len? "21" of what?

In the last 24 hours alone you have posted several items with
absolutely no signature, nor even your "LHA"

> I've listed my employers in here...(SNIP)

Only one of which involved Amateur Radio, and that one is no
longer in business.

>...and I've given names and callsigns to friends who are radio
amateur >licensees.

And they have WHAT to so with YOUR licensure in Amateur Radio? I
am friends with people who are accomplished surgeons, but would you
want ME to cut on you?

> My bylines in Ham Radio
> magazine carried the same USPS address I have now.

Charles Manson has had the same address for even longer. So
what?

> Since you won't accept any e-mail attachments from me, the only
> recourse for you seems to be a lot of flame war ignition attempts and
> not bother to check anyone out.

Since you have proven yourself as untrustworthy and are a
documented liar, why would ANYone accept anything from you that has
the potential to introduce a virus?

> or (in some government districts) being investigated for harrassment.
>
> You have enough raw data to ascertain who is who. You don't want
> to. You would rather have your little jollies in here making your
> "opponents" look bad.

You are no one's "opponent", Lennie.

An "opponent" suggests that there is some potential for a
challenge.

The only "challenge" you pose is holding down the laughter to a
muffled roar. Your frequent lies, insinuations, insults and stories
are so easily derailed that the only "challenge" posed anymore is
directing some "newcomer" to review your past performance in this
forum.

> Start with KD6JG. Work on to W6MJN, then N2JTV.

Kinda like the Klan leader who points out he has several
"friends" who "happen to be black".

> Several more know me but there are over 600,000 licensed radio
> amateurs who are NOT in this newsgroup.

None that seem to want to join this forum and acknowledge it, it
seems.

> That's irrelevant to your little "cause" in this message, isn't it?

Again, we ask the question "what does THIER licensure have to do
with YOU"...???

> You want to "run" this newsgroup because you are here so much and
> spend so much time posting.

Whoa...POT/KETTLE/BLACK again, Lennie.

> >I'm not misdirecting. 'vshah101' did not give a name or callsign, even when

>
> Some individuals in here post against YOUR and PCTA viewpoints.
> That does not make them "anti-amateur."

"...against YOUR and PCTA viewpoints."...?!?!

That should have been "...against YOU and YOUR PCTA viewpoints.",
Lennie. But I guess you were too angry to recognize your faux pas.

> You think of yourself as "representing ALL of US amateur radio" through
> your expressed opinions in here.

You assert you know how Jim thinks. How arrogant.

> You don't. You "represent" only
> opinions and viewpoints of a small group of PCTAs who wish to be the
> elite of the US amateur radio community...one way or another.

And YOU represent...?!?! (Please be ready to provide some
evidence of election or employment as such...)

> You don't "own" US amateur radio and never did, therefore you don't have
> ANY judgement value about who is "anti-amateur" or even "pro-amateur."

With over 25 years of PRACTICAL experience in Amateur Radio, Jim
is far better placed to make an INFORMED opinion as to what may or may
not be "anti" or "pro" Amateur Radio.

So far YOUR experience adds up to a few hours of time spent
drafting articles of dubious originality, and obviously NOT directly
pertaining to PRACTICAL Amateur practice or application.

> >That's a fact, Jack ;-)
>
> Yes, Morrie, what I just wrote IS fact.

It's a fact you wrote it. The rest is dubious.

> >> The SUBJECT line of this thread is "1/4 Wave Dipoles."
> >
> >So? Subject lines never deterred you from going off in other directions.
>
> I posted IN this thread about dipoles. It's in Google if you've not
> saved it to your HD.

Uh huh.

This from a fellow who routinely chastises others about straying
from Amateur Radio related topics in this forum...Kindalike the 250+
line tirade that this was quoted from.

> YOU and some anonymous person want to use any thread as a
> character assassination venue so that you can "get even" for all the
> alleged "wrongs" committed against your radiogod personna.

There's no "character assassination" going on here that YOU don't
provide the basis for, Lennie.

You lie, mislead and antagonize anyone who dares engage you in
this forum.

THAT is a DOCUMENTED fact, Lennie.

> >You sound threatened and angry because someone has noticed your double

Uh huh. SURE. Where's "Meghz" when you need him, eh,
Lennie...???

> All you need to do is search Google for a lot of PCTA general harrassment
> such as from the hundreds of postings by "K4YZ" that go un-answered
> because that kind of posting only serves to make the harrasser happy.

The only thing "unanswered" to you, Lennie, is parts of my
service record...non of which is pertinent here, and only serves to
irritate YOU like a wet diaper...!
BWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA ! ! ! ! ! !!

> >> This whole newsgroup was created to discuss-debate-argue the code
> >> test issue.

>
> LEARN TO LIVE WITH THAT.

"Shouting" will not make your position any more valid, Lennie.

YOU frequently insist on chastising others for exercising thier
freedom of speech, Lennie, yet are quick to defend YOUR right to
discuss whatever YOU care to discuss when it is pointed out that it is
way off base from ANY Amateur Radio related discussion.

> >> It wasn't created for the sole amusement or daily guru column from

> for themselves AND to speak out?

The wonderous and absolutely transparent fact here is that Jim
routinely acknowledges and engages others CIVILLY who have opinions
that are counter to his.

It is also absolutely transparent that the one who needs to
engage in "character assassination" is you.

> YOU sit in judgement on everyone who does not consider morse code

Good thing you didn't, Lennie...That wudda made seven.

> I wonder what the FCC would call it if anyone there chanced to look in and
> read what the PCTA think, say, and do in here?

Since they have absolutely no jurisdiction in here, who cares?

And by the way...remember this from the front end of this
post...?!?!

> >Yes, you have, Many of your posts do not contain anything that indicates who
> >you really are.
>
> There YOU are MISTAKEN.

This post was itself unsigned. A review of your AOL "profile" of
"Len of 21" only reveals the response "male"...No name...no address,
and certainly no evidence of Amateur Radio licensure or experience.

Dang it Lennie...thanks once again for proving me right. You ARE
your own worst enemy.

Steve, K4YZ

I'm not talking about references or analogies, Clint. I'm talking about Larry's specific use of the word "superior" to describe those with code skills and the word "inferior" to describe those without such skills. Since none of the pro-code crowd objected to his position, I now trying to see how many others share the same opinions.

> You don't think we're N***'s do you???

Actually, I didn't even noticed Clint before four or five days ago. If he posted to this newsgroup prior to that, he was just another one of the many doing so. To be honest, I don't read most of the messages here. Unless the subject line catches my eye, I routinely highlight large groups of messages and mark them as read in my newsreader. Once that happens, I rarely see those messages again since my newsreader is set to not list messages I've read (or marked as read). The only way to see them again would be as a result in a newgroup search.

But, to answer your question, I don't agree with the use of pejoratives or uncomplimentary terms to describe anybody. Well, I might make an exception with Larry, but that would be a very rare exception. I strongly believe we have to get past this code debate and move on to more productive matters. Throwing around nasty remarks isn't going to help do that.

> (snip) I would have to say that in principle that the more
> knowledge a ham has, the more likely he or she will be
> a superoir ham, (snip)

Perhaps I'm too liberal for this discussion. I don't agree with the very concept of a superior ham. We're all individuals with unique skills, knowledge, and experience, to bring to the table, none of those superior or inferior to that offered by others.

First, other than ARRL, I'm not a card carrying member of any Amateur Radio group. Second, the opinions expressed by others don't apply to me and I certainly don't represent the views of others. So please stop trying to throw me into a group you dislike in an effort to dismiss what I have to say.

> One of the leading arguments *against* code testing

Which debate is that, Larry? The debates with me or the debates you've had with others. I've never said anything of the sorts in the debates you and I have had. My position has been consistent throughout those debates.

> I have given the "relevant facts" ad nauseum. (snip)

Nonsense.

I agree that it wouldn't be a difficult thing to find. I just think that if an amateur or group were to take an approach that didn't start out "I can hear the BPL intereference 60 miles away", it might have more impact.

Something like " On such and such date, a strong interference showed up on such and such bands. As the interference did not do away, a local group of amateurs and myself decided to trace the interference to it's source.

Then an outline of the DF method, and finally decribing the cause after finding it.

The point is that if people can easily trace out the interference from far away, it hammers home that it isn't really a local problem.

But that's exactly what was suggested. Your words, written in a clear
English declarative statement are unambiguous and say "NO ONE should
be kept out of the ARS" --- that's pretty much the same as saying
"NO ONE should be denied a drivers license".

Personally, I think persons who fail the test (or haven't taken a test)
SHOULD be kept out of the ARS.

And they're all demonstrably lying thru their teeth. Ya can drive a
Kenworth thru the holes in their explanations of how BPL "won't hurt
nobody".

> The ARRL didn't give the FCC a
> thing to hang their hat on (a single "ah-ha" that proves those other reports
> wrong). Instead, it simply contradicts them.

The ARRL submission is the *only* by-the-numbers engineering study on
record so far and it has the BPL proponents in a royal snit. They're
not brushing it off by any means, they're vigorously attacking it,
they know they have a battle on their hands so don't underestimate the
ARRL's ability to be a spoiler far out of proportion to it's political
and/or financial clout. David did take out Goliath, etc. Technical
submissions are not over either, the NTIA is gonna weigh in eventually
which could very well be the slam dunk BPL killer.

>
Exactly, more rounded, more experienced, more able to provide
communications under adverse conditions...etc.

But not suprerior. In fact when I get my Extra back in the 70s. I could
have opted for a 1X2 callsign at various points since then. I have not,
why is that? Im not one to put on airs, nor do I feel superior to others.

However, based on my experience and background, I feel I am qualified to
advise and suggest. The problem is folks now a days seem to think they know
it all, just because they passed a entry level exam. Oh well.

I believe all of us are more than willing to help the newcomers out. But I
refuse to be insulted and because I enjoy a mode they find 'useless'.

I didn't see that post. And I don't agree with it, if that is what was
said.

I don't read all the posts about code/no code. Its just the same over and
over.

Well, that wasn't my intent at all. I was merely pointing out that for
some folks, getting a license involves a lot of learning and the
related effort, while others already have the skills and knowledge.

You might want to talk to N0IMD about the concept.

You've left out a few categories:

- Person who earned their Extra amateur license years before they were eligible for military service

- Person whom the military would not accept for legitimate physical reasons (vision, etc.). Would any branch of the military accept a recruit with, say, 20/15 vision in one eye and 20/400 plus extreme myopia in the other?

Great post. I didn't vote last time... but I sure as shit will vote next year for ABBB. (Any Body But Bush).

Here's another lovely thought...

How about public service? You know... police, fire, EMT's. I guess everyone forgot that old nasty BPL will be going up to the mountain top to power repeaters and tower obstruction lamps.

Just a lovely place for a nice broadbanded RF noise source!

One of the reasons so many firemen will killed on 9/11 is that they did not receive the recall order on their talkies. Think how much better things will be with buildings installed with BPL!

I wonder if BPL will be allowed in radio quiet zones ???

hmmmm. ..Just a thought...

Then I'll answer it, Dwight. Because preparing for and passing Element 1
requires one to demonstrate a tad more effort and dedication than passing
written exams for which the Q & A pools are published. The 5-wpm is
sufficient enough of a challenge to require some serious studying effort
over approx two or three weeks, but not enough to discourage any individual
serious about earning HF privileges. For those who are not, the no-code
Technician licens is available. It's really quite simple.

And lets not forget those who enlisted in the military and selected a signal MOS long after code was pretty much dropped by the military. That would include just about all those who went to the Army's Signal School somewhere after about 1970 (over thirty years ago).

Code makes a person more experienced? If that is true, then a person who passed a code test yesterday is more experienced than a person who got his license ten years ago without knowing code, and more experienced than all those in the other radio services where code is not used. More rounded in what? Emergency communications? Moonbounce? Satellites? And if a person with code was truly more able to provide communications under adverse conditions, all radio services would still be relying on code. They aren't. In the end, these are all code myths.

I'll throw my two cents worth in, with the paranoid conspiracy twist (nobody's looking... are they??)

I won't get into the political aspect, for it's not a Democrat vs. Republican thing... they're both behind it, and complicit in the development of the fray. Yes, you may argue that the GOP is pro- big business, but after all, Al Gore invented the internet, so the Dems are just as guilty. Enough said... you can make any argument you want.

However, the 'New World Order' twist may have merit, if you want to get into the conspiracy big-brother thing. Consider the following: Have you tuned across the SW bands lately? How many diverse viewpoints do you hear? When I started as an SWL, I used to enjoy tuning into Radio Moscow, BBC, Radio Habana, VOA, etc. just to listen to, and usually chuckle at, the propaganda war that was being broadcast. Think back about how entertaining it was... I often wax nostalgic for those days. But the diversity of viewpoints was there. I wonder about now, though.

Check out 'World Radio Network' on the internet. Here's an international feed to over 70 stations all over the world... the same feed to all stations. Sure, they're different stations and languages, but the same message. Their 'motto' is "Global Voices, Diverse Views, One Station". One could fear that they really mean "Global Voices, One View, Diverse Stations". What better way to get the world ready for the New World Order than to transmit the one and only same message to the entire populous, in umpteen different languages. Wait a minute... isn't that VOA and BBC?

I'll close with a comment on SW broadcasts. Remember those QSL cards from far away places? Now days you hear Radio Korea, Radio Sweden, Voice of Viet Nam, or any of eight other stations from far away places, just to find out the broadcast is coming from our northern neighbor in New Brunswick. The Sackville site re-broadcasts for at least eleven foreign stations on over 40 frequencies. One more step to one voice, one world. Big Brother is on his way. No one's watching us, are they???

See how absurd some of this can sound? Let's stop being so serious and lighten up. Kick back and laugh about these banterings, but respect the thoughts of our fellow newsgroup posters. I don't mean to diminish the concern of BPL, because the bottom line it is a serious threat to our hobby, whether your into SWL or amateur radio. Rather than yell at one another and face off on who we're voting for in next election, put some energy into contacting you Congressmen and let them hear your voice. See the post by Jim, WA8SDF, a couple posts down. That's how we should be expending our energies.

> Scouts routinely did it), therefore not an argument supporting a code
> testing requirement.

That's where I first learned about the morse code. I had to learn it to get
a badge; upon learning it, I recieved a badge of achievement for haveing
done so. Had I not dont it, I STILL would have been allowed to be a boy
scout, they wouldn't have thrown me out NOR was learning the code
a requirement for joining in the first place. I just wouldn't have gotten
that particular acheivement badge had I not went through the morse
code studies.

I certainly think that by now newbies reading the various posts
on either side of the issue have at least some good starting points from
which to start making thier own conclusion. I wonder if, in retrospect,
the PCTA is proud of the way they've behaved and wonder if they
should not have taken a different tactic?

But simply without any convincing debate points or ideas other
than "do it, we all had to" and "do it because you are told to do
it, you are a <insert childish, juvenile personal attack here> if you
do not want to.

>You, Kim,
> and most of the NCTA appear to be limited to name-calling --

boy if that' isn't the pot calling the kettle black.

WHO is doing the name calling? it's not the NCTA group calling
the PCTA "lazy", "stupid", and an assortment of complex insults
using spurious comparisons.

Clint, that's something that I agree with you 110% on.

This type of attitude is not productive, and does nothing to further
the cause of the hobby.

Hoping that BPL will destroy Amateur Radio to spite the 'no coders' is
a nonsensical position to take. Sour grapes, I believe, is the term
for this type of thinking!

73, Leo

Oh, okay... well, I figured a reference would be enough, and t hough
I know i've seen the word superior itself used before, it just hasn't been
with as much frequency as that of a mere attitude showing same...
I think one is just as abhorrant as the other; what's more, it simply is
not conducive to an environment that makes the hobby more attractive
to new potential hams (and remarks have been made about that from
newbies in here)... on the one hand, you read things in the ham
radio books and mags about friendly and helpful communities in ham,
peaceful coexistence in the ranks, etc....

And THEN you come in here and read some PCTA'ers downing,
and I quote, "CBplussers", talking about "cobra HF radios" and using
deragotory remarks using the old 11 meter 10 codes, talking about
no code hf'ers, and one fellow even going so far as to recommend a
new license type call for those who advance after the morse code testing is
removed, so they can all be recognized by the old gaurd and "not
talk to them".. how childish can you get!

BZZZZZT! Wrong...

(1) I have never used the term "knuckledragger" at all, nor have I called
any
of you guys one....

(2) I have never said that you "don't understand modern technology". All
my comments have been to the effect that the PCTA crowd has an agenda
that doesn't reflect the change in times and modernization of
communications,
both of which is suppose to be reflected in the ham radio community... I
never said you didn't UNDERSTAND modern technology, I said you
guys weren't willing to allow the testing to "advance the hobby into the
modern age."

As far as your remarks about me ignoring your questions, I haven't,
I have simply answered the very same questions earlier to the others
in here that share your side of the debate.. and, quite frankly, met
with either diversion & dodging or personal attacks ultimately against
me. Why repeat the same thing over and over, ad naseum? After
the same thing is repeated about 5 times in a NG, it's for no other
purpose than to pump up one's own pride or to flame.

If you're going to quote me, I will forever follow and set the record
straight. Go mischaracterize somebody else, not me.

You're either a flamer or one who simply doesn't read many posts. I have repeated over and over and over that I like CW and my first several QSL cards were from CW contacts. My objections are to the testing of this mode (short answer, anyway).

It's amazing how very few things get to and reach people on your side of the argument. I don't know how many times i've had to either defend my position on that regard, or defend the NCTA's position that it simply wants to remove CW testing, not CW... But I can't possibly believe this charge is genuine anyway, I think it's a diversion or a dodge because it's quite a concept EASY to understand, it just isn't being *heard*.

She DID.. she articulated one of thier unspoken doctrines exactly.
It was what I meant by overtones of superiority as well (in addition to).

Need more? What about thier constant use of the term "CBplusser" and
so forth... I don't know if THEY have kept up to date on ham
radio violation records, but the vast majority of code & rule violaters are
hams who've been in the hobby for many many years, have advanced licenses
(advanced, extra) and thus have passed morse code testing. The hams I
have met personally that came out of 11 meters were the best hams I ever
met. WHY? Because they KNEW where they came from, how nice it is
up here, and have thus a respect for the advancement into a more
serious hobby.

The foulest mouths i've ever heard were on 75 meters ssb, and one ham
who's call I won't mention was denied advancement by hollingsworth HIMSELF
(you can look it up on ARRL records).. he lived at the time in conroe,
texas....
he use to get just slobbering drunk on the radio and really raise hell;
cussing,
insulting, playing music, everything. He passed the code requirements and
written exam to advance to an even higher license, but recieved a letter
from Hollingworth saying "you are not being given your upgrade, and
furthermore, never will until I recieve a written letter from you explaining
why you feel you DESERVE one."

THAT ham was a long time veteran ham who had already passed a
CW test. Therefore, any argument brought up that CW testing is
a "yahoo filter" as they call it is wrong. It doesn't stop any such thing.
Like you and kim, I feel it's a "good old boy club" sydrome, of you will.
They just don't like these "new people"... "we don't like thier kind
here... they're not like us!"

It's like taking off your nose to spite your face... I love this hobby,
it's a blast; it has so many avenues to pursue and so many different
ways to enjoy it. I even like it because it adds to my shortwave
listening pleasure!

Why wish it destroyed? How horrible! The very reason I state the
feelings I have to the controversial issues that are posted is because
I feel, ultimately, that I would like to see as many potential hams
come into this hobby as possible.

I think a lot of people are constantly worried about the
low calibur class of people that would flood the hobby; some, I think,
are people that simply don't want just anybody coming into the hobby,
but would rather see a small slice of the population that meets thier
criteria join and nobody else. Both are negative for ham radio, because
i'm sad to say, the first group I mentioned still wouldn't be willing to
try to pass a written test and probably wouldn't be able to; as for
the second group of potential hams I listed, well, there just won't
be enough of them to keep ham alive.

What do you have if you allow ham radio to stagnate? And leo,
of this i'm serious.... you have a hobby that loses what little
clout it has with the FCC because of DROPPING membership,
and thus, we'll see MORE of our bands taken away that are
above 30 megs (I am STILL pissed off that we lost 220! And
I understand that the U.P.S., that petitioned successfully to
steal 220-222 megaherts away from the hams, don't even
use it anymore!)

God, let's work together and keep this going.
You and I and many people in here may have our differences,
but we're both ham operators and enjoy our hobby.

Hell, leo, meet me on HF sometime and we'll have a ball.

one of the two factions fighting over the code testing issue.

PCTA = Pro Code Testing Agenda ...
NCTA = No Code Test Agenda

The former wants to continue testing mores code
profeciency as a means of judging whether or not
you can recieve a ham radio license.

The latter want to remove the last vestiges of
morse code testing, the 5 wmp code test.

Anything past that is debatable, as to what they
really want or believe, but those are the basics.

Same here - I started out listening to shortwave too, and had this
urge to go further with it, to talk back to the DX...it still amazes
me!
>
>Why wish it destroyed? How horrible! The very reason I state the

Thinking such as our WA8 friend displays is not going to do the hobby
any good at all. If the regulators get the idea that this isn't
important to us, and with the pressure that the power companies are
putting on them, it might just happen...
>
>I think a lot of people are constantly worried about the

Both sides of the argument seem to share the desire to bring in new people to the hobby. Quality of the new operator, though, is a major concern - I really don't believe that the standards up here are tight enough right now (theoretical testing, forgetting the Code part for a moment...) - as I mentioned, I had a licence, a bunch of radio stuff that I bought at hamfests and hooked up - and no real idea what to do next. Some feel that CW is the answer - some want to see more theory. All (with some exceptions ;)) love the hobby as much as we do, maybe more, and want to preserve and protect it. Explains why some of the discussions are so - uh - passionate....

>

That is unfortunate indeed, and demonstrates the power of industry. We still have the 220 MHz band up here, Amateur exclusive - not sure if that will change, but it does highlight what can happen if we don;t work together as a team. Big business has great influence over government up here - and I suspect there too!

So, if you still have your 220 rig, come on up and visit - it's still good here!

>
>God, let's work together and keep this going.

Fully agreed - we got off to a bit of a bad start (!), but it ends here.....

>
>Hell, leo, meet me on HF sometime and we'll have a ball.

Deal. You know, if we can work things out this calmly, there just might be hope yet! ;) I think that, in many ways, you and I are coming from the same place!

Now, if we can all just focus on some of the things that threaten the hobby...there's a hell of a lot of work to do!

Carl, you've noted that we should stick together on this one.

Perhaps "we" doesn't include Dick?

There was no insult toward you in his post, and I would note that he posted the link to the article, which no doubt he read, and no doubt saw that you were a part of the article.

If we are to get together and fight this thing, it might be worth pointing out that not only should those who support Morse testing try to get along with those who don't - but the opposite is also true.

OK, Hans. I forgot how the pholks like you need such phucking (HansTM)
pictures drawn for them. Here you go:

No one should be kept out of the ARS who is willing to meet the requirements
that are in current use at the time they begin entry into the service/hobby.
And the whole damned comment as a defense against the idea of those who
believe CW testing is a great way to filter out people from the ARS. Quit
being so stupid.

That's a rather lofty goal, Mike, when considering that folks like DICKhead, Larry, and lately, you, act the way you do. Think about it. Most of the people to whom sheer disrespect is aimed at are the folks that have no problem at all with those of you who love, appreciate and admire CW as a mode and even the fact that you wish it to remain as a part of the test requirement. But the lack of tolerance displayed by people such as DICKhead, Larry, you, Dan/W4whatever, and others is overwhelmingly despicable and beyond being able to "join" together for the cause. The only common ground that may be found is that we are all amateurs. And, I doubt you'll even admit that.

At any rate, what I'm saying is, don't look for agreement, pats on the back, or a joining of the hands. The behaviors displayed by folks like you, et al, make me quite untrusting of you, and not particularly interested in your thoughts--whether they be for or against the good of amateur radio. I don't care about amateur radio when I think of people like you being in it. I don't speak for Carl; and I'm probably being a lot more blunt than he would be. But, understand, when it comes to tolerance of you guys--how can you possibly think there'd be any? Any at all?

It's not a liberal or a conservative concept. It's just a matter of what a person inherently likes. In all my pursuits, I like a certain amount of panache in those around me. I like hard working, reasonably skilled people on my hockey team, I like my friends to be hard working, reasonably smart and witty, and I like the idea of the ARS having some sort of standard. Others obviously disagree.

I'm not going to force my opinions on anyone, but by gum, I'll make them known.

Well, Carl, I merely passed on the cut and pasted article which
INCLUDED your involvement. I didn't even delete the comment urging hams
to write the FCC nor the URL to do so, altho I, too, think it might not
be a good idea at this point.
Don't you think that I could have cut
you out if I had wanted to downplay your involvement? Why should
I do something like that? Unlike you, I don't believe you have a
^totally* evil agenda just because we don't agree on the Morse code
testing issue.
If it's thanks and praise you want, then
THANK YOU and CARL BE PRAISED for fighting BPL. At least
this time it's a noble cause.

My thought is that it's looking more and more like FCC has already
made up their minds, or maybe more accurately had their minds made up
for them. In that case, nothing short of Congressional action to
overturn their action will stave it off.

That might prove a real problem given who is lobbying whom these days.

Leo, I don't want to see *anything* destroy, or even further damage,
ham radio. That includes lowering the licensing standards so much
that the license is virtually given to anyone and everyone who
even the most mild and fleeting interest. History has clearly
shown where that leads.

You can't take this stuff too seriously, Clint. Most of it is just the wail of ill-mannered malcontents. These fools are convinced others agree with them, when, in reality, they are a pitiful minority in a community filled with fine, outstanding, people. Their own words condemn them to isolation. All you have to do is point those words out to others and explain why they're wrong. The rest of the community will make their own judgments.

Okay, now all you have to do is show where all that (demonstrated effort, challenge, earning privileges, a two to three week study effort, and so on) is listed in the FCC rules, or furthers the goals and purposes of the ARS. These are exams for a recreational activity with some serious underpinnings. You seem to want to turn those exams into a litmus test form of torture focused mainly on CW.

By the way, didn't you openly oppose the across the board 5 wpm code exam? If so, then why now is it suddenly "sufficient enough of a challenge?"

Isn't it amazing how unaware you are? Millions of people with no CW/code skills have been using HF for decades. Of course, none of them (CB'ers) are members of the licensed ham radio community. Instead, a couple hundred thousand Technicians did the right thing and "earned" a license to join the ARS, all without being offered even the basic HF operating privileges of an unlicensed CB'er.

Because it's not a skill that most people will have learned elsewhere.

Most prospective hams already know how to read, write, talk and type. Most dod not know any Morse code.

>Notice
>that I'm not asking why a person would want to learn code on their own.

>be mainly focused)?

Some claim that Morse Code testing is at odds with the purpose of the amateur radio service as a fundamentally technical service. But in the practical experience of thousands of amateurs, the opposite is true.

Skill in Morse Code, even at a very basic level, permits amateurs to use radio equipment ranging from very simple to highly advanced designs, and technologies of almost any vintage. Morse Code skill encourages amateurs to actually build their own radio equipment by offering an easy first step, and a growth path that leads to almost any usable technology. It must be remembered that most radio amateurs are self-trained and do not have access to professional level resources. Few amateurs today would consider a single-sideband transceiver as a first project, but the home construction of Morse Code equipment is possible

for almost all amateurs.

I speak from direct experience in amateur radio home construction, having built my first amateur station at age 13. Since then I have built many more projects of increasing complexity, and much of my current amateur radio station is entirely homemade. The construction of my early stations led me to an electrical engineering degree and career. A major factor in that path was being able to start out with very simple but highly effective projects such as a simple Morse Code receiver and transmitter.

The removal of the Morse Code test from the Technician class license has not resulted in a technical revolution in amateur radio from newly-licensed "technically qualified" amateurs. Instead, the continued progress in amateur technical efforts continues to be mostly the result of work done by experienced amateurs, even though the Technician class license has not had a code test for more than 12 years.

Neither side is a monolithic group. There are some very well behaved folks on each side. For example, my friend Bill Sohl, K2UNK, manages to get his points across without being insulting or denigrating to anyone.

I'm proud of the way I've behaved here.

Are you proud of the way you've behaved, Clint?

Using the mode sure does.

>If that is true, then a person who
>passed a code test yesterday is more experienced than a person who got his
>license ten years ago without knowing code, and more experienced than all
>those in the other radio services where code is not used.

No, that's not what is being said.

>More rounded in what?

In the communications methods actually used by radio amateurs. A ham license is a license to operate an amateur station in the amateur radio bands, not to particiapte in other radio services.

> Emergency communications?

To a very small degree. Ask KT4ST - he's been there, done that.

>Moonbounce? Satellites?

A lot of amateur moonbounce and satellite work has been done with Morse code.

> And if a person with
>code was truly more able to provide communications under adverse conditions,
>all radio services would still be relying on code.

No, that's not true.

Other radio services use radio as a means to an end, not an end in itself. Most of them have the complete elimination of radio operators and radio operating skill as a goal. That's why the maritime service phased out Morse code on the high seas - they wanted to save the cost of having radio officers on their ships.

>They aren't. In the end, these are all code myths.

No, they are misunderstandings by those who don't like the code test.

Here, try this one:

"All else being equal, a radio amateur who has Morse Code skills is more experienced, more qualified, and has more radio communications options available than a radio amateur with no Morse Code skills."

Dwight,

Good question!

Here's one answer:

How many hams do you know who have designed, built and operate homebrew stations? Not kits, not partly home-made, not with homebrew accessories, but 100% built-from-scratch amateur radio receivers, transmitters, transceivers, antennas, power supplies, etc.?

One of the oft-repeated claims has been that the code tests kept out "technically inclined" individuals. At least one NCTA (Vshah101) has claimed that "no self-respecting EE would use CW". Etc.

Yet what kind of equipment are these "technically inclined" individuals actually using on the air? If/when FCC dumps Element 1, will we see a lot more homebrew HF stations?

Your source, please? I read the "FCC enforcement letters", and there seems to be a wide distribution of experience, license classes, etc.

One thing is quite obvious, though: the vast majority of enforcement actions are against hams using voice modes. When's the last time a ham using CW in the CW/data subbands was the target of an FCC enforcement action?

>The hams I

He'd also passed several *written* tests on regulations and operating practices. Those written tests didn't stop his behavior either. Shall we dump the writtens because they are not a "yahoo filter" either?

No test can be a perfect "filter".

Ok, Dwight. Very easy. It's not. While the FCC is the regulatory body to whom we answer, they are definitely NOT the sum total of who or what defines OUR hobby/service. We, as amateurs radio operators, are a big part in retaining those element that define our rules, tradition, and culture. This is why the NCTA's battle cry is "well, the FCC doesn't think so" and/or "it serves no regulatory purpose." Sure, the FCC defines the rules and regs to which we're beholden, but as rar as basis and purpose goes...we ourselves have more say in that than you or some other NCI folks appear willing to acknowledge. Calling the 5-wpm exam a barrier is just plain silly and in the end, this crusade to eliminate the test will have a negative effect on the overall quality (NOT quantity) of AR. Frankly, I have much more respect for someone with the stones to just admit that they're too lazy or insufficiently motivated to bother meeting the requirements than all this "regulatory" mumbo jumbo.

> These are exams for a recreational activity with some serious
underpinnings.

Dick, I don't for a moment believe that you (or anyone on this group
with few exceptions) want the hobby to be downgraded or destroyed.
The comment that I was referring to most assuredly does not reflect
that of the majority of Hams (and, coming from an Extra, doesn't lend
much credence to either CW or advanced testing keeping out the
yahoos...;))

Looks to me like the bulk of the disagreement here centers around the
fact that, if and when code goes, what should replace it? Several
schools of thought are clear:

One group believes that it should simply be dropped (like most of the
countries who have removed CW testing have done). There is a problem
with this strategy, or at least a perception here in the group, that
doing this would be bad for the hobby as it will admit many folks who
don't have to put in any extra effort over and above the current
written exam.

Another group believe that CW should be retained - it has great
historical significance, is an excellent operating mode under adverse
conditions, and takes effort to learn - perhaps demonstrating the
commitment of the applicant. CW inherently imposes a civility on
conversation that straight voice does not - it is slower (at least for
me...) than speech, uses standard telegrapher's abbreviations bor
brevity, and does not convey emotion like voice does. It's harder to
have a heated arguement using CW - can be done, but harder ;)
Perlaps in this way the LID-factor is minimized. And sure, it's an
antiquated method of communication in an Internet-wired world - but
voice comminication is much older :)

Yet another group would like to see CW replaced with other testing, again if and when CW is retired. I'm in this category (though not passionate about retiring CW). Additional testing on radio operating practices relating to HF, Smith charts, additional theory or even practical operating tests in various modes have been proposed. This may be the best compromise in ensuring that those who join the hobby are prepared and qualified to do a good job when they get on the air, and well represent the caliber of people in the Amateur Radio ranks.

One obvious problem with the two approaches above (keep CW, add more testing if it goes) is with reciprocal operating agreements with other countries - if the requirements don't align, we could have a situation where foreign amateurs visiting North America would have reduced privileges during their stay here. All global agreements would require renegotiation - a massive task!

There are also several folks here (the WA8xxx initiator of the "hope BPL kills the hobby for the CBPlussers" crap, and hey, Big Al!) whose only purpose it to stir the pot and start fights - and are best ignored.

I'll close with a quote from Clint's post to me last night - something that no one here can argue with, and I wish I had said so well:

"I love this hobby, it's a blast; it has so many avenues to pursue and so many different ways to enjoy it."

Now THAT's the spirit of Amateur Radio!

73, Leo

Furthermore, if the US government wants to give all prospective
amateurs 3 hots and a cot, and a paycheck, for the duration it takes
to learn the code, I'd gladly enroll in the CG Morse Code school.

I think you'll be told "That's different". Somehow, some way, some people are convinced that since they are "right" that civil behavior is not necessary.

Problem is not one of our positions is right or wrong. Its all opinions.

But then it is easier to just lump everyone together into two groups. Then dehumanize them, so that whatever you do is okay, and ends justify means.

Cool!

I saw the ARRL president at a digital conference in Austin TX last month. He
was talking about the need to organize back then, which I took to mean that
they hadn't done so yet. It's good to see that they are doing something
about it.

Computers listening for key words in the mid-60's. Hmmm.

I roomed with a ditty-bopper, he listened to live signals on a real
radio in the 1980's.

I did a little research project on this a year or so ago. No vast
majority of any license class as far as perps go. There were a bit more
of the higher classes, but not significantly so. Techs were real close,
and then there were the unlicensed. I'd have to say there was no
significant difference in the license class as far as rule violations go.

And never will be. There are incompetent and even evil doctors. And yet
they have one of the most rigorous entry requirements there are.

No requirements are needed to operate a transciever on HF. We have to
decide how much knowledge is needed. My only wish is that the
requirements are enough that I know that the person is highly interested
in the service.

I agree with both statements, Larry. And although I admittedly took
them out of context in the above quotes, the two statements are
perfectly capable of standing on their own - as two perfectly good
reasons why there is no longer any need for code testing.

I happen to think it's a case of turf defending...the PCTAs feel they
must defend their exclusive little slices of the RF spectrum at all
costs, regardless of what harm is done to the ARS in the process.
They'll kill the mother to save the baby.

>I submit, again, that the hidden among the fervor for the appreciation of CW
>is the main idea that CW is a filter (no pun intended) to keep people out of
>the ARS.

While this may be true, FCC didn't buy that argument from the PCTAs
with respect to lowering the code test speed to 5WPM during the last
restructuring, and I highly doubt that FCC will buy it this time
around, either.

Now...try asking the PCTAs about refarming the Novice subbands once
there aren't any more Novices around to use them, and make sure you've
got your asbestos pantyhose on when you do it. :-)

>There's two reasons that's bunk. One: no one should be kept out
>of the ARS--let them get their license and stand or fail on their merit.

I think there are definitely people who should be kept out of the ARS,
including some who are already licensed. However, I also think that
the proper way to keep them out is through the self-policing that the
ARS is well known for, along with appropriate enforcement efforts on
the part of FCC - rather than through the use of a testing requirement
that also causes many potentially excellent operators to turn away
from amateur radio.

>Two: it's quite obvious that just because someone's passed a CW test--indeed
>beyond that: that someone operates CW at high speed even--it does nothing
>for proof of being a good ham, more technical ham, or intelligent ham.

Again, FCC did not buy this particular PCTA argument the last time
around. The Commission's response to this, in its Report & Order on
Docket WT 98-143, read as follows:

" We do not concur with the comments alleging that the passing of a telegraphy examination is an indication of the examinee's good caracter, high intelligence, cooperative demeanor, or willingness to cmply with our rules. These traits are also found in individuals who have not passed a telegraphy examination rather that being exclusive to those who have passed such a test."

>Basically, when the "dumbed down" rhetoric is puked back up--we all know
>what the real reason is for the desire of CW testing to stay around: these
>folks believe in its power to filter out folks who act just like them.

Or to filter out folks who don't act like them, and thus do not contribute to the task of holding on to their "turf" in the RF spectrum. What really sticks in their collective craw is that if you go back and re-read the comments in the Report & Order that I quoted from above, the writing is already on the wall for the elimination of code testing pursuant to the petitions for rulemaking that have already been filed with FCC - or should I say, the writing is already on the FCC website:

"We are persuaded that because the amateur service is fundamentally a tchnical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service."

The same document also cites the international requirements as the basis for retaining code testing in Part 97:

"When considering the issue of telegraphy as an examination requirement to obtain an amateur radio operator license, we begin with a number of general principles. First, the Radio Regulations contain certain requirements that an applicant for an amateur radio license must satisfy. With regard to the telegraphy requirement specifically, the Radio Regulations require that persons seeking a license to operate an amateur radio station must prove that they have the ability to send correctly by hand and to receive correctly by ear texts in Morse code telegraphy signals. The Radio Regulations also provide that this requirement may be waived only for an operator of a station transmitting exclusively on frequencies above 30 MHz. In order to comply with the Radio Regulations, our rules require that every class of amateur radio operator license that authorizes privileges below 30 MHz has, as one of the examination elements that an applicant is required to pass or otherwise receive credit for, a telegraphy examination element. The other principles that we consider relevant to examination requirements are that those requirements pertain to the privileges the operator license authorizes and that they constitute the minimum requirements necessary to demonstrate that the control operator of a station can ensure the proper operation of that station."

The Radio Regulations referred to no longer contain this requirement. As for the other two principles that FCC states it considers relevant, Technicians are already authorized full amateur privileges on all the

bands above 30 MHz, with no code test required - so apparently the code test is not necessary to demonstrate that the control operator of a station can ensure the proper operation of that station - and to the extent that the requirements pertain to the privileges the license authorizes, FCC already authorizes Technicians to operate in CW mode on the bands above 30 MHz sans any code testing.

I'd find this mighty discouraging if I were on the PCTA side of this particular discussion, but since I'm not, I'll leave the whining and crying and gnashing of teeth to the PCTAs. :-)

Perhaps you have a short memory, then, Dan. A search of Google or some other UseNet archive would, I'm sure, turn up at least one thread from circa July of this year where at least three of the PCTAs in this NG were claiming exactly that. In fairness, I'll admit that I don't recall you being one of them. Nevertheless, the attitude does exist among some of the PCTAs who regularly post here.

>I know I don't feel that way. However I do feel those that don't play on CW >are missing a major part of the enjoyment they could get from having a >amateur license. But thats their loss not mine.

I feel that those who don't participate in public service work are missing a major part of the enjoyment they could get from having an amateur license. However, I don't go around advocating that hams be required to do so, or that they be tested on their ability to do so as a requirement of obtaining a license.

>If you thank that is imparting a superior attitude, I say Dwight that you >have the problem, not us.

As this pertains to yourself, perhaps. As it pertains to several others in this NG? Hmmm...not quite, sir.

Ummm...Clint...the person you are referring to as "he" happens to be
female. Not that this has any bearing on the discussion, but it just
looks funny calling Dee "he" rather than "she" which is the
appropriate pronoun until such time as Dee decides to have a gender
change operation (probably a highly unlikely event).

Just thought I'd try to set the record straight...

Dick Carroll and WA8ULX are two others who come to mind as having exhibited that attitude. Thinking back a few years, I can think of at least one other who I haven't seen posting here lately...definitely an improvement to rrap!

On the other hand, and in all fairness, there are PCTAs who come to mind who have not exhibited this attitude that I recall. Arnie Macy is one - and I give Arnie credit because I really don't get the sense that Arnie's position with respect to code testing is rooted in anything other than a genuine love of the mode and a desire to see its use continued in the ARS. With many of the other PCTAs in here, I get the sense that there are some other agendas underlying what they post.

Whether I agree with someone's opinion or not, I can respect that opinion if I feel that the person expressing it truly believes that they're doing what they think is best for amateur radio. It's the hams that are taking mean-spirited potshots at fellow hams over this issue who I have difficulty respecting the opinions of, especially when their statements on the subject give me the impression that there are other motives afoot and that they could really care less about what's best for the ARS as long as they get their way.

With all this talk about children vs. adults and superior vs. inferior, I can't help observing that insistence upon getting one's way regardless of the consequences to themselves or others is a personality trait that is generally observed in, shall we say, less mature individuals.

It should also be noted that, to non-hams, this whole argument undoubtedly seems quite childish.

Larry was referring to Peter Liaros, K2RSK, a gentleman who both Larry and myself know personally. Peter happens to be a rather gifted CW operator - this is a guy who can and does operate 40m mobile CW and who is good enough at it that he can do it while driving and not be a hazard to other drivers. Peter undoubtedly would quickly disagree with the notion that *nobody* uses CW anymore, and he would, of course, be absolutely correct.

However, Larry's comment ignored the fact that what I posted was that nobody *else* makes much use of CW anymore - i.e. within government, commercial, military radio use, or anywhere else outside of the ARS...which is also absolutely correct.

Ahem...kindly re-read the quoted material.

Clint called it a welfare program.

I called it a (all together now, class):

>>>>government-subsidized life-support system for an anachronism.

Clint has subsequently elaborated on his comment, citing government
subsidizing of the agricultural industry as one example, demonstrating
that this is in fact what he had in mind as well.

Now, then...once the government has stopped subsidizing the
manufacture and testing of CW operators by eliminating the code test,
how do you think we should reallocate the Novice subbands?

Well, then allow me:

ï¿½97.1 Basis and purpose.
The rules and regulations in this Part are designed to
provide an amateur radio service having a fundamental
purpose as expressed in the following principles:
(a) Recognition and enhancement of the value of the amateur
service to the public as a voluntary noncommercial
communication service, particularly with respect to
providing emergency communications.
(b) Continuation and extension of the amateur's proven
ability to contribute to the advancement of the radio art.
(c) Encouragement and improvement of the amateur service
through rules which provide for advancing skills in both the
communications and technical phases of the art.
(d) Expansion of the existing reservoir within the amateur
radio service of trained operators, technicians, and
electronics experts.
(e) Continuation and extension of the amateur's unique
ability to enhance international goodwill.

The "reality" is that this text is quoted from the FCC rules that
govern amateur radio wherever the FCC regulates amateur radio, which
last time I checked includes where you and I live. That's a "fact" you
can look up on the Internet if you think I quoted Part 97 incorrectly,
or dispute if you've recently moved to, oh, I dunno, Saudia Arabia
maybe. Now, then...

The FCC R&O on the last round of restructuring said the following (and
you can also look this up on the Internet if you think I'm misquoting
the FCC's R&O):

---
30. Based on our review of the record, we are not persuaded by the arguments of those commenters opposing reduction or elimination of the emphasis on telegraphy proficiency as a license requirement in the amateur service.

<snippage>

We are persuaded that because the amateur service is fundamentally a technical service, the emphasis on Morse code proficiency as a licensing requirement does not comport with the basis and purpose of the service. We note, moreover, that the design of modern communications systems, including personal communication services, satellite, fiber optic, and high definition television systems, are based on digital communication technologies. We also note that no communication system has been designed in many years that depends on hand-keyed telegraphy or the ability to receive messages in Morse code by ear. In contrast, modern communication systems are designed to be automated systems. Given the changes that have occurred in communications in the last fifty years, we believe that reducing the emphasis on telegraphy proficiency as a licensing requirement will allow the amateur service to, as it has in the past, attract technically inclined persons, particularly the youth of our country, and encourage them to learn and to prepare themselves in the areas where the United States needs expertise.

<snippage>

We also note that most amateur radio operators who choose to provide emergency communication do so, according to the amateur radio press, using voice or digital modes of communication, in part, because information can be exchanged much faster using these other modes of communication. Further, we note that in traditional emergency services, such as police, fire, and rescue, there is no requirement that emergency service personnel hold amateur radio licenses or any other license that requires telegraphy proficiency. We conclude, therefore, that telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications.

I repeat what I posted earlier this evening in response to a post from aomeone else in this NG: The writing is already on the FCC's wall for elimination of the code test. The petitions (seven of them, I believe) for rulemaking have been filed with FCC (including one by the NCVEC whose input seems to have had considerable influence on FCC's decisions with respect to the last restructuring) to eliminate the code test.

So rather than wonder why Dwight is attaching significance to all of this, I have to wonder why you and other PCTAs are trying to ignore

the "fact" that FCC did not buy your arguments about this the *last*
time around. What makes you think the same arguments are going to do
persuade FCC *this* time around?

In fact, it looks to me as if the code test has one foot out the door
and the other on a banana peel, whether you or I or anyone else likes
it or not, so this entire debate in rrap is rather pointless. Let's
find something worthwhile to discuss in this NG...like for example,
how do we refarm the subbands once there's no longer any need for 'em?

The only facts that are truly relevant are the facts about what FCC's
decision will be with respect to petitions for rulemaking on
eliminating the code test.

One need not wade through the clumsy web-based interface at Google in
order to get a pretty good idea of what FCC's view might be. One need
only review FCC's report and order from the last time around.

If you'd like, I can post it for you, in its entirety and without
comment or snippage.

Since it is FCC that will make the decision in the end, that's pretty
much the only "relevant facts" anyone ought to need on the subject.

That doesn't seem to be how the FCC (which is where the final decision
on code testing will come from) views it:

"We note, moreover, that the design of modern communications systems,
including personal communication services, satellite, fiber optic, and
high definition television systems, are based on digital communication
technologies. We also note that no communication system has been
designed in many years that depends on hand-keyed telegraphy or the
ability to receive messages in Morse code by ear. In contrast,
modern communication systems are designed to be automated systems.
Given the changes that have occurred in communications in the last
fifty years, we believe that reducing the emphasis on telegraphy
proficiency as a licensing requirement will allow the amateur service
to, as it has in the past, attract technically inclined persons,
particularly the youth of our country, and encourage them to learn and
to prepare themselves in the areas where the United States needs
expertise."

>she knows how to look into a mirror and see a lost cause.

Now if only you'd follow suit, look into the FCC's report and order
from the last restructuring, and recognize what a lost cause it is
trying to retain a testing requirement that should have been
eliminated 25 years ago and will soon be eliminated regardless of how
may times the same arguments that didn't work last time are retyped
and refiled with FCC this time.

Qouth the FCC:

"We believe that an individual's ability to demonstrate increased
Morse code proficiency is not necessarily indicative of that
individual's ability to contribute to the advancement of the radio
art. As a result, we find that such a license qualification rule is
not in furtherance of the purpose of the amateur service and we do not
believe that it continues to serve a regulatory purpose."

Yeah, I'll repeat:

"...such a license qualification rule is not in furtherance of the
purpose of the amateur service..."

If you'll be so cooperative as to tell us which part of that you have
difficulty comprehending, we'll try to help you.

I'm not sure that the majority of CW users in the ARS shares the
zealousness that some of the PCTAs in here do. Unfortunately for
amateur radio, though, just as the squeaky wheel gets the grease, so
too do the most vocal among us tend to be the ones who are noticed by
the rest of the hobby radio community - and equally unfortunate for
the ARS is the fact that...well...shall we say, certain disgusting
substances...splatter when thrown at a specific target, causing what
the military refers to as "collateral damage."

The code test will soon vanish, and then hopefully we can get around
to the business of repairing the collateral damage that's been done to
the ARS in the process.

Obviously, you weren't a regular participant in this NG back in
1999-2000 when the FCC eliminated the 13WPM and 20WPM code tests.

If you go back and read their Report & Order from that action, you can
see that the writing has been on the wall for a complete removal of
code testing ever since. The last three years of quoting and requoting
the same drivel - on both sides of the issue - has been nothing more
than a diversion for its participants, myself included. The fact is
that unless FCC does a complete 180 on it this time around (and
there's really no reason to expect that it will), the code test is
already dead and is just waiting for the doctor to sign the death
certificate so that the undertaker can wheel the corpse away for the
wake and subsequent burial.

The wake will undoubtedly be held here in rrap, where many will call
it the end of ham radio (at least half a dozen other significant FCC
actions over the past 50 years were also termed to be "the end of ham
radio") and will continue to flame everybody in sight, especially the

newcomers to the hobby and the people who will upgrade from no-code Techs to General and Extra without the hindrance of a code test. No matter how many no-code HF ops make DXCC, they'll continue to read the same "Know Code, Know Ham -- No Code, No Ham" crap that's been posted on UseNet since the dawn of personal computers.

Childish? Yes, certainly...and the temper tantrums thrown by children who sense they aren't about to get their way is usually nothing compared to what happens when that suspicion is confirmed.

Fortunately, there are many others who have cooler heads and who will continue to value their participation in the ARS whether it has a code testing requirement or not. In time, their actions will influence most of the tantrum-throwers to wipe the tears from their eyes and see the light, and then ther majority of hams will return to the time-honored practice of extending appropriate respect to fellow hams regardless of license class or particular interests within the hobby...because in the final analysis, whether you're talking CW, phone, PSK31, SSTV, or operating model RC cars and airplanes with black flags on 'em, it's all ham radio.

> >Sadly, the pro-coders don't even seem to realize that all this is their

I'm sure this applies to many, in this NG and out. In fairness, I must say that I don't think it applies to all, or even to a majority. If I did think that, I'd be tempted to return my license for cancellation rather than to give the impression of being a part of it. Bottom line though - I think most hams (on both sides of this debate) are above the nonsense that you refer to...and that's definitely a good thing, because I think the ARS is going to need the leadership of those with the cooler heads if we see a significant influx of newcomers to the hobby as a result of the elimination of the code test (and I think there's a very good chance that we will see such an influx). Those who are willing to accept them as fellow hams and welcome them into the fold and pass along the knowledge they'll need to help them grow in the hobby will be doing what ought to be done. Those who talk down to the newcomers, referring to them with the same variety of derogatory names that we see used here in rrap, well, I hope they won't act that way on the air too...I hope they'll think about what's best for the ARS and set a better example than that for the newcomers to follow.

>And on that point i'll agree with you totally, 100%. Within this newsgroup,
>as you said, they not only do NOT inspire any sort of good will feeling or give

>ideology.

Well, that strikes me as perhaps a little bit of naivety (sp?) at work
there, because common sense dictates that if you get any sizable
enough group of people together, you're going to have people of widely
varying ideology and personalities in the mix. One should not be
surprised to find this to be the case.

What should be considered surprising is that any ham, regardless of
his/her personal interests or license class, should value amateur
radio so little as to stoop to placing their own selfish agendas ahead
of what is in the best interests of the ARS.

On the other hand, since I'm the one who keeps repeating that common
sense isn't really so common, perhaps I shouldn't find this so
surprising either.

>It's very sad. If the old gaurd hasn't understood or seen by now
>that the mentality of "you're a child and stupid, you need to do what we say"

>fundamental error that is resident within them, and that is THIS... a continued agenda
>such that they uphold will do far more to destroy ham radio than any change in
>testing requirements OR indirect problems (such as the current BPL
>controversy) will EVER do.

Well...in some cases that's just it, they don't want to attract new
hams, because new hams means more competition for the use of the
exclusive slices of the RF spectrum that the "old guard" you refer to
enjoys the use of. This certainly does not apply to everyone - I know
some guys who literally have been licensed hams longer than I've been
alive, and I don't think they have that attitude - but I agree that
every ham who does display that attitude is doing a disservice to the
ARS and to those of us in the hobby who try to look out for what is in
the best interests of ham radio, even if it means we sometimes have to
compromise what's best for ourselves.

>I have tried my darndest do continue to post, for the benifit of the

>bloated but passionate words I have repeated just what you have.

>
>The PCTA have themselves to blame.

Only the ones who do so for their own selfish reasons, rather than doing it because they honestly believe it to be the correct thing to do. This does not, and is not meant to, excuse insulting fellow hams (especially in a public forum such as UseNet that is open for perusal by hams and non-hams alike)...I simply mean to say that it's one thing for someone's beliefs to differ from another person's, but it's entirely another thing for someone to ignore what they know is right because there's more benefit in it for themselves to go that route.

Often in life, what we say is less important than the way we say it. There's plenty on both sides of this debate who are, or have been, guilty of failing to recognize that. There are also folks on both sides of the debate who've been able to resist the temptation to get frustrated with the folks on the other side and open fire with both barrels. While I must disagree with their opinions, I can at least respect them as fellow hams and tip my hat to 'em for keeping it on an appropriate level.

As for those who can do no better than to hurl insults and derogatory names at anyone who doesn't share their own views, I can only take solace in the fact that their own actions will most likely preclude them from ever becoming leaders in the amateur community...and as far as I'm concerned, that's definitely a good thing, because leadership like that we can do without!

>My $.02 worth

And I, for one, thank you for it, Clint...you catch a lot of BS from some corners in rrap because people here like to trip others up on the least little error, but I think you're heart is in the right place, and that's the most important thing.

>those of us who were.

Back in the days when I was on Fidonet (fight-o-net), I frequented
CIVLIB and some of the other echoes where the gun control debates were
going on, this being around the time when Chuck Shumer and Dianne
Feinstein were perpetrating the Brady Bill and Sarah Brady was running
Handgun, Inc. with the intention of abolishing all private ownership
of firearms in the U.S.

The only radio-related echo I was reading back then was the SCAN echo,
where the late Bill Cheek was the moderator at the time, so I'll have
to take your word on who threw the first slings and arrows.

However, a few weeks ago I happened to be having lunch near a local
high school just as the students were heading home from school, and I
saw two boys get into a fistfight. It started with a smart remark from
one of the boys aimed at another. The recipient replied in kind.

There followed several iterations of, "Oh yeah?" "Yeah!"

Next came a push...then a shove...and eventually the first punch was
thrown. The fight lasted about a minute, with no clear winner,
although both participants ended up with bloody noses, their clothes
were pretty messed up with mud and grass stains and blood all over
them - not to mention a hefty helping of dog droppings since the lawn
they picked to have their fight on belonged to the owner of a large
Irish Setter - and so by the end of the affair, they both looked (and
undoubtedly smelled) pretty disgusting.

It occurred to me that if, at any point during the events leading up
to the first punch being thrown, either one of the two boys had
decided he was above this sort of thing and walked away from it,
neither of them would have ended up smelling like dog dung. Too bad
for them that neither of them was smart enough to do that, or at least
to suggest that they pick a cleaner lawn to fight on. Since neither of
them did, they both share the responsibility for the fact that they

both came up looking and smelling like s**t, no matter which of them tossed the original smart remark that started it all.

If it seems to you that I am drawing a parallel between this fistfight between two schoolboys and the behavior of some of the participants in this debate, it's because I am...and matters are compounded by the fact that this is not an isolated incident between two boys in a suburban city in the Northeastern U.S., it's right out here on the Internet for the whole world to see...and smell.

Originally, they didn't. The first proposal to institute a no-code
class of license (that could have been debated on a computerized
network such as Fido) was the Communicator Class license back in the
mid-1970's. That proposal was shot down, largely on opposition from
ARRL, and we didn't get a no-code license in the ARS until 15 years or
so later, by which time two generations of technically inclined young
people had found other things to do for a hobby instead.

> Come on BPL let me be the first customer.

You'd sign up in a heartbeat, too, I'm sure. After all, you signed up
for AOL...

> THANK GOD FOR BPL.. How about us starting a "No-Code BPL Group"?

Go ahead, Bruce, start one. You can be the President, CEO, chief cook
and bottlewasher, and primary spokesperson of the largest ham radio
organization in support of BPL in the entire world! Why, with your
writing skills and well-demonstarted talent for public relations,
there's no doubt in my mind that you'll manage to get BPL accorded
every bit of the acclaim it so richly deserves.

Don't forget to start a BPL conference on AOL while you're at it,
Bruce - I'm sure the pre-pubescent chatroom dwellers on AOL will grow
up at a severe disadvantage unless they have you around to lead them,
and to teach them proper spelling and grammar skills, too.

In fact, you're a shining example of the finest that ham radio has to
offer, Bruce. I'm sure everyone who reads your posts to this newsgroup

is inspired to go out and get a ham ticket just on the off chance that someday they might be able to put your call in their logbook. If you're an ARRL member, perhaps you should run for section manager next time around. I'm sure the ranks of ARRL members in your section will swell to unprecedented numbers with your leadership.

In the seven years I've been on Usenet before now, I have only killfiled two persons. Congratulations on being the third.

That's what my father told me at the time (and I have no reason to doubt what he said). Of course, I was too young to know much about it (maybe about 12-13). I do remember the terminal in the bedroom and going to the building several times. I also remember the antennas (dozens of large vertical antennas in two circular patterns, a large outer circle and a smaller inner circle). You could see those antennas from anywhere on the base. There was also a large collection of smaller antennas. I also remember a little of what that equipment looked like inside the building, but obviously not any of the details.

Musta caught me at an inference-compromised moment, Kim. It wasn't
clear to me when I read it.

However, you have since rectified the ambiguity, so that the statement
would now read something like:

"NO ONE who has passed the required tests should be kept out of the
ARS"

How's that?

> of the required qualifications, no more, no less.

That's your point, Carl, not my point.

The original story told how, back in 1978, the whole class of CG folks
went down to FCC and became Extras, while today none of them did.

My point was simply that there are significant differences between the
1978 and 2003 situations, such as:

- the 1978 class was 'required' to take the test, and means provided
to do so (do you think they went on their own time? used their own
transportation? paid any fees?).

- the 1978 class had already learned all they needed to know to pass
the 1978 tests.
>

> If someone already has the knowledge to pass the tests, fine.

You can't change that situation anyway.

> There is no "value added" in "making them work for it"

Who said there was? The point is that the 1978 class had a completely
different situation from the 2003 class.

> ... if
> they have the knowledge they are qualified, period.

So would you agree with Kim that anyone who can pass the required
tests should be allowed into the ARS?

>(and likely
> they worked for it or they wouldn't have the knowledge anyway,
> so the logic of "making them work (more)" fails)

It is a fact of human nature that most people value a thing more if it
took some investment of themselves to acquire.

Dwight, given Bruce's many posts here over the past few years, I cease
to be amazed by anything he writes. Occasionally I am amazed at my
ability to decode what he has written....

> Millions of people with no CW/code
> skills have been using HF for decades. Of course, none of them (CB'ers) are
> members of the licensed ham radio community.

Are they the model we hams should follow, or should we take them as a
cautionary tale of what could happen to us?

This is not a trivial question. FCC created 27 MHz cb for a definite
purpose, but they quickly lost control of it to the point. The FCC of
1958 could not imagine that people would just ignore the rules to the
point that enforcement of said rules became impossible.

Why did rule-breaking on 27 MHz become the norm rather than the
exception?

> Instead, a couple hundred
> thousand Technicians did the right thing and "earned" a license

Why the quotes around "earned"? Anyone with a valid amateur radio
license earned it. (Licenses issued as a result of cheating are not
valid, of course, and FCC will invalidate them if sufficient evidence
of cheating is presented).

> to join the
> ARS, all without being offered even the basic HF operating privileges of an
> unlicensed CB'er.

Let's see.....cb user gets a couple of watts on 40/80 channels and two
modes (SSB and AM). Tech gets up to 1500 watts on every amateur band
above 30 MHz, if you just count the most commonly used modes (CW, FM,
SSB, AM, RTTY, packet, APRS, SSTV, FSTV, PSK-31, DSSS, FHSS, more TOR
modes than I can recall, fax, data,.....

Also satellites, repeaters, remote control, remote bases, and a bunch of other stuff.

Plus almost any new mode or technology that a ham can dream up, implement and document to the FCC.

Now which is the better deal?

I can more or less shrug those, what really irks me is the complete
lack of understanding of the cultures in the mideast and points east
and the implications of those cultures as they relate to attempts to
impose western style democracies in those countries by force of arms.
One of the bitch points on Dubya when he was running against Gore was
that he's utterly clueless in the field of foreign policy. Bingo.
Welcome to Tikrit.

> Quagmire? What did Dan, W4NTI predict here some time back?

Seconds after we watched the second tower collapse I asked my brother

On 30 Sep 2003 17:23:26 GMT, wa8ulx@aol.com (WA8ULX) poked his head out of the killfile somehow to stir the pot with the following negativity:

>You can fight all you want, if that makes you fell better. But Big Money is >controlling this, and 1800 comments fron a bunch of Hams is nothing.

Well,

As Yogi Berra once said - "It ain't over until its over..."

One question, though - would it be too much to ask for you to perhaps get on board with the rest of the Amateur community and work with us to fight this issue? We may lose, but to just give up would be much worse than fighting it. 1801 comments is better than 1800...

As an alternative, could I respectfully suggest that you transition to your replacement hobby early - we've heard as much whining and negativity as should be expected for the average group of humans to endure....

....unless of course trolling is your new hobby ;) - in that case, could you please torture another group? alt.whine or alt.troll, perhaps?

/ return to killfile

Not really - read the message I replied to - the reply was just following the thread. (you know, replying to the content and in this case the criticism of *my* spelling in the message one up from this one.....). It was a bit of a cheap shot, I admit - the result of fighting fire with fire, I suppose.

As far as I'm concerned, the differences that Clint and I have had have been amicably resolved - we now know exactly where each other is coming from, and why - and peace reigns once again. We may not agree on all points - but we do share common ground, as do the majority of us in the group: see the thread "The Way To Stop BPL" for further details.

Beating each other up isn't going to resolve anything...there are issues we all need to stand together on. Some (like the famous Code / No Code question) simply have no right answer - and others (like BPL) threaten the hobby. Perhaps if we channel all of our energy where it will do the most good for the hobby, we can effect change.

I've been trying to figure out who would have enough money to buy, and
the talent to make use of, the 1960's computing resources needed to do
real-time Morse decoding in any volume. The list of possibilities is
really, really short.

I know of a not-small number of advances in Information Theory and
Cryptography where it took independent academics several decades to
(re)discover what the NSA already secretly knew. I've also always
thought that people who assume the performance of available commercial
decoders on hand-sent Morse is an indication of the state-of-the-art in
what is possible are also making a big mistake, though this is a topic
of such decreasing relevance that independent researchers will likely
never get around to reproducing what may have been possible years ago.

> 73 de Jim, N2EY

I think this is precisely why some people argue so vociferously for code tesing despite the lack of any logical arguments for retaining it. That is to say, they value it because it's hard instead of because it's necessary (which it isn't!!!).

73 de Alun, N3KIP

I had been skipping over some of the "KC2HMZ" posts, mistaking
them for Bert...But NOW I remember why "HMZ" was familiar!

I find it unique that John takes the "turf defending" position
and makes the humorous suggestions about "kill the mother to save the
baby".

John was the listowner of an e mail reflector that used to "ban"
members from who didn't heel to his particular viewpoints and
opinions.

Unique how people who like to prevent others from expressing an
opposing viewpoint will jump on others for doing (allegedly) doing the
same thing.

How ya been, John?

Is it really too much to ask that 'phone operators learn and be able to use 26 standard words for a test, even if they don't absolutely have to use them on the air?

oh wait - somebody asked that question about the 43 morse code symbols...

No "scathing attacks" or "passion-filled" ideas here, Clint.

My tit-for-tat with Lennie and Brain is based solely upon what
THEY supply. I don't need to make any of it up.

You're getting there.

> > Practical experience dictates otherwise, but hey...When it COMES
> > to facts and practical expereience, that's where the Lennie Crowd

Ahhhhh...I seeeeeeee...."passion filled" only applies to those
who find themselves in Clint's crosshairs.

Taking Lennie's "If Ya Can't Beat Them, Correct Their Spelling
Errors" tangent, I see.

If I spell it "ekspyryance" the facts are still such that
Lennie's a liar, Brain says the liar is his mentor, and now you want
to join them...

What does that say about you, Clint?

Just curious.

by that logic, most of the General and Extra written exams are also
"government-subsidized life-support system for an anachronism" and/or
"a welfare program".
>
> Clint has subsequently elaborated on his comment, citing government

> subsidizing of the agricultural industry as one example, demonstrating

What major industry in this country is *not* subsidized in some way?

> Now, then...once the government has stopped subsidizing the
> manufacture and testing of CW operators by eliminating the code test,
> how do you think we should reallocate the Novice subbands?

Reallocate them as special digital experimental subband. Allow any documented digital mode that will fit in the subbands to be used there. Including digital voice, image, and yes, Morse Code/CW. No arbitrary limits on occupied bandwidth or symbol rate as long as the signal fits inside.

If somebody wants to run "PSK-3100" and they can document it for FCC, fine, let 'em have at it.

Meanwhile, give the Novices and Tech Pluses more HF space than those four little slots.

As demonstrated by Bruce, Len and a host of others on both sides.

> Problem is not one of our positions is right or wrong. Its all opinions.

I disagree. Some positions *are* simply wrong. For example, polluting
the electromagnetic spectrum with BPL noise when many other, better
technologies exist is simply *wrong*.

Other positions, like the code test thingie, are really all about
opinions and nothing more.
>

Hey, I think I've heard of John! Does he run the E-mail lists at TAPR? They ban hams who don't go along with the TAPR "party line". They even banned Hank Oredson W0RLI, who more or less invented packet BBS's and most of the operating standards for them - from the TAPR BBS special interest group! Hank offended TAPR by suggesting that hams use radio to communicate.

I dunno.... Maybe I'm getting him mixed up with John Ackerman. It was some kind of "John", anyway.

Remember too that HF violations are usually audible over a much wider
area than VHF/UHF violations. The W6NUT machine is a local/regional
problem, while 3950 and 14313 are much more widespread.

How many of the enforcement actions were against hams using CW in the
CW/data subbands?

Hard to measure "interest".

Fun fact: a few years back, the FCC modified a General class ham's license as part of an enforcement action so that he was limited to using CW only.

Exactly. Bert's comment underscores the core of many who don't
give a hoot about having requirements that make sense...they only
want requirements which, by their measure, constitute a "show
of effort" on the part of all applicants. Sorry...but such a desire isn't
any part of FCC's Part 97 Purpose.

Cheers,
Bill K2UNK

Perhaps you grew up in a different area, John. When I was a kid, we moved to a different little town. I was getting picked on by some of the kids, a lot of it in places where I *couldn't* walk away.

My parents always told me that it "took a bigger man to walk away from a fight". In a backward way, they were right, as I had to be pretty brave to get my dose of punches, kicks and rock dodging every day.

Then one day, I decided *no more*, and shall we say, surprised the first kid that came after me. It cost him and myself an expulsion, but I made enough impression on the bullies that I had no more trouble from them.

I don't think the Bully analogy is quite apt.

Jim, you really need to retire this old mantra.

'It is a fact of human nature' that real people don't value a thing
based on it's 'investment' or 'cost', but rather based on the
usefulness, utility, comfort, satisfaction, or enjoyment that comes
from having it.

My amateur license cost me virtually nothing in terms of 'investment
of myself', and the curbs and gutters the city just installed at one
of my places cost me an $8,200 assessment. I value my amateur license
a LOT more than I value the city's new street curbing!

The things that I value the very most quite honestly are literal gifts
which I have recieved without an ounce of 'investment' or 'cost' ---
the love of my wife, the smiles of my grandkids, the whisper of the
wind at sunset on Lake Vermilion, the conversation with an old friend,
or my healthy heart. I value all of these more than my homes, my RV,
my boat, or the QSL collection in the closet.

With all kind wishes,

de Hans, K0HB

It is the fact that people think certain things are "implied" that keeps the lawyers mighty busy. These days, if something isn't stated, it isn't considered part of the meaning or intent of the passage.

Bill, I give a great big hoot about the regulatory stuff. I assume you're
referring to the regulatory stuff wrt "making sense," since you appear to
discount any form of testing which serves no "regulatory purpose." Exchange
"only" with "in addition to" and we're in agreement. ;-)

This is what my whole argument comes down to, Jim. There is ample evidence that a person, even one who is less clever than most, can put up a station, run some serious power, and come to no harm. People do it on the 11 meter band all the time.

Even on the Ham bands, a person can buy a modern rig, pay people to erect his or her antenna, and be on the air without doing anything but reading the manual.

Things are not what they used to be.

That some people like to homebrew can be considered as irrelevant now as the fact that some people like to use Morse Code CW. A person can use the argument that "If a person likes to build their own equipment, that's fine, but a person shouldn't have to be forced to test for electronic theory. Why should a person have to know Ohms law when they just want to run SSB or computer soundcard modes"?

In fact, modern radios could simply not allow themselves to transmit out of band, (some may already do so) so who needs to know band edges? Another thing not needed to test for.

Nothing is a foolproof filter, but the tests serve as one, both written and Morse proficiency tests.

While some decry this as an elitist thing, it is no more so than any testing regimen. We take tests to get into schools, graduate, drive a car, and do many things in life.

I'm not talking about the Morse code test specifically - for the purpose of the argument, throw it out and to hell with it.

What I am talking about is that we are at a juncture where we can go one of both ways. We can toss the whole thing, and actually just have people buy their licenses, or we can have some sort of minimal testing, or we can have some meaningful testing, where the person demonstrates some sort of proficiency and interest and has to put in some sort of work to get their ticket. Some might also want the prospective ham to be the equivalent of an RF engineer.

It's a whole spectrum of opinions.

Oh the horror!!! ;^)

And here I agree with you, Alun. Now, where do we draw the knowledge line?

Well since there are still people who hold Novice licenses, we ought to keep them as is. Otherwise the current Novices (who can renew until they die) will be losing privileges. Normally rule changes attempt to be done in such a manner that current licensees neither gain nor lose privileges other than those very specific to the rule being changed. I.e. dropping the code test would not eliminate the Novice or any other class. If the simplest approach is taken to this change (simply dropping the code requirement), we would actually have an immediate increase in people with access to the Novice subbands as all Techs, not just Techs with code, would now be able to operate there. So this should increase the need to keep these bands allocated to the Novice/Technician groups.
